Limit Frank Schatzing,2013-11-05 Frank Schatzing's The Swarm was an international science-fiction blockbuster, winner of the Koln Literatur Prize, the Corine Prize, and the German Science Fiction Prize. Limit is his most ambitious work to-date--a multilayered thriller that balances astonishing scientific, historical, and technical detail. Against this backdrop, Schatzing convincingly realizes a possible near future when humankind's ingenuity may become the greatest risk to its continued existence. In 2025, entrepreneur Julian Orley opens the first-ever hotel on the moon. But Orley Enterprises deals in more than space tourism--it also operates the world's only space elevator, which in addition to allowing the very wealthy to play tennis on the lunar surface connects Earth with the moon and enables the transportation of helium-3, the fuel of the future, back to the planet. Julian has invited twenty-one of the world's richest and most powerful individuals to sample his brand-new lunar accommodation, hoping to secure the finances for a second elevator. On Earth, meanwhile, cybercop Owen Jericho is sent to Shanghai to find a young female hacker known as Yoyo, who's been on the run since acquiring access to information that someone seems quite determined to keep quiet. As Jericho closes in on the girl and the conspiracy swirling around her, he finds mounting evidence that connects her to Julian Orley as well as to the entrepreneur's many competitors and enemies. Soon, the detective realizes that the lunar junket to Orley's hotel is in real and immediate danger. From the Hardcover edition.

The Limit Michael Cannell,2011-11-07 In THE LIMIT, Michael Cannell tells the enthralling story of Phil Hill-a lowly California mechanic who would become the first American-born driver to win the Grand Prix-and, on the fiftieth anniversary of his triumph, brings to life a vanished world of glamour, valor, and daring. With the pacing and vivid description of a novel, THE LIMIT charts the journey that brought Hill from dusty California lots racing midget cars into the ranks of a singular breed of men, competing with daredevils for glory on Grand Prix tracks across Europe. Facing death at every turn, these men rounded circuits at well over 150 mph in an era before seat belts or roll bars-an era when drivers were crushed, burned, and beheaded with unnerving regularity. From the stink of grease-smothered pits to the long anxious nights in lonely European hotels, from the tense camaraderie of teammates to the trembling suspense of photo finishes, THE LIMIT captures the 1961 season that would mark the high point of Hill's career. It brings readers up close to the remarkable men who surrounded Hill on the circuit-men like Hill's teammate and rival, the soigné and cool-headed German count Wolfgang Von Trips (nicknamed Count Von Crash), and Enzo Ferrari, the reclusive and monomaniacal padrone of the Ferrari racing empire. Race by race, THE LIMIT carries readers to its riveting and startling climax-the final contest that would decide it all, one of the deadliest in Grand Prix history.

Limit Operators, Collective Compactness, and the Spectral Theory of Infinite Matrices Simon N. Chandler-Wilde,Marko Lindner,2011 In the first half of this memoir the authors explore the interrelationships between the abstract theory of limit operators (see e.g. the recent monographs of Rabinovich, Roch and Silbermann (2004) and Lindner (2006)) and the concepts and results of the generalised collectively compact operator theory introduced by Chandler-Wilde and Zhang (2002). They build up to results obtained by applying this generalised collectively compact operator theory to the set of limit operators of an operator A (its operator spectrum). In the second half of this memoir the authors study bounded linear operators on the generalised sequence space $\ell^p(\mathbb{Z}^N, U)$, where $p \in [1, \infty]$ and U is some complex Banach space. They make what seems to be a more complete study than hitherto of the connections between Fredholmness, invertibility, invertibility at infinity, and invertibility or injectivity of the set of limit operators, with some emphasis on the case when the operator A is a locally compact perturbation of the identity. Especially, they obtain stronger results than previously known for the subtle limiting cases of $p=1$ and ∞ .

Limit Order Books Frédéric Abergel,Marouane Anane,Anirban Chakraborti,Aymen Jedidi,Ioane Muni Toke,2016-05-09 A limit order book is essentially a file on a computer that contains all orders sent to the market, along with their characteristics such as the sign of the order, price, quantity and a timestamp. The majority of organized electronic markets rely on limit order books to store the list of interests of market participants on their central computer. A limit order book contains all the information available on a specific market and it reflects the way the market moves under the influence of its participants. This book discusses several models of limit order books. It begins by discussing the data to assess their empirical properties, and then moves on to mathematical models in order to reproduce the observed properties. Finally, the book presents a framework for numerical simulations. It also covers important modelling techniques including agent-based modelling, and advanced modelling of limit order books based on Hawkes processes. The book also provides in-depth coverage of simulation techniques and introduces general, flexible, open source library concepts useful to readers studying trading strategies in order-driven markets.

The Limits of Autobiography Leigh Gilmore,2023-07-15 In The Limits of Autobiography, Leigh Gilmore analyzes texts that depict trauma by combining elements of autobiography, fiction, biography, history, and theory in ways that challenge the constraints of autobiography. Astute and compelling readings of works by Michel Foucault, Louis Althusser, Dorothy Allison, Mikal Gilmore, Jamaica Kincaid, and Jeanette Winterson explore how each poses the questions How have I lived? and How will I live? in relation to the social and psychic forms within which trauma emerges. First published in 2001, this new edition of one of the foundational texts in trauma studies includes a new preface by the author that assesses the gravitational pull between life writing and trauma in the twenty-first century, a tension that continues to produce innovative and artful means of confronting kinship, violence, and self-representation.

The Upper Limit François Bonnet,2019-08-27 Since 1993, crime in the United States has fallen to historic lows, seeming to legitimize the country’s mix of welfare reform and mass incarceration. The Upper Limit explains how this unusual mix came about, examining how, beginning in the 1970s, declining living standards for the poor have defined social and penal policy in the United States, making welfare more restrictive and punishment harsher. François Bonnet shows how low-wage work sets the upper limit of social and penal policy, where welfare must be less attractive than low-wage work and criminal life must be less attractive than welfare. In essence, the living standards of the lowest class of workers in a society determine the upper limit for the generosity of welfare and for the humanity of punishment in that society. The Upper Limit explores the local consequences of this punitive adjustment in East New York, a Brooklyn neighborhood where crime fell in the 1990s. Bonnet argues that no meaningful penal reform can happen unless living standards and the minimum wage rise again. Enlightening and provocative, The Upper Limit provides a comprehensive theory of the evolution of social and penal policy.

Attitudes Towards Social Limits, Undersocialized Behavior, and Self-presentation in Young People Hans Grietens,1999 In this book a study is presented on the attitudes of 12- to 20-year-old youngsters

towards social limits, imposed by their social and educational environment by means of laws, rules, values, norms or expectations. The study is part of a research programme on the course and treatment of juvenile delinquency, which started at the Rijksuniversiteit Groningen during the eighties. Young people's attitudes towards social limits are assessed by the 'Standard Reaction Instrument'. A critical incident technique is used to elicit young people's knowledge, behavioral intentions and motivations in ten hypothetical situations including social limits. The instrument was administered from youngsters in secondary schools and from same-aged detained youngsters who have committed at least one criminal offence which has been recorded by police or judicial authorities. The responses of both groups are compared in order to test the validity of the instrument. Further, the relationship is tested between the youngsters' attitudes towards social limits and self-reported delinquent and aggressive behavior. Finally, a comparison is made between the responses of Flemish and Dutch youngsters. Starting point of the empirical study is a social psychological view on juvenile delinquency. In this view, which is based on the self-presentation paradigm developed by the sociologist Ervin Goffman and the early symbolic interactionists, juvenile delinquency is considered as a means of social communication towards significant others (parents, teachers, peers, society). Special attention is paid to the development, maintenance and management of social reputation by the juvenile delinquent.

The Limits of Business Development and Economic Growth M. Larsson,2004-09-07 The economy has hit a soft patch.' - US Federal Reserve Chairman Alan Greenspan, reacting to the weak US job growth in June 2004 Mats Larsson: 'No, the economy is closing in on the limits of business development and economic growth and we are starting to see the consequences. In the next few years we will need to rethink economic policies and business strategies.' The Limits of Business Development and Economic Growth details what this means for your company, your industry or your country! There are limits to business development and economic growth. With the help of modern production and information technologies, companies are coming ever closer to the limits of what can be achieved but ultimately nothing can be done in less than no time and at less than no cost. We now need to find areas of competitive advantage that have not yet been fully exploited. This book presents both the problems and the solutions in an accessible way for experts and non-experts alike.
