DW 2.0: The Architecture for the Next Generation of Data Warehousing W.H. Inmon, Derek Strauss, Genia Neushloss, 2010-07-28 DW 2.0: The Architecture for the Next Generation of Data Warehousing is the first book on the new generation of data warehouse architecture, DW 2.0, by the father of the data warehouse. The book describes the future of data warehousing that is technologically possible today, at both an architectural level and technology level. The perspective of the book is from the top down: looking at the overall architecture and then delving into the issues underlying the components. This allows people who are building or using a data warehouse to see what lies ahead and determine what new technology to buy, how to plan extensions to the data warehouse, what can be salvaged from the current system, and how to justify the expense at the most practical level. This book gives experienced data warehouse professionals everything they need in order to implement the new generation DW 2.0. It is designed for professionals in the IT organization, including data architects, DBAs, systems design and development professionals, as well as data warehouse and knowledge management professionals. * First book on the new generation of data warehouse architecture, DW 2.0. * Written by the father of the data warehouse, Bill Inmon, a columnist and newsletter editor of The Bill Inmon Channel on the Business Intelligence Network. * Long overdue comprehensive coverage of the implementation of technology and tools that enable the new generation of the DW: metadata, temporal data, ETL, unstructured data, and data quality control.

Knowledge Management Ashok Jashapara, 2004 As we move towards an increasingly knowledge-based economy, the ability to manage knowledge becomes a matter of competitive survival. Whilst current literature addresses the subject only partially, from a human resource, information systems or practitioner perspective, this is the first textbook to bring together and integrate all these dimensions. Knowledge Management: An Integrated Approach is centred around five parts of the knowledge cycle - discovering knowledge, generating knowledge, evaluating knowledge, sharing knowledge and leveraging knowledge. The blend of theory and practice makes this the ideal resource for students studying knowledge management courses within business management, information science and computer science degrees at both undergraduate and postgraduate levels. Key features bull; bull; The first truly integrated approach to knowledge management offers the student the most realistic and complete perspective. bull; Case studies and vignettes from a range of sectors and organisations illustrate the theory in practice. bull; The comprehensive coverage offers an accessible bridge between disciplines for students and practitioners in the fields of human resource management, information systems and strategic management. bull; Chapters on intellectual capital and the philosophy of knowledge demonstrate the breadth of coverage from the evolution of the subject area to the leading edge of contemporary research. bull; Learning outcomes, exercises and questions for further thought stimulate the reader and encourage them to reflect on their learning. 'This is an excellent book which manages to combine a consideration of the philosophy of knowledge with the practical discussion of what it means to 'manage knowledge' in an organisational context. The book integrates many disparate strands from the literature and in doing so provides a comprehensive and coherent coverage of this emerging area.' Professor Sue Newell, Trustee Professor, Department of Management, Bentley College, USA 'This book provides a very useful summary of key works and current debates in the fields of organisational learning and knowledge management. It will be of value both to new students and to experienced scholars who are looking for a succinct overview of the field.' Professor Mark Easterby-Smith, Professor of Management Learning, School of Management, Lancaster University, UK and Chair, British Academy of Management Dr Ashok Jashapara is an internationally recognised expert in the field of knowledge management and Chair of the Knowledge Management Research Group at Loughborough University. He has considerable consultancy experience in Europe and the United States and has recently completed a knowledge management assignment for the United Nations in the Far East. He is Senior Lecturer in Knowledge Management in the most prestigious and highly rated information science department in the UK. He has published widely in leading books and journals and has won a number of awards for his writing.

Principles of Data Mining David J. Hand, Heikki Mannila, Padhraic Smyth, 2001-08-17 The first truly interdisciplinary text on data mining, blending the contributions of information science, computer science, and statistics. The growing interest in data mining is motivated by a common problem across disciplines: how does one store, access, model, and ultimately describe and understand very large data sets? Historically, different aspects of data mining have been addressed independently by different disciplines. This is the first truly interdisciplinary text on data mining, blending the contributions of information science, computer science, and statistics. The book consists of three sections. The first, foundations, provides a tutorial overview of the principles underlying data mining algorithms and their application. The presentation emphasizes intuition rather than rigor. The second section, data mining algorithms, shows how algorithms are constructed to solve specific problems in a principled manner. The algorithms covered include trees and rules for classification and regression, association rules, belief networks, classical statistical models, nonlinear models such as neural networks, and local memory-based models. The third section shows how all of the preceding analysis fits together when applied to real-world data mining problems. Topics include the role of metadata, how to handle missing data, and data preprocessing.
