Advances in Databases and Information Systems Leonid Kalinichenko,Rainer Manthey,Bernhard Thalheim,Uwe Wloka,2003-10-02 This volume contains 29 submitted and 2 invited papers presented at the tenth East-European Conference on Advances in Databases and Information Systems (ADVIS 2003), which took place in Dresden, Germany, September 3–6, 2003. An international program committee of 42 members from 24 countries selected these contributions from 86 submissions. Eight additional contributions were selected as short papers and have been published in a separate volume of local proceedings by the organizing institution. For the first time, ADBIS also included an industrial program consisting of nine submitted presentations by representatives of commercial companies active in the database market. ADBIS 2003 was the tenth scientific event taking place under the acronym ADBIS, and thus marks a first “jubilee” for this young, but by now well-established, series of conferences. ADBIS was founded by the Moscow ACM SIGMOD Chapter in 1993. In 1994–1996 ADBIS was held in the form of workshops organized by the MOSCOW ACM SIGMOD Chapter in collaboration with the Russian Foundation for Basic Research. In this period, a number of international guests were invited to Moscow every year in order to improve and consolidate contacts between the national research community in Russia and the research community worldwide. International program committees for ADBIS were established in 1995, contributing to the quality of the selection process and thus of the conference contributions in general. In 1996, following discussions with Dr.

**Material Balances for Chemical Reacting Systems** R.L. Cerro,B.G. Higgins,S. Whitaker,2022-12-05 Written for use in the first course of a typical chemical engineering program, Material Balances for Chemical Reacting Systems introduces and teaches students a rigorous approach to solving the types of macroscopic balance problems they will encounter as chemical engineers. This first course is generally taken after students have completed their studies of calculus and vector analysis, and these subjects are employed throughout this text. Since courses on ordinary differential equations and linear algebra are often taken simultaneously with the first chemical engineering course, these subjects are introduced as needed. Teaches readers the fundamental concepts associated with macroscopic balance analysis of multicomponent, reacting systems Offers a novel and scientifically correct approach to handling chemical reactions Includes an introductory approach to chemical kinetics Features many worked out problems, beginning with those that can be solved by hand and ending with those that benefit from the use of computer software This textbook is aimed at undergraduate chemical engineering students but can be used as a reference for graduate students and professional chemical engineers as well as readers from environmental engineering and bioengineering. The text features a solutions manual with detailed solutions for all problems, as well as PowerPoint lecture slides available to adopting professors.

**Advanced Finite Element Method in Structural Engineering** Yu-Qiu Long,Song Cen,Zhi-Fei Long,2009-09-29 Advanced Finite Element Method in Structural Engineering systematically introduces the research work on the Finite Element Method (FEM), which was completed by Prof. Yu-qiu Long and his research group in the past 25 years. Seven original theoretical achievements - for instance, the Generalized Conforming Element method, to name one - and their applications in the fields of structural engineering and computational mechanics are discussed in detail. The book also shows the new strategies for avoiding five difficulties that exist in traditional FEM (shear-locking problem of thick plate elements; sensitivity problem to mesh distortion; non-convergence problem of non-conforming elements; accuracy loss problem of stress solutions by displacement-based elements; stress singular point problem) by utilizing foregoing achievements.
