Podcasting Hacks Jack D. Herrington, 2005 Podcasting does for Internet audio listeners what TiVo does for television viewers--it puts you in charge of when you enjoy a program. Podcasting is a

web-based broadcast medium that sends audio content (most commonly in the MP3 format) directly to an iPod or other digital audio player. You subscribe to audio feeds, receive new files automatically, and listen to them at your convenience. As you can imagine, podcasting is taking the blogosphere by storm. A podcast is a professional-quality Internet radio broadcast, and like blogging and HTML before it, this revolutionary new way of publishing to the Internet has become the new outlet for personal expression. If you've got Internet access and a copy of *Podcasting Hacks*, you can find out just how easy it is to listen to and create your own Internet audio programs. With *Podcasting Hacks*, Jack Herrington, a software engineer with 20 years of experience developing applications using a diverse set of languages and tools, delivers the ultimate how-to of podcasting for anyone looking to get the most out of this hot new medium. Since August 2004 (the month that iPodder.com editor Adam Curry considers the start of podcasting), audio blogging has exploded. Podcasts cover every conceivable topic, including sex, relationships, technology, religion, home brewing, recreational drugs, rock 'n roll, food, entertainment, politics, and much more. There were podcasts from the Democratic National Convention in Fall 2004, and some programs on Air America and NPR are also podcasts. *Podcasting Hacks* offers expert tips and tools for blogging out loud—for transmitting (and receiving) audio content worldwide with ease. This groundbreaking volume covers both entry-level and advanced topics perfect for aspiring and experienced podcasters. Herrington shows you how to get started, create quality sound, use the right software, develop a great show, distribute a podcast, and build an audience. More advanced topics include audio editing, podcasting on the go, and even videocasting.

Learning english through ICT tools Silvia Sánchez Calderón, 2020-06-01 The present book has been written for teachers and students of English as a second language (L2, henceforth) and considers the three educational levels, namely, school, college and university. They will find it as a useful resource since it provides readers with insights, suggestions and approaches to implement the so-called Information and Communication Technology (ICT, henceforth) tools to develop the four language skills, namely, reading, writing, listening and speaking, along with a grammar knowledge. More specifically, this book will contribute to help L2 English teachers in designing creative and motivating lesson plans in which L2 English students will learn English through the use of ICT tools while developing several competences such as the digital competence, the learning to learn (that is to say, they learn by doing), autonomy and an active role given they are responsible for their own learning. In this student-centred approach, the teacher is a guide and a facilitator of resources. The resources described in this book will foster L2 English teachers and L2 English learning to consider that lesson plans are more effective when the teacher has determined the learning and teaching objectives for both ICT and English. A detailed explanation regarding how each ICT tool functions is provided in the corresponding chapters so that L2 English teachers are able to build standing selection criteria when applying each ICT tool in the classroom.

Learn while you sleep. Quickly, simply and effectively. Tony Gaschler, 2019-03-01 Everything that you want to or have to learn can be learned for the most part while you sleep, whether learning languages or any other kind of knowledge. Usually we allow ourselves eight hours' sleep a night. By the time you are celebrating your 60th birthday, you will have spent about 20 years

in bed. Don't restrict your learning to the daytime - use the night for learning, too! Without damaging your health or your well-being, you can now use part of this time to deepen and strengthen your knowledge and skills considerably. There are no limits placed on your learning objectives, here are just a few examples: - learn foreign languages and vocabulary - improve your grammatical knowledge - prepare for exams - practise formulas - deepen your specialist knowledge Learning more, for example in the area of foreign languages, is also of great importance for advanced learners. You can perfect your language knowledge of style, expression, grammatical combinations and word order. When it is possible to store texts to be learnt in your subconscious while you are asleep, it is also possible to fix suggestions there. In a specific sleep sequence, receptivity for suggestions is particularly good. This sequence is optimally used to remove negative habits and inhibitory patterns of behaviour and to replace these with positive characteristics. The possibilities here are also very varied, here are just some examples: - improving memory - weight loss in the case of overweight - strengthening self-confidence and self-awareness - improving performance and stamina - strength, relaxation and inner peace The text book Learn while you sleep provides you with the most useful examples of pre-defined sleep suggestions for your individual adaptation.

Data Warehouse Systems Alejandro Vaisman, Esteban Zimányi, 2022-08-16 With this textbook, Vaisman and Zimányi deliver excellent coverage of data warehousing and business intelligence technologies ranging from the most basic principles to recent findings and applications. To this end, their work is structured into three parts. Part I describes “Fundamental Concepts” including conceptual and logical data warehouse design, as well as querying using MDX, DAX and SQL/OLAP. This part also covers data analytics using Power BI and Analysis Services. Part II details “Implementation and Deployment,” including physical design, ETL and data warehouse design methodologies. Part III covers “Advanced Topics” and it is almost completely new in this second edition. This part includes chapters with an in-depth coverage of temporal, spatial, and mobility data warehousing. Graph data warehouses are also covered in detail using Neo4j. The last chapter extensively studies big data management and the usage of Hadoop, Spark, distributed, in-memory, columnar, NoSQL and NewSQL database systems, and data lakes in the context of analytical data processing. As a key characteristic of the book, most of the topics are presented and illustrated using application tools. Specifically, a case study based on the well-known Northwind database illustrates how the concepts presented in the book can be implemented using Microsoft Analysis Services and Power BI. All chapters have been revised and updated to the latest versions of the software tools used. KPIs and Dashboards are now also developed using DAX and Power BI, and the chapter on ETL has been expanded with the implementation of ETL processes in PostgreSQL. Review questions and exercises complement each chapter to support comprehensive student learning. Supplemental material to assist instructors using this book as a course text is available

online and includes electronic versions of the figures, solutions to all exercises, and a set of slides accompanying each chapter. Overall, students, practitioners and researchers alike will find this book the most comprehensive reference work on data warehouses, with key topics described in a clear and educational style. "I can only invite you to dive into the contents of the book, feeling certain that once you have completed its reading (or maybe, targeted parts of it), you will join me in expressing our gratitude to Alejandro and Esteban, for providing such a comprehensive textbook for the field of data warehousing in the first place, and for keeping it up to date with the recent developments, in this current second edition." From the foreword by Panos Vassiliadis, University of Ioannina, Greece.
