*Parallel and Distributed Processing and Applications* Yi Pan, Daoxu Chen, Minyi Guo, Jiannong Cao, Jack Dongarra, 2005-10-19 Welcome to the proceedings of ISPA 2005 which was held in the city of Nanjing. Parallel computing has become a mainstream research area in computer science and the ISPA conference has become one of the premier forums for the presentation of new and exciting research on all aspects of parallel computing. We are pleased to present the proceedings for the 3rd International Symposium on Parallel and Distributed Processing and Applications (ISPA 2005), which comprises a collection of excellent technical papers, and keynote speeches. The papers accepted cover a wide range of exciting topics, including architectures, software, networking, and applications. The conference continues to grow and this year a record total of 968 manuscripts (including workshop submissions) were submitted for consideration by the Program Committee or workshops. From the 645 papers submitted to the main conference, the Program Committee selected only 90 long papers and 19 short papers in the program. Eight workshops complemented the outstanding paper sessions.

**Web Engineering** David Lowe, Martin Gaedke, 2011-04-06 Over the last few years Web Engineering has begun to gain mainstream acceptance within the software engineering, IT and related disciplines. In particular, both researchers and practitioners are increasingly recognizing the unique characteristics of Web systems, and what these characteristics imply in terms of the approaches we take to Web systems development and deployment in practice. A scan of the publications in related conference proceedings and journals highlights the diversity of the discipline areas which contribute to both the richness and the complexity of Web Engineering. The 5th International Conference on Web Engineering (ICWE2005), held in Sydney, Australia, extends the traditions established by the earlier conferences in the series: ICWE2004 in Munich, Germany; ICWE2003 in Oviedo, Spain; ICWE2002 in Santa Fe, Argentina; and ICWE2001 in Cáceres, Spain. Not only have these conferences helped disseminate cutting edge research within the field of Web Engineering, but they have also helped define and shape the discipline itself. The program we have put together for ICWE2005 continues this evolution. Indeed, we can now begin to see the maturing of the field. For possibly the first time, there was very little debate within the Program Committee about which papers were in and out of scope, and much more debate as to the each papers contributions to the field.

*Global Enterprise Management, Volume II* A. Camillo, 2015-06-03 The ongoing progress of globalization has created a new need in multinational and international companies for managers who have the skills and competencies to be rotated anywhere in the world. While most books addressing global management have focused on the practitioner experience, theory, or academic knowledge relevant to one region or country, Global Enterprise Management unites all these approaches in a practical framework designed to provide students, educators, and practitioners with the skills to succeed in the global managerial landscape. Inspired by his 35 years in international hospitality management, Camillo brings together an interdisciplinary team to break down the challenges facing managers in global companies, including supply chains, business ventures, technology, accounting, marketing, and human resources. A collection of real-world case studies grounds theory in contemporary practice and directs the conversation toward the future.

The mere act of turning on an Internet-connected computer can put you, your family, and even your personal finances at risk! This book defines all the threats an average household might face and provides strategies to turn novice and basic users into adept home security experts, making you safer and more secure from cyber criminals. We start off with plain English definitions for security mumbo jumbo, and then we dig in with step-by-step instructions to help you cut your exposure in less than 10 minutes! Finally, we provide steps for more involved security measures that you can do in a weekend. We also take an in-depth look at the security measures Microsoft put in Windows Vista. We also look at how Vista responds to the key threats. It teaches you how to tweak the system and make Microsoft’s new security features—like the User Access Control—less annoying and helps you adjust the system to be usable. It shows you how to set up Vista to protect your system from your kids—the biggest security hazard to your computer. • More than 5 million spam emails flood the Internet daily—many with your name on them—we show you how to make yourself invisible to detestable spammers! • Did you know that hackers are snooping around your IP address right now, while you read this? They might already have breached what security you have and could be running amok with your personal data. Stop them dead in their tracks with a few simple steps! • Identity theft is the most popular form of consumer fraud today, and last year thieves stole more than \$100 million from people just like you. Put a stop to the madness with the steps provided in this book! • Spyware—nasty little programs that you might not even know you have installed on your PC—could be causing your PC to crash. We show you how to root it out of your system and prevent further infection.
