Takewing a.m. Brenda J. Wilson, 2018-12-03 At the heart of this fictional work of survival is one of the most spectacular life cycles on earth, that of Danaus plexipus or the Monarch Butterfly. As this iconic insect's annual migration dances to the tune played by the weather, so does the North American plot alternate between the mountains of Central Mexico and rural Eastern Ontario, Canada. Two families, the Santanas and the Desjardins are brought together by their love of this tiny creature. Over the twelve months from November 2010 to November 2011, the monarchs migrate between their two countries, just as they have for millennia. More than ever, they have become a beacon of hope for all that is beautiful and fragile in our world. Like the "canary in a coal mine", the monarchs hover between survival and extinction. Threatened by extreme weather, deforestation, and the degradation of their food sources, these environmental concerns make up the fabric of this book. Other threads in the story are the technologies that invade our privacy under the guise of public safety and security. Since Rachel Carson's

Silent Spring, the unbridled greed and avarice of immense international agrochemical companies continue. Bent on leaving our world a toxic wasteland with all the attendant diseases, cancer strikes down the story's young protagonist, Anne Desjardins. Gone are her carefree and pastoral days of hayrides, bird's nests and clear blue skies. It will take more than just a medical breakthrough to deliver her from her health crucible and "slip the surly bonds of earth". In order for Anne to survive, it will take the far more powerful forces of courage, friendship, and love to turn the tide and help to bring this tale to its hopeful conclusion. As the story ends, two young lovers share their first kiss under the Mexican stars.

Safety in Aviation and Astronautics Simon Ashley Bennett, 2021-11-25 Aviation safety and astronautics safety are taught as technical subjects informed, for the most part, by quantitative methods. Here, as in other fields, safety is often framed as an engineering problem requiring mathematics-informed solutions. This book argues that the socio-technical approach, encompassing theories grounded in sociology and psychology – such as active learning, high-reliability organising, mindfulness, leadership, followership and empowerment – has much to contribute to the safety performance of these vital industries. It sets out to inspire professionals to embed the whole-system approach into design and operation regimen and describes the reputational and financial benefits to manufacturers and operators that accrue from adopting a whole-system approach to design and operation. The book defines the socio-technical approach to risk assessment and management in aviation and astronautics (astronautics is taken to mean the design and operation of vehicles for use beyond the earth's atmosphere), then demonstrates the strengths and weaknesses of this approach through case studies of, for example, the Boeing 737MAX-8 accidents and the loss of the SpaceShipTwo orbiter. Grounding the discourse in familiar case studies engages busy aviation and astronautics professionals. The book's arguments are explained in such a way that they are readily comprehensible to non-experts. Key concepts are defined within a glossary. Photographs, charts and diagrams illustrate key points. Written for a practitioner audience, specifically aviation and astronautics professionals, this book provides a valuable and accessible social sciences perspective on safety that will be directly relevant to their roles.
