Investigating Student Netbook Usage Using Activity Theory Kevin Michael Larkin, 2010 Abstract : Access to information and communication technologies (ICT) by students for learning has been acknowledged as being important in the 21st Century. Governments, education systems and schools have been moving to greater levels of access, including students having 1:1 computing access, referred to as ubiquitous or uLearning. As schools move to 1:1 computing, research is required to inform the design and provision of access and usage by students. This study sought to determine whether or not ubiquitous access to netbook computers equated to ubiquitous usage of the devices and whether or not varying the pattern and ratio of access affected the uptake and impact of netbook usage. It also sought to determine whether or not netbooks were an appropriate computing device for early adolescent learners, and whether or not the use of the netbooks affected the classroom environment. Specifically, it examined the impact of the netbooks on student productivity, social activity, teacher control and individual learning. It also sought to further establish whether or not Activity Theory (AT) was an appropriate methodological and conceptual framework for classroom based research. Four classrooms received the netbooks in one of the following four patterns: 1:1 student to netbook access - 5 days per week for 6 weeks; 1:1 student to netbook access - 3 days per week for 10 weeks; 1:2 student to netbook access - 5 days per week for 6 weeks; and, 1:2 student to netbook access - 3 days per week for 10 weeks. The study drew upon AT as the conceptual framework and employed a mixed method

methodology. The study, conducted in a South East Queensland Catholic Primary School, involved 120 Year 7 students and four classroom teachers. Throughout the 2009 school year data were collected about the students, the teachers, and the classroom environments via interviews, student forums, surveys, questionnaires, data logging software, researcher diary and classroom observations. Questionnaire data relating to classroom environments were analysed using SPSS and statistical significance determined using t-tests and correlational analysis. Interview, survey and observational data were initially coded using six Activity Theory nodes (Subject, Object, Tools, Division of Labour, Community and Rules and the eight NCEI sub-scales (Involvement, Innovation, Teacher Control, Teacher Support, Order and Organisation, Competition, Affiliation and Group Work. As analysis continued, further nodes emerged including student productivity, Technological Pedagogical Content Knowledge (TPACK) and the crowded curriculum. NVivo was utilised to assist in this analysis. The study found that ubiquitous access did not equate to ubiquitous use with average daily use of the netbooks of between 60 90 minutes. The netbooks were considered as an appropriate computing device by the students and teachers in this study and provided a balance between mobility and functionality. Statistically significant changes occurred in three classrooms. These changes related to Order and Organisation in one classroom and Teacher Control and Involvement in two classrooms. The use of the netbooks had significant impact on student productivity and social activity but no impact on individualised learning. Minor changes occurred to teacher pedagogy in two of the classrooms. Varying the pattern and ratio of use was a significant factor in the findings noted above and the study recommends the allocation of computers in a 1:2 rather than 1:1 ratio. This research is significant as it can inform other primary schools as they determine the most effective means in which to utilise new mobile technologies. It is also relevant to informing secondary schools as they consider the

implementation of the Digital Education Revolution (DER). This research also informs the broader debate as to whether or not 1:1 distribution of computers is most efficacious in terms of student outcomes and whether or not netbooks are an appropriate computing solution for early adolescent students.

Advances in Software Engineering Haeng-kon Kim, Muhammad Khurram Khan, Akingbehin Kiumi, Wai-chi Fang, Dominik Ślęzak, 2010-11-26 Welcome to the Proceedings of the 2010 International Conference on Advanced Software Engineering and Its Applications (ASEA 2010) – one of the partnering events of the Second International Mega-Conference on

Future Generation Information Technology (FGIT 2010). ASEA brings together researchers from academia and industry as well as practitioners to share ideas, problems and solutions relating to the multifaceted aspects of software engineering, including its links to computational sciences, mathematics and information technology. In total, 1,630 papers were submitted to FGIT 2010 from 30 countries, which includes 175 papers submitted to ASEA 2010. The submitted papers went through a rigorous reviewing process: 395 of the 1,630 papers were accepted for FGIT 2010, while 40 papers were accepted for ASEA 2010. Of the 640 papers were selected for the special FGIT 2010 volume published by Springer in the LNCS series. 32 papers are published in this volume, and 2 papers were withdrawn due to technical reasons. We would like to acknowledge the great effort of the ASEA 2010 International Advisory Board and members of the International Program Committee, as well as all the organizations and individuals who supported the idea of publishing this volume of proceedings, including SERSC and Springer. Also, the success of the conference would not have been possible without the huge support from our sponsors and the work of the Chairs and Organizing Committee.

Chintrepreneurship or Shanzhai Model Jiangning

Zhao,2023-04-18 Theoretically, the formational and developmental mechanism of Shanzhai Model (the Chintrepreneurship, the China-way of Doing Business) theorized in this text, in addition to complying with the traditionally Western dominated frameworks of risk-taking-oriented, technology-oriented, resource-oriented, and speculation-oriented – also creates the peculiar or updated characteristics, complementary and supplementary to the existing theories of entrepreneurship and strategic management. The peculiar characteristics of Shanzhai Model may be attributed to the government policy guidance, from macroeconomic level, to technology development level, and to market expansion level, through the regulated cycle process of CCP government ‘Five-Year-Plan’. Such a dynamic

process of government policy system determines the dynamisms of China economy, industry and enterprises, linking the previous weaknesses into the upgrade or rectification of the next five-year-plan, forcing enterprises to obligately upgrade or adjust their business and management operations (given the absolute autocracy of China government). Practically, the imitation-based cost-saving operations on the enterprise level, the 'Wolf Like' clustered industry-chain operations organized by the principle of 'Risks-Resources-Benefits Sharing' on the industry level, and the 'Price-to-Performance' products advantages on the market level - together, they have been contributing to the leapfrog of China economy, by taking advantages of increasingly globalized business environment and the network (Internet) information technology system, turning China into an economic Shanzhai, corruption Shanzhai, and a political Shanzhai, imposing the 'One Belt One Road' hegemonism on the harmony of international community. Is it too late? The contribution of this text material may benefit MBA, Ph.D students in management, and especially benefiting to those corporate executives. Regardless of De-Globalization or De-China campaigns, the flow of business is inevitably and eternally beyond the boundaries of countries one way or another, sooner or later. Note that, a document of year-to-year government policies is prepared, interested, contact Dr. Johnny by email: jiangning.zhao@yahoo.com; or by phone: 001-604-773-0783, or 001-778-655-1016.
