Mapping Detroit June Manning Thomas,2015-03-16 One of Detroit's most defining modern characteristics--and most pressing dilemmas--is its huge amount of neglected and vacant land. In Mapping Detroit: Land, Community, and Shaping a City, editors June Manning Thomas and Henco Bekkering use chapters based on a variety of maps to shed light on how Detroit moved from frontier fort to thriving industrial metropolis to today's high-vacancy city. With contributors ranging from a map archivist and a historian to architects, urban designers, and urban planners, Mapping Detroit brings a unique perspective to the historical causes, contemporary effects, and potential future of Detroit's transformed landscape. To show how Detroit arrived in its present condition, contributors in part 1, Evolving Detroit: Past to Present, trace the city's beginnings as an agricultural, military, and trade outpost and map both its depopulation and attempts at redevelopment. In part 2, Portions of the City, contributors delve into particular land-related systems and neighborhood characteristics that encouraged modern social and economic changes. Part 2 continues by offering case studies of two city neighborhoods--the Brightmoor area and Southwest Detroit--that are struggling to adapt to changing landscapes. In part 3, Understanding Contemporary Space and Potential, contributors consider both the city's ecological assets and its sociological fragmentation to add dimension to the current understanding of its emptiness. The volume's epilogue offers a synopsis of the major points of the 2012 Detroit Future City report, the city's own strategic blueprint for future land use. Mapping Detroit explores not only what happens when a large city loses its main industrial purpose and a major portion of its population but also what future might result from such upheaval. Containing some of the leading voices on Detroit's history and future, Mapping Detroit will be informative reading for anyone interested in urban studies, geography, and recent American history.

Mappings Denis Cosgrove,1999-04-01 Mappings explores what mapping has meant in the past and how its meanings have altered. How have maps and mapping served to order and represent physical, social and imaginative worlds? How has the practice of mapping shaped modern seeing and knowing? In what ways do contemporary changes in our experience of the world alter the meanings and practice of mapping, and vice versa? In their diverse expressions, maps and the representational processes of mapping have constructed the spaces of modernity since the early Renaissance. The map's spatial fixity, its capacity to frame, control and communicate knowledge through combining image and text, and cartography's increasing claims to scientific authority, make mapping at once an instrument and a metaphor for rational understanding of the world. Among the topics the authors investigate are projective and imaginative mappings; mappings of terraqueous spaces; mapping and localism at the 'chorographic' scale; and mapping as personal exploration. With essays by Jerry Brotton, Paul Carter, Michael Charlesworth, James Corner, Wytan Curnow, Christian Jacob, Luciana de Lima Martins, David Matless, Armand Mattelart, Lucia Nuti and Alessandro Scafi

Mapping Boston Alex Krieger,David Cobb,2001-08-24 An informative—and beautiful—exploration of the life and history of a city through its maps. To the attentive user even the simplest map can reveal not only where things are but how people perceive and imagine the spaces they occupy. Mapping Boston is an exemplar of such creative attentiveness—bringing the history of one of America's oldest and most beautiful cities alive through the maps that have depicted it over the centuries.The book includes both historical maps of the city and maps showing the gradual emergence of the New England region from the imaginations of explorers to a form that we would recognize today. Each map is accompanied by a full description and by a short essay offering an insight into its context. The topics of these essays by Anne Mackin include people both familiar and unknown, landmarks, and events that were significant in shaping the landscape or life of the city. A highlight of the book is a series of new maps detailing Boston's growth. The book also contains seven essays that explore the intertwining of maps and history. Urban historian Sam Bass Warner, Jr., starts with a capsule history of Boston. Barbara McCorkle, David Bosse, and David Cobb discuss the making and trading of maps from the sixteenth to the nineteenth century. Historian Nancy S. Seasholes reviews the city's remarkable topographic history as reflected in maps, and planner Alex Krieger explores the relation between maps and the physical reality of the city as experienced by residents and visitors. In an epilogue, novelist James Carroll ponders the place of Boston in contemporary culture and the interior maps we carry of a city.

Mapping Experiences Jim Kalbach,2016-04-25 Customers who have inconsistent, broken experiences with products and services are understandably frustrated. But it's worse when people inside these companies can't pinpoint the problem because they're too focused on business processes. This practical book shows your company how to use alignment diagrams to turn valuable customer observations into actionable insight. With this unique tool, you can visually map your existing customer experience and envision future solutions. Product and brand managers, marketing specialists, and business owners will learn how experience diagramming can help determine where business goals and customer perspectives intersect. Once you're armed with this data, you can provide users with real value. Mapping Experiences is divided into three parts: Understand the underlying principles of diagramming, and discover how these diagrams can inform strategy Learn how to create diagrams with the four iterative modes in the mapping process: setting up a mapping initiative, investigating the evidence, visualizing the process, and using diagrams in workshops and experiments See key diagrams in action, including service blueprints, customer journey maps, experience maps, mental models, and spatial maps and ecosystem models

Conformal Mapping Zeev Nehari,2012-05-23 Conformal mapping is a field in which pure and applied mathematics are both involved. This book tries to bridge the gulf that many times divides these two disciplines by combining the theoretical and practical approaches to the subject. It will interest the pure mathematician, engineer, physicist, and applied mathematician. The potential theory and complex function theory necessary for a full treatment of conformal mapping are developed in the first four chapters, so the reader needs no other text on complex variables. These chapters cover harmonic functions, analytic functions, the complex integral calculus, and families of analytic functions. Included here are discussions of Green's formula, the Poisson formula, the Cauchy-Riemann equations, Cauchy's theorem, the Laurent series, and the Residue theorem. The final three chapters consider in detail conformal mapping of simply-connected domains, mapping properties of special functions, and conformal mapping of multiply-connected domains. The coverage here includes such topics as the Schwarz lemma, the Riemann mapping theorem, the Schwarz-Christoffel formula, univalent functions, the kernel function, elliptic functions, univalent functions, the kernel function, elliptic functions, the Schwarzian s-functions, canonical domains, and bounded functions. There are many problems and exercises, making the book useful for both self-study and classroom use. The author, former professor of mathematics at Carnegie-Mellon University, has designed the book as a semester's introduction to functions of a complex variable followed by a one-year graduate course in conformal mapping. The material is presented simply and clearly, and the only prerequisite is a good working knowledge of advanced calculus.

Inefficient Mapping Linda Knight,2021-08-05 Working from a speculative, more-than-human ontological position, Inefficient Mapping: A Protocol for Attuning to

Phenomena presents a new, experimental cartographic practice and non-representational methodological protocol that attunes to the subaltern genealogies of sites and places, proposing a wayfaring practice for traversing the land founded on an ethics of care. As a methodological protocol, inefficient mapping inscribes the histories and politics of a place by gesturally marking affective and relational imprints of colonisation, industrialisation, appropriation, histories, futures, exclusions, privileges, neglect, survival, and persistence. Inefficient Mapping details a research experiment and is designed to be taken out on mapping expeditions to be referred to, consulted with, and experimented with by those who are familiar or new to mapping. The inefficient mapping protocol described in this book is informed by feminist speculative and immanent theories, including posthuman theories, critical-cultural theories, Indigenous and critical place inquiry, as well as the works of Karen Barad, Erin Manning, Jane Bennett, Maria Puig de la Bellacassa, Elizabeth Povinelli, and Eve Tuck and Marcia McKenzie, which frame how inefficient mapping attunes to the matter, tenses, and ontologies of phenomena and how the interweaving agglomerations of theory, critique, and practice can remain embedded in experimental methodologies--Publisher's website

Mapping Manhattan Becky Cooper,2013-04-02 Armed with hundreds of blank maps she had painstakingly printed by hand, Becky Cooper walked Manhattan from end to end. Along her journey she met police officers, homeless people, fashion models, and senior citizens who had lived in Manhattan all their lives. She asked the strangers to “map their Manhattan” and to mail the personalized maps back to her. Soon, her P.O. box was filled with a cartography of intimate narratives: past loves, lost homes, childhood memories, comical moments, and surprising confessions. A beautifully illustrated, PostSecret-style tribute to New York, Mapping Manhattan includes 75 maps from both anonymous mapmakers and notable New Yorkers, including Man on Wire aerialist Philippe Petit, New York Times wine critic Eric Asimov, Tony award-winning actor Harvey Fierstein, and many more. Praise for Mapping Manhattan: “What an intriguing project.”–The New York Times “A tender cartographic love letter to this timeless city of multiple dimensions, parallel realities, and perpendicular views.” –Brain Pickings “Cooper’s beautiful project linking the lives of New Yorkers is one that will continue to grow.” –Publishers Weekly online
