Metropolitan Circles Development And The Future Of Urbanization Wei Shan,Lijun Yang,2020-03-19 This book discusses lessons and challenges of metropolitan circles development and urbanization in Asia, Europe, North America, Latin America and Africa. The book examines the effects of local governance systems, central-local relations, and administrative borders on metropolitan area development. It surveys economic, social and environmental issues, with an emphasis on how interconnectivity, circular economy, and climate issues should be integrated into megaregion development planning. The chapters are selected papers from the international conference on metropolitan circles development and urbanization jointly held by the Institute of Public Policy (IPP) at the South China University of Technology and UNESCO in 2018. Contributors from the US, the UK, Japan, France, Singapore, Indonesia, Mexico, Tanzania present their questions, observations, and analyses in a narrative and descriptive style which appeal to a wide range of audience.

**.NET Wireless Programming** Mark Ridgeway,2006-02-20 Microsoft's .NET strategy embraces a vision for integrating diverse elements of computing technology and data services. The wireless Internet and mobile devices are core components of that strategy. Visual Studio .NET includes a powerful set of toolsthe Mobile Internet Toolkitfor developing websites and applications that can be accessed from all kinds of mobile devices .NET Wireless Programming provides the technical details you need to master to develop end-to-end wireless solutions based on .NET technology. You'll learn to take advantage of the Mobile Internet Toolkit's automated deployment capabilities, which enable a single site or application to work with nearly any mobile device. Freed from the task of writing code to accommodate various devices, you'll be able to apply other skills to build a more powerful application: Work with styles and templates. Create custom controls. Read from and write to databases. And use Microsoft's Web Services in support of a distributed architecture. Five case studies, including a mobile intranet, a contacts database, and an online game, illustrate solutions to real problems and techniques for maximizing application flexibility. A set of appendices provide detailed information on the WML language and the Toolkit's classes. This book presents its many code examples in Visual Basic .NET, but the greater emphasis is on Visual Studio .NET and the flexibility it gives developers in choosing the language they want to use.

**Constantinople** Ken Dark,Ferudun Özgümüş,2013-11-29 Istanbul, Europe's largest city, became an urban centre of exceptional size when it was chosen by Constantine the Great as a new Roman capital city. Named 'Constantinople' after him, the city has been studied through its rich textual sources and surviving buildings, but its archaeology remains relatively little known compared to other great urban centres of the ancient and medieval worlds. Constantinople: Archaeology of a Byzantine Megapolis is a major archaeological assessment of a key period in the development of this historic city. It uses material evidence, contemporary developments in urban archaeology and archaeological theory to explore over a thousand years of the city's development. Moving away from the scholarly emphasis on the monumental core or city defences, the volume investigates the inter-mural area between the fifth-century land walls and the Constantinian city wall - a zone which encompasses half of the walled area but which has received little archaeological attention. Utilizing data from a variety of sources, including the 'Istanbul Rescue Archaeology Project' created to record material threatened with destruction, the analysis proposes a new model of Byzantine Constantinople. A range of themes are explored including the social, economic and cognitive development, Byzantine perceptions of the city, the consequences of imperial ideology and the impact of 'self-organization' brought about by many minor decisions. Constantinople casts new light on the transformation of an ancient Roman capital to an Orthodox Christian holy city and will be of great importance to archaeologists and historians.

*Constructive Processing of Microwave and Optical Data for Hydrogeochemical Applications* Costas A. Varotsos,Vladimir F. Krapivin,Ferdenant A. Mkrtchyan,Yong Xue,2023-05-24 This book presents results of the combined use of microwave remote sensing, optical tools, and ecoinformatics methods under solution-applied tasks at both regional and global scales. Ecoinformatics methods are used to assess links between global climate change and the level of ocean pollution, with specific focus on the Arctic Ocean, the Sea of Okhotsk, and the South-China Sea. The theoretical and applied aspects of instrumental tools are considered in this book as a basis for the monitoring of water quality in various watersheds, with particular attention to microwave remote sensing monitoring data to determine the ecotoxicological status of hydro-ecosystems affected by climate change. The book develops new information technologies that provide solutions for hydrochemical tasks using algorithms and models based on computer technologies for big data processing. This will help to synthesize effective computer-based systems for the solution of problems arising due to anthropogenic impacts on hydrological processes and objects at various spatial scales. This book is intended for specialists in the fields of environmental monitoring, climate change, human-nature interactions, and geopolitics. The book will be useful for undergraduate and postgraduate students studying these fields of science as well.

**Bunny Man's Bridge** Ted Neill,2018-08-26 Independent Press Award Winner for BEST SHORT STORY COLLECTION 2018Finalist for BEST SHORT STORY COLLECTION - Next Generation Indie Book Awards 2018. SILVER MEDAL WINNER Best Short Story Collection E-Lit Awards 2019 These stories are old and young at once: old in that they were written almost twenty years ago, but also young, as they were written by the author as a young man. They are an examination of a childhood come to a close and a imagining of what adulthood might look like in a new century. Bunny Man's Bridge wanders from the tragic to the comic, where the magical thinking of children collides with the gritty reality of adults. Characters such as Daniel and Sydney reoccur from one story to the next, coping with their own wounds, dreams, and disillusionments. They are accompanied by a series of characters familiar in American literature: the working man; the aspiring woman; the frontier hero; the entrepreneur; the immigrant; the artist; conmen; strippers; saints and sinners. St. Paul, Satan, and God himself all make appearances. Neill explores the dark intersection of youthful exuberance and responsible adulthood--a place where love and adventure, the sacred and profane all seem destined to collide. Transcendence or insanity could lurk behind the next bend and the atmosphere shivers with the potential and anxiety of a country shaking off its past to move into another millennium. The stories remind us just what a heady ride young

adulthood is and what, collectively, might lie before us. Poised at such a threshold, individuals and a country hold their breath.

*Emerging Global Cities* Alejandro Portes,Ariel C. Armony,2022-12-27 Certain cities—most famously New York, London, and Tokyo—have been identified as “global cities,” whose function in the world economy transcends national borders. Without the same fanfare, formerly peripheral and secondary cities have been growing in importance, emerging as global cities in their own right. The striking similarity of the skylines of Dubai, Miami, and Singapore is no coincidence: despite following different historical paths, all three have achieved newfound prominence through parallel trends. In this groundbreaking book, Alejandro Portes and Ariel C. Armony demonstrate how the rapid and unexpected rise of these three cities recasts global urban studies. They identify the constellation of factors that allow certain urban places to become “emerging global cities”—centers of commerce, finance, art, and culture for entire regions. The book traces the transformations of Dubai, Miami, and Singapore, identifying key features common to these emerging global cities. It contrasts them with “global hopefuls,” cities that, at one point or another, aspired to become global, and analyzes how Hong Kong is threatened with the loss of this status. Portes and Armony highlight the importance of climate change to the prospects of emerging global cities, showing how the same economic system that propelled their rise now imperils their future. *Emerging Global Cities* provides a powerful new framework for understanding the role of peripheral cities in the world economy and how they compete for and sometimes achieve global standing.

**Cyber-Physical Systems and Control II** Dmitry G. Arseniev,Nabil Aouf,2023-01-20 The book contains selected research papers presented at the 2nd International Conference on Cyber-Physical Systems and Control (CPS&C’2021) which was held from 29 June to 2 July 2021 in St. Petersburg, Russia. The CPS&C’2021 Conference continues the series of international conferences that began in 2019 when the first International Conference on Cyber-Physical Systems and Control (CPS&C’2019) took place. Cyber-physical systems (CPSs) considered a modern and rapidly emerging generation of systems with integrated wide computational, information processing, and physical capabilities that can interact with humans through many new modalities and application areas of implementation. The book covers the latest advances, developments and achievements in new theories, algorithms, models, and applications of prospective problems associated with CPSs with an emphasis on control theory and related areas. The multidisciplinary fundamental scientific and engineering principles that underpin the integration of cyber and physical elements across all application areas are discussed in the book chapters. The materials of the book may be of interest to scientists and engineers working in the field of cyber-physical systems, systems analysis, control systems, computer technologies, and similar fields.

*Advancements in Urban Environmental Studies* Atiqur Rahman,Shouraseni Sen Roy,Swapan Talukdar,Shahfahad,2023-03-03 According to UN estimates, approximately nearly half of the world's population now lives in cities and that figure is expected to rise to almost 70% by 2050. Cities now account for around 70% of worldwide greenhouse gas emissions, and this percentage is predicted to rise in the near future as a result of projected increases in global urbanization patterns. It is widely acknowledged that irrational urban planning and design can increase emissions while also exacerbating threats and risks, resulting in a slew of environmental issues such as urban heat islands, air pollution, flooding, amongst other issues, as well as environmental, social, and economic losses. Therefore, these concerns must be addressed promptly in order to cope up with these rising difficulties and make urban environments safer for residents. With the advancement of remote sensing technology and the use of current remote observation systems, urban data science, remote sensing, and artificial intelligence (AI), modeling and quantifying emergent difficulties in urban regions and urban systems have become easy. They aid in the quantitative analysis of urban shape, functions, and human behavior in cities. Harvesting data, developing models, and suggesting new methodologies will be aided by combining urban ecology with new breakthroughs in data science. This book is of great value to a diverse group of academicians, scientists, students, environmentalists, meteorologists, urban planners, remote sensing and GIS experts with a common interest in geospatial sciences within the earth environmental sciences, as well as human and social sciences.

*Many Urbanisms* Martin J. Murray,2022-02-15 Winner, 2023 Choice Outstanding Academic Title Now, for the first time in history, the majority of the world’s population lives in cities. But urbanization is accelerating in some places and slowing down in others. The sprawling megacities of Asia and Africa, as well as many other smaller and medium-sized cities throughout the “Global South,” are expected to continue growing. At the same time, older industrial cities in wealthier countries are experiencing protracted socioeconomic decline. Nonetheless, mainstream urban studies continues to treat a handful of superstar cities in Europe and North America as the exemplars of world urbanism, even though current global growth and development represent a dramatic break with past patterns. Martin J. Murray offers a groundbreaking guide to the multiplicity, heterogeneity, and complexity of contemporary global urbanism. He identifies and traces four distinct pathways that characterize cities today: tourist-entertainment cities with world-class aspirations; struggling postindustrial cities; megacities experiencing hypergrowth; and “instant cities,” or master-planned cities built from scratch. Murray shows how these different types of cities respond to different pressures and logics rather than progressing through the stages of a predetermined linear path. He highlights new spatial patterns of urbanization that have undermined conventional understandings of the city, exploring the emergence of polycentric, fragmented, haphazard, and unbounded metropolises. Such cities, he argues, should not be seen as deviations from a norm but rather as alternatives within a constellation of urban possibility. Innovative and wide-ranging, *Many Urbanisms* offers ways to understand the disparate forms of global cities today on their own terms.

*Globalisation and Sustainable Development* Vladimir F. Krapivin,2007-07-05 This interdisciplinary book parameterizes the global ecodynamic process. The discussion considers basic global problems of the Nature-Society-System (NSS) dynamics and reviews key problems of ensuring its sustainable development. The book includes an analysis of trends in changing ecological systems and estimates characteristics of current global ecodynamics. The authors propose a new approach to NSS numerical modelling and demonstrate the results of modelling the dynamics of this

system's characteristics.

**Chilly Megapolis** Becky Allred,2020-01-19 When a schizophrenic renegade accidentally crosses two millennia to arrive in a horrifying future, she doesn't realize the key to her very survival is locked away in her own genetics. There are whispers of something cruel going on in the few remaining futuristic medical facilities. Though the population seems to be healthy and sickness is rumored to be a thing of the past, Amber knows if she is summoned by the doctors she has to get away. The voices screaming in her head tell her so. A soldier sent to keep her captive knows she will eventually be executed for her flaws. Charnickle will help her escape, but even he has a price. He tells her he loves her. Is he telling the truth, or are his words just another product of Amber's treacherous imagination? Will he really protect her? Or will she be left alone in the crossfire between two factions determined to annihilate each other? The doctors are getting closer to Amber's secrets. The exterminations are about to begin. War is imminent. Which voice will scream the loudest when death finally comes?
