Evaluation Practice Elizabeth DePoy,Stephen Gilson,2012-10-12 Evaluation Practice bridges the apparent gap between practice and research to present a logical, systematic model to guide all professional thinking and action within the context of everyday professional life. Their framework embraces diverse theories, action, and sets of evidence from a range of professional and disciplinary perspectives.

Social Work Research and Evaluation Elizabeth DePoy,Stephen Gilson,2016-06-20 Social Work Research and Evaluation applies systematically developed research knowledge to social work practice and emphasizes the “doing” of social work as a reciprocal avenue for generating research evidence and social work knowledge. Using the Examined Practice Model, authors Elizabeth G. DePoy and Stephen F. Gilson present research as the identification of a problem and then proceed to evaluate the efficacy of social work practice in its resolution. Diverse theories, actions, and sets of evidence from a range of professional and disciplinary perspectives are included to underscore the importance of integrating evaluation and practice in research.

The Conceptual Representation and the Measurement of Psychological Forces Kurt Lewin,2013-11 2013 Reprint of 1938 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. Kurt Lewin (1890-1947) was a German-American psychologist, known as one of the modern pioneers of social, organizational, and applied psychology. Lewin is often recognized as the founder of social psychology and was one of the first to study group dynamics and organizational development. Lewin developed the concept of force field analysis, which provides a framework for looking at the factors (forces) that influence a situation, originally social situations. It looks at forces that are either driving movement toward a goal (helping forces) or blocking movement toward a goal (hindering forces). The principle, developed by Kurt Lewin, is a significant contribution to the fields of social science, psychology, social psychology, organizational development, process management, and change management. This book is an early effort to establish the principles of his force field analysis. An attempt is made to describe the position of the concept of force in psychology and to discuss major methods of measuring psychological forces. One of the outstanding properties of force is its directedness. Direction in psychology cannot be defined as physical direction and cannot be determined by Euclidian geometry. A geometry applicable in psychology is that of hodological space. The geometrical properties of this space are described, and examples of its application in determining directions and distances in the life space are offered. The conceptual properties of the construct of force are given, as well as a definition coordinating it with observable processes. The conceptual and dynamic relation between psychological forces, valences, and tensions are discussed, as are certain basic theories concerning the relation between need, environment, and the mechanics of locomotion. Various methods of measuring forces and valences are surveyed, especially those related to opposing forces and to velocity of locomotion, including velocity and restlessness, consumption, translocation, and learning. The problem of the structure of the force field and of overlapping force fields is discussed, including several choice and conflict situations with stable and labile equilibria.

The SAGE Handbook of Interview Research Jaber F. Gubrium,James A. Holstein,Amir B. Marvasti,Karyn D. McKinney,2012-02-14 The new edition of this landmark volume emphasizes the dynamic, interactional, and reflexive dimensions of the research interview. Contributors highlight the myriad dimensions of complexity that are emerging as researchers increasingly frame the interview as a communicative opportunity as much as a data-gathering format. The book begins with the history and conceptual transformations of the interview, which is followed by chapters that discuss the main components of interview practice. Taken together, the contributions to The SAGE Handbook of Interview Research: The Complexity of the Craft encourage readers simultaneously to learn the frameworks and technologies of interviewing and to reflect on the epistemological foundations of the interview craft.

The Lewin Legacy Eugene Stivers,Susan Wheelan,2012-12-06 I have attended quite a few conferences and meetings devoted to the ideas of Kurt Lewin. Among these the 1984 conference at Temple was out standing for its high quality. What made it so successful? Several things. The conference included a stimulating mix of generations. The first generation of women who obtained their Ph. D. 's in psychology in Berlin in the 1920's strike me as a remarkable group. Now in their 80's, they are characterized by enormous vigor and energy. They are still professionally active. Two of them - Tamara Dembo and Maria Rickers Ovsienkina - joined us. Other participants in the Temple conference had been in Iowa in the 1930's and 1940's, or at MIT. Of course there were many who had learned about Lewin from their own teachers, and in some cases, their teachers' teachers. There was a good mixture of applied psychologists and academics. Father said on several occasions that he did not want to found a school of psychology as such. Rather he wanted to introduce the field theoretical viewpoint and approach. I think he would have been stimulated by and enthusiastic about the many diverse areas to which Lewinian analyses, ideas, and concepts are applied today, as illustrated by this volume. He would have been pleased to see so many people applying basic theoretical concepts to important social problems. Father loved to discover new things about America.

Data Envelopment Analysis: Theory, Methodology, and Applications Abraham Charnes,William W. Cooper,Arie Y. Lewin,Lawrence M. Seiford,2013-12-01 This book represents a milestone in the progression of Data Envelopment Analysis (DEA). It is the first reference text which includes a comprehensive review and comparative discussion of the basic DEA models. The development is anchored in a unified mathematical and graphical treatment and includes the most important modeling extensions. In addition, this is the first book that addresses the actual process of conducting

DEA analyses including combining DEA and 1 parametric techniques. The book has three other distinctive features. It traces the applications driven evolution and diffusion of DEA models and extensions across disciplinary boundaries. It includes a comprehensive bibliography to serve as a source of references as well as a platform for further developments. And, finally, the power of DEA analysis is demonstrated through fifteen novel applications which should serve as an inspiration for future applications and extensions of the methodology. The origin of this book was a Conference on New Uses of DEA in 2 Management and Public Policy which was held at the IC Institute of the University of Texas at Austin on September 27-29, 1989. The conference was made possible through NSF Grant #SES-8722504 (A. Charnes and 2 W. W. Cooper, co-PIs) and the support of the IC Institute.

The Impact of Case Technology on Software Processes Daniel E Cooke, 1994-03-07 This review volume consists of articles concerning CASE technology and research as discussed from two perspectives. For the most part, the available CASE technology is intended to automate certain phases of the software development life cycle. The book contains articles which focus on how the current technology alters the nature of software engineering efforts. Papers which delve into the knowledge a software engineer needs to possess and how the software engineer's work content has or may change are included. Cultural as well as technical considerations are discussed. The current CASE technology exists to automate phases of the software development life cycle, thus affecting software development in the short term, but we cannot ignore the CASE research efforts toward a higher generation language. Such a language should affect software development in the long term. Papers suggesting how these languages may alter the nature of software engineering in the future are presented. Contents: An Introduction to the Issues of Computer Aided Software Engineering (D E Cooke) System Development as a Wicked Problem (R T Yeh) Assessing Proximity to Fruition: A Case Study of the Phases in CASE Technology Transfer (G F Corbitt et al.) The Role of Prototyping Languages in CASE (Luqi) Integrating User Interface Development and Modern Software Development (W D Hurley) TEXPROS: An Intelligent Document Processing System (J T L Wang & P A Ng) SAMEA: Object-Oriented Software Maintenance Environment for Assembly Programs (S Chen et al.)
