Keyword Search in Databases Jeffrey Xu Yu,Lijun Chang,Lu Qin,2022-06-01 It has become highly desirable to provide users with flexible ways to query/search information over databases as simple as keyword search like Google search. This book surveys the recent developments on keyword search over databases, and focuses on finding structural information among objects in a database using a set of keywords. Such structural information to be returned can be either trees or subgraphs representing how the objects, that contain the required keywords, are interconnected in a relational database or in an XML database. The structural keyword search is completely different from finding documents that contain all the user-given keywords. The former focuses on the interconnected object structures, whereas the latter focuses on the object content. The book is organized as follows. In Chapter 1, we highlight the main research issues on the structural keyword search in different contexts. In Chapter 2, we focus on supporting structural keyword search in a relational database management system using the SQL query language. We concentrate on how to generate a set of SQL queries that can find all the structural information among records in a relational database completely, and how to evaluate the generated set of SQL queries efficiently. In Chapter 3, we discuss graph algorithms for structural keyword search by treating an entire relational database as a large data graph. In Chapter 4, we discuss structural keyword search in a large tree-structured XML database. In Chapter 5, we highlight several interesting research issues regarding keyword search on databases. The book can be used as either an extended survey for people who are interested in the structural keyword search or a reference book for a postgraduate course on the related topics. Keywords John Patrick Leary,2019-01-08 “A clever, even witty examination of the manipulation of language in these days of neoliberal or late stage capitalism” (Counterpunch). From Silicon Valley to the White House, from kindergarten to college, and from the factory floor to the church pulpit, we are all called to be innovators and entrepreneurs, to be curators of an ever-expanding roster of competencies, and to become resilient and flexible in the face of the insults and injuries we confront at work. In the midst of increasing inequality, these keywords teach us to thrive by applying the lessons of a competitive marketplace to every sphere of life. What’s more, by celebrating the values of grit, creativity, and passion at school and at work, they assure us that economic success is nothing less than a moral virtue. Organized alphabetically as a lexicon, Keywords explores the

history and common usage of major terms in the everyday language of capitalism. Because these words have infiltrated everyday life, their meanings may seem self-evident, even benign. Who could be against empowerment, after all? Keywords uncovers the histories of words like innovation, which was once synonymous with “false prophecy” before it became the prevailing faith of Silicon Valley. Other words, like best practices and human capital, are relatively new coinages that subtly shape our way of thinking. As this book makes clear, the new language of capitalism burnishes hierarchy, competition, and exploitation as leadership, collaboration, and sharing, modeling for us the habits of the economically successful person: be visionary, be self-reliant—and never, ever stop working.

Keywords: A Community of Inquiry, 2018-02-13 An irreverent critical lexicon of academic life and culture The university: The very name evokes knowledge, culture, and the magnificently universal ambition at the heart of this essential institution. Bastions of free inquiry and a free society, engines of social transformation and economic progress, enclosed gardens of ennobling reflection and creation, universities encompass the wisdom of the past and the hope of the future. Or do they? This critical glossary—written by a group of Princeton graduate students and faculty—defines fifty-eight terms common to academic life in a style that will prick both egos and consciences. From “academia” to “vocation,” “canon” to “peer review,” “discipline” to “methodology,” the book scrutinizes the often stultifying structures of modern disciplinary life, calls out a slavish devotion to “knowledge production” as the enemy of thought, and even dissects the notion of “academic excellence.” Feisty and darkly funny, passionate and deeply insightful, this book raises hard questions about teaching, research, theory, practice, and academic labor. The result is a must-read dispatch from today’s academic trenches—one that is sure to provoke discussion and debate.

It updates some 40 of Williams's original entries and adds 86 new entries, ranging from access to youth. The book is both a history of English, documenting important semantic change in the language, and a handbook of current political and ideological debate. Keywords in the Press: The New Labour Years Lesley Jeffries, Brian Walker, 2017-11-16 Building on Raymond Williams' iconic *Keywords* released in 1975, Jeffries and Walker show how some pivotal words significantly increased in use and evolved in meaning during the years of the 'New Labour' project. Focussing on print news media, this book establishes a set of socio-political keywords for the 'Blair Years', and demonstrates how their evolving meanings are indicative of the ideological landscape in Britain at that time, and the extent to which the cultural hegemony of the New Labour project influenced the language of the commentariat. Combining corpus linguistic approaches with critical stylistics the authors conduct

an analysis of two newspaper corpora using computational tools. Looking closely at textually-constructed meanings within the data, their investigation of the keywords has a qualitative focus, and sets out a clear methodology for combining corpus approaches with systematic co-textual analysis.

Digital Keywords Benjamin Peters, 2016-06-07 How the digital revolution has shaped our language In the age of search, keywords increasingly organize research, teaching, and even thought itself. Inspired by Raymond Williams's 1976 classic *Keywords*, the timely collection *Digital Keywords* gathers pointed, provocative short essays on more than two dozen keywords by leading and rising digital media scholars from the areas of anthropology, digital humanities, history, political science, philosophy, religious studies, rhetoric, science and technology studies, and sociology. *Digital Keywords* examines and critiques the rich lexicon animating the emerging field of digital studies. This collection broadens our understanding of how we talk about the modern world, particularly of the vocabulary at work in information technologies. Contributors scrutinize each keyword independently: for example, the recent pairing of digital and analog is separated, while classic terms such as community, culture, event, memory, and democracy are treated in light of their historical and intellectual importance. Metaphors of the cloud in cloud computing and the mirror in data mirroring combine with recent and radical uses of terms such as information, sharing, gaming, algorithm, and internet to reveal previously hidden insights into contemporary life. Bookended by a critical introduction and a list of over two hundred other digital keywords, these essays provide concise, compelling arguments about our current mediated condition. *Digital Keywords* delves into what language does in today's information revolution and why it matters.

Keywords in Sound David Novak, Matt Sakakeeny, 2015-05-09 In twenty essays on subjects such as noise, acoustics, music, and silence, *Keywords in Sound* presents a definitive resource for sound studies, and a compelling argument for why studying sound matters. Each contributor details their keyword's intellectual history, outlines its role in cultural, social and political discourses, and suggests possibilities for further research. *Keywords in Sound* charts the philosophical debates and core problems in defining, classifying and conceptualizing sound, and sets new challenges for the development of sound studies. Contributors. Andrew Eisenberg, Veit Erlmann, Patrick Feaster, Steven Feld, Daniel Fisher, Stefan Helmreich, Charles Hirschkind, Deborah Kapchan, Mara Mills, John Mowitt, David Novak, Ana Maria Ochoa Gautier, Thomas Porcello, Tom Rice, Tara Rodgers, Matt Sakakeeny, David Samuels, Mark M. Cultural Keywords in Discourse Carsten Levisen, Sophia Waters, 2017-10-15 Cultural keywords are words around which whole discourses are organised. They are culturally revealing, difficult to translate and semantically diverse. They capture how speakers have paid attention to the worlds they live in and embody socially recognised ways of thinking and feeling. The book contributes to a global turn in cultural keyword studies by

exploring keywords from discourse communities in Australia, Brazil, Hong Kong, Japan, Melanesia, Mexico and Scandinavia. Providing new case studies, the volume showcases the diversity of ways in which cultural logics form and shape discourse. The Natural Semantic Metalanguage (NSM) approach is used as a unifying framework for the studies. This approach offers an attractive methodology for doing explorative discourse analysis on emic and culturally-sensitive grounds. Cultural Keywords in Discourse will be of interest to researchers and students of semantics, pragmatics, cultural discourse studies, linguistic ethnography and intercultural communication.
