🔍 **ATTRACTING SUSTAINABLE INVESTMENT** Saskia Vanderbent,2022-12-30 This book is a practitioner’s guide to sustainable development, laying out strategies for attracting investment for communities and their partners. It proposes an innovative sustainable development proposition (SDP) decision-making tool based on a propositional calculus that can be used to analyse the sustainability of an infrastructure investment. It draws on environmental sustainability governance data analysis enabling investors to understand the economic indicators, income potential, return on investment, demand and legal compliance, as well as community and social benefits. Identified risks, issues and advantages are managed and monitored, and the SDP guidance can be applied to improve the prospects of the project in order to attract investment. Sustainable Community Investment Indicators (SCIIs™) have been developed to assist with attracting investment and monitoring feedback on infrastructure projects, designed by the author for remote rural and indigenous communities – in response to current industry tools that are designed for urban environments. The book includes a broad range of real-world and hypothetical case studies in agricultural and indigenous areas in South America, Europe, Africa, Asia, Australia and the Pacific. Taking a diverse economies approach, these industry tools can be adapted to allow for enterprise design with unique communities. This book provides sustainable development practitioners, including government agencies, financiers, developers, lawyers and engineers, with a positive, practical guide to addressing and overcoming global issues with local and community-based solutions and funding options.

🔍 **VIRTUAL REALITY, TRAINING’S FUTURE?** Robert J. Seidel,Paul R. Chatelier,2013-06-29 In 1988, the NATO panel governing human sciences (Panel 8 on Defence Applica of Human and Bio-Medical Sciences) established a Research Study Group to synthe tions size information relevant to advanced technologies applied to training design. During its first phase, the RSG established an active exchange of information on advanced tech nologies applied to training design and stimulated much military application of these tech nologies. With the increased emphasis on training throughout the alliance, Panel 8, during its April 1991 meeting decided to continue with Phase II of this RSG focusing in the area of advanced training technologies that were emerging within the alliance. In order to ac complish its mission, the RSG held a series of workshops. Leaders in technology and training were brought together and exchanged information on the latest developments in technologies applicable to training and education. This volume represents the last in a se ries based on the NATO workshops. In Part One, it details findings from the last work shop, Virtual Reality for Training; and in Part Two, we provide a summary perspective on Virtual Reality and the other emerging technologies previously studied. These include computer-based training, expert systems, authoring systems, cost-effectiveness, and dis tance learning. It is a natural extension to proceed from learning without boundaries to virtual envi ronments. From the extended classroom to the individual or team immersion in a distrib uted, virtual, and collaborative environment is an easy conceptual step.
