Smart Sensors and Sensing Technology Gourab Sen Gupta,2008-07-01 Technological advancements in recent years have enabled the development of tiny, cheap disposable and self contained battery powered computers, known as sensor nodes or "motes", which can accept input from an attached sensor, process this input and transmit the results wirelessly to some interested device(s). When a number of these nodes work together, conceivably up to hundreds of thousands, a Wireless Sensor Network (WSN) is formed. Research in the area of wireless sensor networks has become increasingly wid- pread in recent years, partly due to their wide range of potential uses and also partly due to the fact that the technology enabling such networks is now widely available from many di?erent suppliers, such as: Crossbow, MoteIV, Intel and SUN (java based motes). These wireless sensor networks have the potential to allow a level of integration between computers and the physical world that, to date, has been virtually impos- ble. The uses for such

networks is almost limitless and include such diverse app- cations as a counter sniper system for urban warfare [1] tracking the path of a forest re [2], determining the structural stability of a building after an earthquake [3], or tracking people or objects inside a building [4], etc.

Software Engineering and Knowledge Engineering: Theory and Practice Yanwen Wu,2012-02-01 The volume includes a set of selected papers extended and revised from the I2009 Pacific-Asia Conference on Knowledge Engineering and Software Engineering (KESE 2009) was held on December 19~ 20, 2009, Shenzhen, China. Volume 2 is to provide a forum for researchers, educators, engineers, and government officials involved in the general areas of Knowledge Engineering and Communication Technology to disseminate their latest research results and exchange views on the future research directions of these fields. 135 high-quality papers are included in the volume. Each paper has been peer-reviewed by at least 2 program committee members and selected by the volume editor Prof.Yanwen Wu. On behalf of the this volume, we would like to express our sincere appreciation to all of authors and referees for their efforts reviewing the papers. Hoping you can find lots of profound research ideas and results on the related fields of Knowledge Engineering and Communication Technology.

  <u>Spacecraft that Explored the Inner Planets Venus and Mercury</u> Thomas Lund,2023-07-03 A series of increasingly capable spacecraft were sent to explore the inner planets Venus and Mercury. The history of that planetary exploration is traced in this book along with the evolution of sophisticated spacecraft that unveiled long-sought secrets of the planets. The spacecraft were ingenious and reflected the best efforts of talented people working with the available technology of the day. Additionally, this book showcases engineering involved in those capable machines. A consecutive series of 34 planetary spacecraft, which span the time period 1961 to 2021, are described. This includes the unsuccessful missions of several early spacecraft that paved the way for a better understanding of Venus' hostile environments. This book will describe many successful spacecraft sent to Venus by the Soviet Union and many successful spacecraft sent to Venus and to Mercury by the United States. The recent exploration of Venus by the European Space Agency's Venus Express and the Japanese spacecraft Akatsuki can also be found in this book. The author draws on over 50 years of experience on aircraft and spacecraft systems to tell the story of these planetary spacecraft. The spacecraft experience includes being the technical lead for the landing radars on the Surveyor and Apollo lunar landers as well as providing analyses for the rendezvous radar for the Space Shuttle. Practical engineering experience is augmented by Master's degrees in electrical engineering, physics, and business administration.

  Cross-platform UI Development with Xamarin.Forms Paul F. Johnson,2015-08-26 Create a fully operating application and deploy it to major mobile platforms using Xamarin.Forms About This Book Create standard user interfaces on Windows Mobile, Android, and iOS and then make those interfaces look good with ease Design a full-blown application in very little time with just about

the entire code being shared Learn how to access platform-specific features and still have the same core code with this handy guide Who This Book Is For This book is intended for mobile software developers who are fed up with having three different code sets for the same application. If you want to put your code on all mobile platforms with minimum fuss, and just want to develop but haven't got the time to be digging too far into a particular platform, this is the book for you. Basic knowledge of C# is assumed. What You Will Learn Create a responsive UI, modified to suit the target platform Understand the basics of designing an application, and the considerations needed for target platforms Construct a complete app using a single codebase Develop attractive user interfaces Bind information to the code behind to generate a reactive application Design an effective portable class library (PCL) Include a Windows Mobile application within your standard Xamarin.Forms application Extend your applications using the Xamarin.Forms Labs library In Detail Xamarin is an IDE used for the development of native iOS, Android, and Windows, and cross-platform mobile applications in C#. For the mobile developer, that means learning three different languages to create the same application. Even if you use the Xamarin toolchain, you still need to work with three different user interface construction sets. Xamarin is essentially a container in which developers can write any application in C# and use the Xamarin compiler to package and deploy on Android, iOS, or Windows platforms. To top this, Xamarin.Forms plays the role of a single codebase for mobile applications. This book will show you, with fully-coded examples, how to use both the Xamarin toolchain and the Xamarin.Forms library to code once for the three platforms. It goes from the concept and design of a mobile messenger application to its execution. You will be introduced to Messenger—the

messaging app—which includes key features such as push notifications, UI, maps, databases, and web services. Next, you will learn to plan the UI using Xamarin.Forms for cross-mobile platform development, and move on to creating custom buttons, extending the UI, and connecting to social sites such as Facebook and Twitter. You will also learn about the limitations of PCL libraries and how they make coding easier. This will be followed by the creation of a SQLite database and a database manager, and the SQLite database's reflection within the database manager. You will then be taken through the use of hardware features with ample coverage of iOS, Android, and Windows Mobile. Finally, the book will conclude by introducing common strategies that allow you to create applications that "just work" without having to reinvent the wheel each time. Style and approach A fun and informal approach to creating a mobile application using the most up-to-date cross-platform approach. Each coding chapter includes fully working code examples available for download from the Packt Publishing website.

Origins of Life Freeman Dyson,1999-09-28 How did life on earth originate? Did replication or metabolism come first in the history of life? In this book, Freeman Dyson examines these questions and discusses the two main theories that try to explain how naturally occurring chemicals could organize themselves into living creatures. The majority view is that life began with replicating molecules, the precursors of modern genes. The minority belief is that random populations of molecules evolved metabolic activities before exact replication existed. Dyson analyzes both of these theories with reference to recent important discoveries by geologists and chemists. His main aim is to stimulate experiments that could help to decide which theory is correct. This second edition covers the enormous advances that have been

made in biology and geology in the past and the impact they have had on our ideas about how life began. It is a clearly-written, fascinating book that will appeal to anyone interested in the origins of life.

Handbook of Conversation Design for Instructional Applications Luppicini, Rocci,2008-01-31 Given the rapid growth of computer-mediated communication, there is an ever-broadening range of social interactions. With conversation as the bedrock on which social interactions are built, there is growing recognition of the important role conversation has in instruction, particularly in the design and development of technologically advanced educational environments. The Handbook of Conversation Design for Instructional Applications presents key perspectives on the evolving area of conversation design, bringing together a multidisciplinary body of work focused on the study of conversation and conversation design practices to inform instructional applications. Offering multimodal instructional designers and developers authoritative content on the cutting-edge issues and challenges in conversation design, this book is a must-have for reference library collections worldwide.

Bridging the Information Gap Karl Ganzhorn,Sergio Faustoferri,2012-12-06 Small and medium enterprises (SMEs) in all industrial countries have a great need for technical and scientific data and product and market information. SMEs also produce useful information of mutual benefit for themselves. A proper and healthy development of SMEs in developing, as well as in many industrialized countries in Europe and elsewhere will require a number of support services, among which the development of infrastructural information services is a key element. Rapid progress in information technologies has reduced the cost and increased the availability of powerful workstations,

personal computers and new communication facilities. This has created new opportunities for using these and other appropriate technologies to conceive practical information services for SMEs. This book contains the proceedings of an international seminar on distri- buted database systems for SMEs held in Beijing, People's Republic of China, in May 1989. The seminar was organized as a joint undertaking of the Institute of Scientific and Technological Information of China (ISTIC), the United Nations Centre for Science and Technology for Development (CSTD) and the Commission of the European Communities (CEC). Recommendations cover operational concepts, methodology and technologies to be applied in the various stages of infrastructural evolution. Dr. Ganzhorn is a member of the United Nations Advisory Committee on Science and Technology for Development, a body composed of 28 personalities of repute with diverse backgrounds from all over the world. He is a former Director of Science and Technology of IBM Europe, an Honorary Professor at the University of Karlsruhe and a former President of the German Physical Society. Dr. Faustoferri is an Information Systems Officer of the United Nations Industrial Development Organization (UNIDO). At the time of the Beijing seminar, he was an Associate Expert with the United Nations Centre for Science and Technology for Development (CSTD).

Information Sources in Chemistry R. T. Bottle,J. F. B. Rowland,2011-12-01
The aim of each volume of this series Guides to Information Sources is to
reduce the time which needs to be spent on patient searching and to recommend
the best starting point and sources most likely to yield the desired
information. The criteria for selection provide a way into a subject to those
new to the field and assists in identifying major new or possibly unexplored
sources to those who already have some acquaintance with it. The series
attempts to achieve evaluation through a careful selection of sources and
through the comments provided on those sources.

Embedded and Ubiquitous Computing - EUC 2005 Laurence T. Yang,Makoto
Amamiya,Zhen Liu,Minyi Guo,Franz J. Rammig,2005-11-24 Welcome to the
proceedings of the 2005 IFIP International Conference on - bedded and
Ubiquitous Computing (EUC 2005), which was held in Nagasaki, Japan, December
6-9, 2005. Embedded and ubiquitous computing is emerging rapidly as an
exciting new paradigm to provide computing and communication services all the
time, - erywhere. Its systems are now pervading every aspect of life to the
point that they are hidden inside various appliances or can be worn
unobtrusively as part of clothing and jewelry. This emergence is a natural
outcome of research and technological advances in embedded systems, pervasive
computing and c- munications, wireless networks, mobile computing,
distributed computing and agent technologies, etc. Its tremendous impact on

academics, industry, gove- ment, and daily life can be compared to that of electric motors over the past century, in fact it but promises to revolutionize life much more profoundly than elevators, electric motors or even personal computers. The EUC 2005 conference provided a forum for engineers and scientists in academia, industry, and government to address profound issues including te- nical challenges, safety, and social, legal, political, and economic issues, and to present and discuss their ideas, results, work in progress, and experience on all aspects of embedded and ubiquitous computing.
