SURGE ANALYSIS AND THE WAVE PLAN METHOD Srinivasa Lingireddy, Don J.

Wood, 2021-06-14 The book describes the causes and effects of transient (water hammer) events in liquid-filled pipes, and describes how the powerful and stable Wave Plan Method (WPM) can be used to address transients during surge modeling. The authors compare and contrast WPM with the Method of Characteristics (MOC), which is the other widely-used surge analysis tool. While MOC can be useful for many situations, the larger and more complex a model becomes, the more the computational efficiency of WPM is necessary to avoid longer and longer analysis times. The authors also describe how WPM is more generalizable than MOC, which is a term that describes a suite of tools consisting of several variants that were developed to address different modeling situations. This book provides details on surge modeling in general and the use of WPM in particular. This includes pressure attenuation, determination of wave speeds in different pipe types and various liquid media, pump and turbine characteristics curves, and the effects of boundary conditions. The discussion of boundary

conditions includes an extensive look at the effects of the air-water interface as it applies to bulk air intrusion into pipelines, and as it relates to the use of air/vacuum valves as surge protection. The authors discuss surge protection design for different real-world scenarios, and how to model of a full list of surge control devices, including a detailed discussion of check valves. Last, the book describes the assumptions and uncertainties encountered during data collection and model building, and examines the potential effect of these uncertainties. Where uncertainties cannot be mitigated, the authors discuss ways to increase the safety factor of surge protection designs.

The Handbook of Large Group Methods Barbara Benedict Bunker, Billie T. Alban, 2012-06-26

Large Group Interventions are methods used to gather a whole system together to discuss and take action on the target agenda. That agenda varies from future plans, products, and services, to redesigning work, to discussion of troubling issues and problems. The Handbook of Large Group Methods takes the next step in demonstrating through a series of cases how Large Group Methods are currently being used to address twenty-first-century challenges in organizations and communities today, including: Working with widely dispersed organizations, and the problem of involvement and participation Working with organizations facing a serious business crisis Working with organizations in polarized and politicized environments Working in community settings with diverse interest groups Working at the global level and adapting these methods for cross-cultural use Embedding and sustaining new patterns of working together in organizations and communities

Contemplative Thoughts of an Asian Seminarian (Paperback) Seamus Phan, 2008-05 Paperback revised version. This humble book is Fr. Seamus' learning journey as a seminarian when he received

God's call to serve, where he related his humble views on denominations, contemplation, early Christian thought, systematic theology, charismas, sacraments, discipleship, syncretism, and how to minister in the East, drawing inspiration from Jesuit priest Matteo Ricci and Trappist monk Thomas Merton, as well as the early Church Fathers.

Listening to the Neighbor Byungohk Lee,2015-05-12 The Trinity can be understood as a social community with members speaking and listening to one another in love, or, as Luther understood the Trinity, as conversation, then God's mission essentially involves in mission-in-dialogue. Byungohk Lee contends the church has to embrace the dialogical dimension in missional terms because the triune God is the subject of mission. The missional church conversation has taken it for granted that local churches should speak and listen to their neighbors. In contrast, for many churches in Asia, including Korea, mission has generally tended to be practiced in a monological, rather than dialogical, manner. The neighbor has not been regarded as a conversational partner of the church, but only as the object

for its mission. In *Listening to the Neighbor* Lee shows that some local churches have participated in God's mission by listening to their neighbors. He argues that listening is not a technique, but a multifaceted learning process in missional terms. The church must nurture its hearts, eyes, and ears in order to listen to the sigh of its neighbors.

Arms Control and Europe Polina Sinovets, William Alberque, 2022-08-08 This book examines the recent changes in strategic stability, caused by the collapse of the international security architecture. Against the background of Russia's invasion of Ukraine, international experts discuss topics and critical issues such as the revanchist strategy of Russia and the readiness of the United States (US) and Europe to give an adequate response; the influence of new technologies in the future of nuclear deterrence; and the crumbling of the arms control and nonproliferation system under the new challenges. The book explains how the combination of these factors lead to a crucial change of strategic stability and the international security landscape, the first such change since the end of the Cold War. Divided into three parts, the book presents timely analyses on (1) US, Russia: New

Challenges and Strategic Stability in Europe; (2) Extended Deterrence and Arms Control in Europe; and (3) Regional Dimensions of Strategic Stability in Europe. It further offers perspectives from and case studies on different countries, such as Ukraine, France, Germany, the United Kingdom, the USA, Turkey, Poland, and Romania. This book is a must-read for scholars for international relations, as well as policy-makers interested in a better understanding of the changing international security architecture, Russia's strategy, arms control, nonproliferation, and the future of nuclear deterrence.

Critical Systems Thinking and the Management of Complexity Michael C. Jackson, 2019-03-15

From the winner of the INCOSE Pioneer Award 2022 The world has become increasingly networked and unpredictable. Decision makers at all levels are required to manage the consequences of complexity every day. They must deal with problems that arise unexpectedly, generate uncertainty, are characterised by interconnectivity, and spread across traditional boundaries. Simple solutions to complex problems are usually inadequate and risk exacerbating the original issues. Leaders of international bodies such as the UN, OECD, UNESCO and WHO – and of major business, public

sector, charitable, and professional organizations — have all declared that systems thinking is an essential leadership skill for managing the complexity of the economic, social and environmental issues that confront decision makers. Systems thinking must be implemented more generally, and on a wider scale, to address these issues. An evaluation of different systems methodologies suggests that they concentrate on different aspects of complexity. To be in the best position to deal with complexity, decision makers must understand the strengths and weaknesses of the various approaches and learn how to employ them in combination. This is called critical systems thinking. Making use of over 25 case studies, the book offers an account of the development of systems thinking and of major efforts to apply the approach in real-world interventions. Further, it encourages the widespread use of critical systems practice as a means of ensuring responsible leadership in a complex world. The INCOSE Pioneer Award is presented to someone who, by their achievements in the engineering of systems, has contributed uniquely to major products or outcomes enhancing society or meeting its needs. The criteria may apply to a single outstanding outcome or a lifetime of significant achievements in effecting

successful systems. Comments on a previous version of the book: Russ Ackoff: ‘the book is the best overview of the field I have seen’ JP van Gigch: ‘Jackson does a masterful job. The book is lucid ...well written and eminently readable’ Professional Manager (Journal of the Chartered Management Institute): ‘Provides an excellent guide and introduction to systems thinking for students of management’

The Art of Co-Creation Bryan R. Rill, Matti M. Hämmäläinen, 2018-08-20 This book illustrates how to design and implement co-creation, a powerful form of collective creativity that harnesses the potential of teams and can generate breakthrough insights. Skilled leaders and facilitators can utilize this approach to unleash the creative potential of their organizations. Drawing from years of applied research, the authors bring together insights from the fields of design and organizational development into an evocative and pragmatic “how-to” guidebook. Taking a human-centred rather than process oriented perspective, the book argues that experience design separates true co-creation from other forms of collective efforts and design thinking. Collective moments of creative insight emerge from the

space between, an experience of flow and synchronicity from which new ideas spring forth. How to create and hold this space is the secret to the art of co-creation. Collective breakthroughs require stakeholders to undergo a journey from the world of their existing expertise into spaces of new potential. It requires leaders moving from a position of dominating space to holding the space for others, and developing core capacities such as empathy and awareness so that teams can engage each other co-creatively. This book uncovers the secrets of this journey, enabling process designers to develop more effective programs.

Programming Bjarne Stroustrup, 2014-06-02 An Introduction to Programming by the Inventor of C++ Preparation for Programming in the Real World The book assumes that you aim eventually to write non-trivial programs, whether for work in software development or in some other technical field. Focus on Fundamental Concepts and Techniques The book explains fundamental concepts and techniques in greater depth than traditional introductions. This approach will give you a solid

foundation for writing useful, correct, maintainable, and efficient code. Programming with Today's C++ (C++11 and C++14) The book is an introduction to programming in general, including object-oriented programming and generic programming. It is also a solid introduction to the C++ programming language, one of the most widely used languages for real-world software. The book presents modern C++ programming techniques from the start, introducing the C++ standard library and C++11 and C++14 features to simplify programming tasks. For Beginners—And Anyone Who Wants to Learn Something New The book is primarily designed for people who have never programmed before, and it has been tested with many thousands of first-year university students. It has also been extensively used for self-study. Also, practitioners and advanced students have gained new insight and guidance by seeing how a master approaches the elements of his art. Provides a Broad View The first half of the book covers a wide range of essential concepts, design and programming techniques, language features, and libraries. Those will enable you to write programs involving input, output, computation, and simple graphics. The second half explores more specialized topics (such as text processing,

testing, and the C programming language) and provides abundant reference material. Source code and support supplements are available from the author's website.

Transforming Pastoral Leadership Quentin P. Kinnison, 2016-05-20 For many congregations, change creates discomfort. Pastoral leaders are often expected to be experts who manage and control realities beyond their expertise, experience, and ability. That expectation, a product of modern approaches to leadership, views the pastor as responsible for maintaining the status quo. *Transforming Pastoral Leadership* responds to this context by challenging readers to rediscover key biblical themes around the shepherding metaphor as well as key theological themes steeped in our historical faith narratives. Readers are challenged to consider the origins of our dominant leadership practices and to reconsider how Christ's preeminence as the leader of his church requires us to reconstruct leadership practices that are faithful to his preeminence. To assist congregations, *Transforming Pastoral Leadership* suggests two processes that might help congregations discern God's missional promptings as they move forward into God's future and experience conflict as opportunities for transformation.

Liberalization in Aviation Hartmut Wolf,Peter Forsyth,David Gillen,Kai Hüschelrath,Hans-Martin Niemeier,2016-05-06 The last few decades have witnessed substantial liberalization trends in various industries and countries. Starting with the deregulation of the US airline industry in 1978, regulatory restructuring took place in further network industries such as telecommunications, electricity or railways in various countries around the world. Although most of the liberalization movements were initially triggered by the worrying performances of the respective regulatory frameworks, increases in competition and corresponding improvements in allocative and productive efficiency were typically associated with the respective liberalization efforts. From an academic perspective, the transition from regulated industries to liberalized industries has attracted a substantial amount of research reflected in

many books and research articles which can be distilled to three main questions: (1) What are the forces that have given rise to regulatory reform? (2) What is the structure of the regulatory change which has occurred to date and is likely to occur in the immediate future? (3) What have been the effects on industry efficiency, prices and profits of the reforms which have occurred to date?

Liberalization in Aviation brings together renowned academics and practitioners from around the world to address all three questions and draw policy conclusions. The book is divided into five sections, in turn dealing with aspects of competition in various liberalized markets, the emergence and growth of low-cost carriers, horizontal mergers and alliances, infrastructures, and concluding with economic assessments of liberalization steps so far and proposed steps in the future.

Searching Merrelyn Emery, 1999 Searching explains how to make the fundamental cultural change required for a desirable sustainable future. It describes the 'two-stage model' of open-systems social science in action and covers two major methods: the Search Conference for strategic planning and community development; and the Participative Design Workshop for the genotypical design and

redesign of organizational structures. The result of nearly 50 years of integrated conceptual and practical development, Searching shows that by replacing 200 years of mechanistic assumptions with concepts and principles which accurately capture human and social realities, these methods generate intrinsic motivation and release human potentials for change. Starting with the building blocks of this internally consistent theoretical framework, Part I explains the interrelations and shows how the power of the methods for achieving this cultural change is generated. Part II of the book describes the methods and illustrates their flexibility by discussing some of their most common variations.
