Sandra Kahn, Paul R. Ehrlich

Jaws Sandra Kahn, Paul R. Ehrlich, 2018-04-10 There's a silent epidemic in western civilization, and it is right under our noses. Our jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. *Jaws* will change your life. Every parent should read this book.

The Mammalian Jaw Walter Stalker Greaves, 2012-07-19 Mammalian skull structure is notably diverse; however at a basic level the jaw mechanism is remarkably similar, if not essentially the same, in the majority of mammals. Using simple models that are compared with real animals at every step, this book examines the basic structural features of the mammalian jaw mechanism from a mechanical point of view. It explores how the mechanical constraints placed on the jaw have contributed to the evolution of an efficient basic structure, used by many mammals, which precludes mechanical difficulties and uses a minimum amount of bone tissue. Throughout the book the emphasis is on conceptual understanding, with explanations linked together to form a complete story that can be

applied to both fossil and extant mammals. Summarising over forty years of research from one of the leading pioneers in 3D jaw mechanics, this is a must-have for anyone interested in mammalian jaw morphology.

Jaw Musculature of the Mourning and White-winged Doves Robert L. Merz,2021-04-25

For some time many investigators have thought that the genus Zenaida, which includes the White-winged and Zenaida doves, and the genus Zenaidura, which includes the Mourning, Eared, and Socorro doves are closely related, perhaps more closely than is indicated by separating the several species into two genera. It is the purpose of this paper to report investigations on the musculature of the jaw of doves with the hope that, together with the results of other studies, the relationships between the genera Zenaida and Zenaidura can be elucidated.

Injuries of the Face and Jaw and Their Repair P. Martinier, 2018-02-10 Excerpt from *Injuries of the Face and Jaw and Their Repair: And the Treatment of Fractured Jaws* The suggestion that artificial substances should be used for filling the hollows left by frontal Sinus operations (p. 229) is not likely to find general favour among rhinologists. It will hardly be believed that the results are as good as those of, for instance, the radical method of Killian, whose bridge Operation avoids any deformity. It will please many readers that the

method of paraffin injection is damned with faint praise (p. Indeed, for reasons familiar to rhinologists, this practice is, in Great Britain at any rate, not much followed now. Its dangers are out of all proportion to the probability of a permanent good result. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
