Unifying Petri Nets Hartmut Ehrig, Gabriel Juhas, Julia Padberg, Grzegorz Rozenberg, 2003-06-30 Since their introduction nearly 40 years ago, research on Petri nets has diverged in many different directions. Various classes of Petri net, motivated either by theory or applications, with its own specific features and methods of analysis, have been proposed and studies in depth. These successful developments have led to a very heterogeneous landscape of diverse models, and this, in turn, has stimulated research on concepts and approaches that contribute to unifying and structuring the diverse landscape. This state-of-the-art survey presents the most relevant approaches to unifying Petri nets in a systematic and coherent way. The 14 chapters written by leading researchers are organized in topical sections on application-oriented approaches, unifying frameworks, and theoretical approaches.

Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport Management Association, Information Resources, 2020-09-24 As with other transportation methods, safety issues in aircraft can result in a total loss of life. Recently, the air transport industry has come under immense scrutiny after several deaths occurred due to aircraft design and airlines that allowed improperly inspected aircraft to fly. Spacecraft too have found errors in system software that could lead to catastrophic failure. It is imperative that the aviation and aerospace industries continue to revise and refine safety protocols from the construction and design of aircraft, to secure and improve aviation systems, and to test and inspect aircraft. The Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport is a vital reference source that examines the latest scholarly material on the use of adaptive and assistive technologies in aviation to establish clear guidelines for the design and implementation of such technologies to better serve the needs of both military

and civilian pilots. It also covers new information technology use in aviation systems to streamline the cybersecurity, decision making, planning, and design processes within the aviation industry. Highlighting a range of topics such as air navigation systems, computer simulation, and airline operations, this multi-volume book is ideally designed for pilots, scientists, engineers, aviation operators, air traffic controllers, air crash investigators, teachers, academicians, researchers, and students.

High-level Petri Nets Kurt Jensen, Grzegorz Rozenberg, 2012-12-06 High-level Petri nets are now widely used in both theoretical analysis and practical modelling of concurrent systems. The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable de scriptions than can be obtained by means of low-level Petri nets-while, on the other hand, they still offer a wide range of analysis methods and tools. The step from low-level nets to high-level nets can be compared to the step from assembly languages to modem programming languages with an elaborated type concept. In low-level nets there is only one kind of token and this means that the state of a place is described by an integer (and in many cases even by a boolean value). In high-level nets each token can carry complex information which, e. g., may describe the entire state of a process or a data base. Today most practical applications of Petri nets use one of the different kinds of high-level nets. A considerable body of knowledge exists about high-level Petri nets this includes theoretical foundations, analysis methods and many applications. Unfortunately, the papers on high-level Petri nets have been scattered throughout various journals and collections. As a result, much of this knowledge is not readily available to people who may be interested in using high-level nets.

<u>Using Aspect-Oriented Programming for Trustworthy Software Development</u> Vladimir O. Safonov, 2008-06-09 Learn how to successfully implement trustworthy computing tasks using aspect-oriented programming This landmark publication fills a gap in the literature by not only describing the basic concepts of trustworthy computing (TWC) and aspectoriented programming (AOP), but also exploring their critical interrelationships. The author clearly demonstrates how typical TWC tasks such as security checks, in-and-out conditions, and multi-threaded safety can be implemented using AOP. Following an introduction, the book covers: Trustworthy computing, software engineering, and computer science Aspect-oriented programming and Aspect.NET Principles and case studies that apply AOP to TWC Coverage includes Aspect.NET, the AOP framework developed by the author for the Microsoft.NET platform, currently used in seventeen countries. The author discusses the basics of Aspect.NET architecture, its advantages compared to other AOP tools, and its functionality. The book has extensive practical examples and case studies of trustworthy software design and code using the Aspect.NET framework. In addition, the book explores other software technologies and tools for using AOP for trustworthy software development, including Java and AspectJ. This book also includes a valuable chapter dedicated to ERATO, the author's teaching method employed in this book, which has enabled thousands of students to quickly grasp and apply complex concepts in computing and software engineering, while the final chapter presents an overall perspective on the current state of AOP and TWC with a view toward the future. Software engineers, architects, developers, programmers, and students should all turn to this book to learn this tested and proven method to create more secure, private, and reliable computing.

Automated Systems in the Aviation and Aerospace Industries Shmelova, Tetiana, Sikirda, Yuliya, Rizun, Nina, Kucherov, Dmytro, Dergachov, Konstantin, 2019-03-22 Air traffic controllers need advanced information and automated systems to provide a safe environment for everyone traveling by plane. One of the primary challenges in developing training for automated systems is to determine how much a trainee will need to know about the underlying technologies to use automation safely and efficiently. To ensure safety and success, task analysis techniques should be used as the basis of the design for training in automated systems in the aviation and aerospace industries. Automated Systems in the Aviation and Aerospace Industries is a pivotal reference source that provides vital research on the application of underlying technologies used to enforce automation safety and efficiency. While highlighting topics such as expert systems, text mining, and human-machine interface, this publication explores the concept of constructing navigation algorithms, based on the use of video information and the methods of the estimation of the availability and accuracy parameters of satellite navigation. This book is ideal for aviation professionals, researchers, and managers seeking current research on information technology used to reduce the risk involved in aviation.

Turning 18 with confidence Rui Gomes, 2023-04-01 A practical guide to the Council of Europe Recommendation CM/Rec(2019)4 to raise awareness and improve the knowledge and capacities of relevant professionals in supporting young refugees and migrants in their transition to adulthood. Being among the most vulnerable, many young refugees experience violence, exploitation and trauma, as well as continued risk of violation of their human rights and fundamental freedoms. When they reach the age of 18, they are no longer under the protection of the United Nations Convention on the Rights of the Child. This means that, from this point, young refugees may no longer have the protection and access to rights and opportunities previously held as children, and they can face an abrupt and dramatic change in the possibility of accessing services and support across many sectors. The rights of young refugees in transition to adulthood has been a priority of the Council of Europe over many years. In 2019, the Committee of Ministers adopted Recommendation CM/Rec(2019)4 on Supporting Young Refugees in Transition to Adulthood, recommending that member states' governments ensure that additional temporary support is available to young refugees after the age of 18 to enable them to access their rights. The Recommendation also acknowledges the important role played by youth work and non-formal education / learning in supporting the inclusion of young refugees, and in developing competences for active citizenship and democratic participation. The Council of Europe prepared this Guide to further promote and support the implementation of the Recommendation. The Guide should inspire young refugees, youth workers, policymakers, researchers and other relevant actors to familiarise themselves with, apply and support the implementation of the Recommendation in their own contexts and communities. The Guide simplififies the language of the Recommendation in order to assist various actors and stakeholders in developing a better and clearer understanding of the proposals and policy measures. A range of promising practices are likewise incorporated to exemplify how the Recommendation is being put into practice.
