Deep Learning Ian Goodfellow, Yoshua Bengio, Aaron Courville, 2016-11-10 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. “Written by three experts in the field, Deep Learning is the only comprehensive book on the subject.” —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

Clarity for Learning John Almarode, Kara Vandas, 2018-10-24 An essential resource for student and teacher clarity With the ever-changing landscape of education, teachers and leaders often find themselves searching for clarity in a sea of standards, curriculum resources, and competing priorities. Clarity for Learning offers a simple and doable approach to developing clarity and sharing it with students through five essential components: crafting learning intentions and success criteria co-constructing learning intentions and success criteria with learners creating opportunities for students to respond effective feedback on and for learning students and teachers sharing learning and progress The book is full of examples from teachers and leaders who have shared their journey, struggles, and successes for readers to use to propel their own work forward.

The Book of Learning and Forgetting Frank Smith, 1998-04-02 In this thought-provoking book, Frank Smith explains how schools and educational authorities systematically obstruct the powerful inherent learning abilities of children, creating handicaps that often persist through life. The author eloquently contrasts a false and fabricated “official theory” that learning is work (used to justify the external control of teachers and students through excessive regulation and massive testing) with a correct but officially suppressed “classic view” that learning is a social process that can occur naturally and continually through collaborative activities. This book will be crucial reading in a time when national authorities continue to blame teachers and students for alleged failures in education. It will help educators and parents to combat sterile attitudes toward teaching and learning and prevent current practices from doing further harm.

Learning by Doing Richard DuFour, Rebecca DuFour, 2013-06-15 Like the first edition, the second edition of Learning by Doing: A Handbook for Professional Learning Communities at Work helps educators close the knowing-doing gap as they transform their schools into professional learning communities (PLCs).

Visible Learning John Hattie, 2008-11-19 This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

Deeper Learning Monica R. Martinez, Dennis McGrath, 2018-06-05 The acclaimed exploration of how public education can cultivate innovators—with a foreword by Russlynn Ali, a leading advocate for remaking schools Dime-a-dozen ideas for reforming education seem to be everywhere these days but few actually transform the everyday experience of the 50-million-plus students who are regularly subjected to traditional lecturing, note-taking, and rote learning—often with dismal results. Enter Deeper Learning, a fast read [that] will interest educators who want to produce self-motivated, passionate learners (Library Journal). Offering uplifting (Kirkus Reviews) anecdotes in what Tom Carroll of the National Commission on Teaching and America's Future calls a rare blend of inspiration and practical action, Deeper Learning provides a blueprint for creating flexible environments that put students at the helm of their own collaborative learning experience. This paperback edition includes a new foreword by renowned education advocate Russlynn Ali and will empower and inspire educators everywhere to address the need for schools to be genuinely innovative.

Mindful Learning Linda Campbell, Bruce Campbell, 2008-08-28 With new forms, techniques, and checklists, this second edition provides 101 strategies for using learners' prior knowledge.

An Introduction to Statistical Learning Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani, Jonathan Taylor, 2023-08-01 An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance, marketing, and astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, deep learning, survival analysis, multiple testing, and more. Color graphics and real-world examples are used to illustrate the methods presented. This book is targeted at statisticians and non-statisticians alike, who wish to use cutting-edge statistical learning techniques to analyze their data. Four of the authors co-wrote An Introduction to Statistical Learning, With Applications in R (ISLR), which has become a mainstay of undergraduate and graduate classrooms worldwide, as well as an important reference book for data scientists. One of the keys to its success was that each chapter contains a tutorial on implementing the analyses and methods presented in the R scientific computing environment. However, in recent years Python has become a popular language for data science, and there has been increasing demand for a Python-based alternative to ISLR. Hence, this book (ISLP) covers the same materials as ISLR but with labs implemented in Python. These labs will be useful both for Python novices, as well as experienced users.

Learning From Text Across Conceptual Domains Cynthia R. Hynd, 2013-12-16 This volume is an attempt to synthesize the understandings we have about reading to learn. Although learning at all ages is discussed in this volume, the main focus is on middle and high school classrooms--critical spaces of learning and thinking. The amount of knowledge presented in written form is increasing, and the information we get from texts is often conflicting. We are in a knowledge explosion that leaves us reeling and may effectively disenfranchise those who are not keeping up. There has never been a more crucial time for students to understand, learn from, and think critically about the information in various forms of text. Thus, understanding what it means to learn is vital for all educators. Learning from text is a complex matter that includes student factors (social, ethnic, and cultural differences, as well as varying motivations, self-perceptions, goals, and needs); instructional and teacher factors; and disciplinary and social factors. One important goal of the book is to encourage practicing teachers to learn to consider their students in new ways--to see them as being influenced by, and as influencing, not just the classroom but the total fabric of the disciplines they are learning. Equally important, it is intended to foster further research efforts--from local studies of classrooms by teachers to large-scale studies that produce generalizable understandings about learning from text. This volume--a result of the editor's and contributors' work with the National Reading Research Center--will be of interest to all researchers, graduate students, practicing teachers, and teachers in training who are interested in understanding the issues that are central to improving students' learning from text.

Active Learning Sherrie L. Nist, Sherrie Nist-Olejnik, Jodi Patrick Holschuh, Jodi Holschuh, 2000 The text is designed for use in study skills or strategies courses in which instructors want a strong focus on helping students become active, independent learners. Active Learning is unique because it teaches students about how their characteristics as a learner, their knowledge of the task, the materials to be learned, and their strategies for learning interact to influence academic success in college. Text topics include: motivation, time management, finding and using campus resources, dealing with professors, active learning strategies, test taking strategies, and rehearsal strategies. It takes a hands-on approach to learning new strategies for academic success. Each chapter contains a Research into Practice section, which translates studying and learning research into practices that will benefit the college student. Scenarios in each chapter present students with situations they can identify with and asks them to recognize and solve study problems. Students have ample opportunity for self-evaluation, critical thinking, and practice.

Time for Learning Kathleen P. Fulton, 2014-05-22 The guide school leaders need to reap the rewards of education's most exciting new trend Flipping classrooms—using class time for hands-on learning and off loading the lecture portion of lessons as homework—is taking schools by storm. This book makes the case to educational leaders for the benefits of flipping. Better Learning Through Structured Teaching Douglas Fisher, Nancy Frey, 2021-07-23 Now in its 3rd edition, *Better Learning Through Structured Teaching* is the definitive guide to the gradual release of responsibility—an instructional framework any teacher can use to help students to be more successful and self-directed learners. To gradually release responsibility is to equip students with what they need to master content and develop new competencies. On a day-to-day basis, it means delivering lessons intentionally structured to incorporate four interrelated phases: * Focused Instruction (I do it) that sets students up for cognitive apprenticeship by establishing lesson purpose, modeling strategies and skills, and sharing information and insight. * Guided Instruction (We do it together) that incorporates targeted prompts, cues, and questions to scaffold understanding. * Collaborative Learning (You do it together) that allows students to consolidate and extend understanding through accountable group tasks built on discussion and cooperative problem solving. * Independent Learning (You do it alone) that provides students opportunities to practice and apply the skills and knowledge they've acquired to create authentic products and ask new questions. Authors Douglas Fisher and Nancy Frey detail the components of each phase, sharing proven strategies and real-life examples. You'll find a variety of useful tips for classroom implementation, along with new guidance on teacher credibility, social-emotional learning, and embedding assessment throughout all four phases. No matter what grade level or subject you teach, *Better Learning Through Structured Teaching* is an essential resource for improving your practice and empowering your students.

The Rebirth of Education Lant Pritchett, 2013-10-14 Despite great progress around the world in getting more kids into schools, too many leave without even the most basic skills. In India's rural Andhra Pradesh, for instance, only about one in twenty children in fifth grade can perform basic arithmetic. The problem is that schooling is not the same as learning. In *The Rebirth of Education*, Lant Pritchett uses two metaphors from nature to explain why. The first draws on Ori Brafman and Rod Beckstrom's book about the difference between centralized and decentralized organizations, *The Starfish and the Spider*. Schools systems tend to be centralized and suffer from the limitations inherent in top-down designs. The second metaphor is the concept of isomorphic mimicry. Pritchett argues that many developing countries superficially imitate systems that were successful in other nations—much as a nonpoisonous snake mimics the look of a poisonous one. Pritchett argues that the solution is to allow functional systems to evolve locally out of an environment pressured for success. Such an ecosystem needs to be open to variety and experimentation, locally operated, and flexibly financed. The only main cost is ceding control; the reward would be the rebirth of education suited for today's world.
