**Directory of Solar-terrestrial Physics Monitoring Stations**, 1977 This Directory of Monitoring Sun-Earth Environment (MONSEE) Stations contains detailed information about a number of worldwide continuously monitoring stations in the network of solar-terrestrial physics disciplines. Most of the information comes from the 'Questionnaires for MONSEE Station Directory' which were returned to the International Council of Scientific Unions' (ICSU) Special Committee on Solar-Terrestrial Physics Secretary. This directory is intended to bridge the gap between the availability of continuously monitored solar-terrestrial data and the awareness of possible users of these data. The structured format of each station entry provides some degree of homogeneity, and when familiar with this format, certain information can be located at a glance. Some station entries are more detailed than others, but all identify an additional source for more information about the station and the data. A total of 1032 individual entries are included in this directory covering the following disciplines of solar-terrestrial physics monitoring: solar and interplanetary phenomena, ionospheric phenomena, flare-associated events, geomagnetic variations, aurora, cosmic rays, and airglow.
