Financial Cryptography and Data Security Roger Dingledine, Philippe Golle, 2009-07-21 This volume contains the proceedings of the 13th International Conference on Financial Cryptography and Data Security, held at the Accra Beach Hotel and Resort, Barbados, February 23–26, 2009. Financial Cryptography and Data Security (FC) is a well-established international forum for research, advanced development, education, exploration and debate regarding information assurance in the context of finance and commerce. The conference covers all aspects of securing transactions and systems. The goal of FC is to bring security and cryptography researchers and practitioners together with economists, bankers, and policy makers. This year, we assembled a vibrant program featuring 21 peer-reviewed research paper presentations, two panels (on the economics of information security and on authentication), and a keynote address by David Dagon. Despite a proliferation of security and cryptography venues, FC continues to receive a large number of high-quality submissions. This year, we received 91 submissions (75 full-length papers, 15 short papers and 1 panel). Each submission was reviewed by at least three reviewers. Following a rigorous selection, ranking and discussion process, the Program Committee accepted 20 full-length papers, 1 short paper and 1 panel. The overall acceptance rate was 24%.

Technological Nature Peter H. Kahn, Jr., 2011-02-25 Why it matters that our relationship with nature is increasingly mediated and augmented by technology. Our forebears may have had a close connection with the natural world, but increasingly we experience technological nature. Children come of age watching digital nature programs on television. They inhabit virtual lands in digital games. And they play with robotic animals, purchased at big box stores. Until a few years ago, hunters could telehunt—shoot and kill animals in Texas from a computer anywhere in the world via a Web interface. Does it matter that much of our experience with nature is mediated and augmented by technology? In *Technological Nature*, Peter Kahn argues that it does, and shows how it affects our well-being. Kahn describes his investigations of children's and adults' experiences of cutting-edge technological nature. He and his team installed technological nature windows (50-inch plasma screens showing high-definition broadcasts of real-time local

nature views) in inside offices on his university campus and assessed the physiological and psychological effects on viewers. He studied children's and adults' relationships with the robotic dog AIBO (including possible benefits for children with autism). And he studied online telegardening (a pastoral alternative to telehunting). Kahn's studies show that in terms of human well-being technological nature is better than no nature, but not as good as actual nature. We should develop and use technological nature as a bonus on life, not as its substitute, and re-envision what is beautiful and fulfilling and often wild in essence in our relationship with the natural world.

Sensehacking Charles Spence, 2021-01-14 The world expert in multisensory perception on the remarkable ways we can use our senses to lead richer lives 'Talks total sense, lots of fun facts, right up there with the best of the best' Chris Evans 'Packed with studies on pain, attention, memory, mood' The Times How can the furniture in your home affect your wellbeing? What colour clothing will help you play sport better? And what simple trick will calm you after a tense day at work? In this revelatory book, pioneering and entertaining Oxford professor Charles Spence shows how our senses change how we think and feel, and how by 'hacking' them we can reduce stress, become more productive and be happier. We like to think of ourselves as rational beings, and yet it's the scent of expensive face cream that removes wrinkles (temporarily), a room actually feels warmer if you use a warmer paint colour, and the noise of the crowd really does affect the referee's decision. Understanding how our senses interact can produce incredible results. This is popular science at its unbelievable best. Playing Nature Alenda Y. Chang, 2019-12-31 A potent new book examines the overlap between our ecological crisis and video games. Video games may be fun and immersive diversions from daily life, but can they go beyond the realm of entertainment to do something serious—like help us save the planet? As one of the signature issues of the twenty-first century, ecological deterioration is seemingly everywhere, but it is rarely considered via the realm of interactive digital play. In *Playing Nature*, Alenda Y. Chang offers groundbreaking methods for exploring this vital overlap. Arguing that games need to be understood as part of a cultural response to the growing ecological crisis, *Playing Nature* seeds conversations around key environmental science concepts and terms. Chang suggests several ways to rethink existing game taxonomies and theories of agency while revealing surprising fundamental similarities between game play and scientific work. Gracefully reconciling new media theory with environmental criticism, *Playing Nature* examines an exciting range of games and related art forms, including historical and contemporary analog and digital games, alternate- and

augmented-reality games, museum exhibitions, film, and science fiction. Chang puts her surprising ideas into conversation with leading media studies and environmental humanities scholars like Alexander Galloway, Donna Haraway, and Ursula Heise, ultimately exploring manifold ecological futures—not all of them dystopian.
