*Net Present Value and Risk Modelling for Projects* Martin Hopkinson, 2017-03-02 The Net Present Value (NPV) forecast lies at the heart of the business case on many projects. Martin Hopkinson's guide explains when, why and how NPV models should be built for projects and how this approach can be integrated with the risk management process. NPV models tend to be used during the earliest phases of a project as the business case is being developed. Typically, these are the stages when uncertainty is at its highest and when the opportunities to influence the project's plan are at their greatest. This book shows how project financial forecasting and risk management principles can be used to both improve NPV forecasts and to shape the project solution into one that is risk-robust. The text is sufficiently broad to be practicable for first-time users to employ the methods described. But it also contains insights into the process that are likely to be new to the majority of experienced practitioners. All users should find that the models used in this book will help to provide useful templates for exploiting the techniques that are used.

**Anomalies in Net Present Value, Returns and Polynomials, and Regret Theory in Decision-Making** Michael C. I. Nwogugu, 2017-06-09 This book explores why Modified Internal Rate of Return (MIRR) and Net Present Value (NPV) are not necessarily accurate or efficient tools for valuation and decision-making. The author specifically addresses the biases and framing effects inherent in the NPV/MIRR/IRR model and in related approaches such as Adjusted Present Value (APV), Net Future Value (NFV), and by extension, Polynomials. In doing so, the book presents new ways of solving higher order polynomials using invariants and homomorphisms and explains why the "Fundamental Theorem of Algebra", the Binomial Theorem and the "Descartes Sign Rule" are unreliable. Chapters also discuss how International Asset Pricing Theory (IAPT) and Intertemporal Capital Asset Pricing Models (ICAPM) can produce inaccurate results in certain circumstances. The conditions under which ICAPM and IAPT may be accurate are described; as well as why those conditions cannot, or are unlikely to, exist. The conditions under which negative interest rates may exist or are justified are also outlined. Moreover, the author explains why traditional Consumption-Savings-Investment-Production models of allocation can be inefficient, and then introduces a new model of allocation that can be applied to individuals, households and companies. Finally, the book explains why the Elasticity of Intertemporal Substitution is a flawed concept and introduces the Marginal Rate of Intertemporal Joint Substitution as a solution.

*The National Popular Vote (NPV) Initiative* Andrew Nolan, Thomas H Neale, 2019-11-03 The National Popular Vote (NPV) initiative proposes an agreement among the states, an interstate compact that would effectively achieve direct popular election of the President and Vice President without a constitutional amendment. It relies on the Constitution's grant of authority to the states in Article II, Section 1 to appoint presidential electors in such Manner as the Legislature thereof may direct.... Any state that joins the NPV compact pledges that if the compact comes into effect, its legislature will award all the state's electoral votes to the presidential ticket that wins the most popular votes nationwide, regardless of who wins in that particular state. The compact would, however, come into effect only if its success has been assured; that is, only if states controlling a majority of electoral votes (270 or more) join the compact. At present, 15 states and the District of Columbia, jointly accounting for 196 electoral votes, have joined the compact. Adoption of the compact in the states has been uneven: after approval by 8 states and the District of Columbia between 2007 and 2011, the pace slowed, but since 2018, the compact has regained momentum as 5 additional states with 31 electoral votes joined. As of October 2019, NPV legislation was pending in 2 states with a total of 25 electoral votes where the legislature was in session. In 5 other states with 45 votes, NPV remained live and eligible to be carried over for consideration when their legislatures reconvene for their 2020 session. Opposition has emerged in some states.
