C-O-S-T Craig Theisen,2022-03-04 Why do companies exert high effort to reduce the costs of products that are production? Because they can! Because unnecessary product costs were not removed during product development. C-O-S-T, short for Cost Optimization System and Technique, details how a company's product development teams, their supporting functions, and company leaders can optimize product costs before production starts and thereby maximize lifecycle profits. Since product development teams determine product costs imparted to new products, much of the book details how these teams optimize product costs. The book also includes ways company leaders can create and sustain company-wide engagement in optimizing product costs and keeping the resulting increased profit margins. The reader is entertained while observing a three-day workshop where executives of a fictitious company, Defender Products, Inc. are being taught the C-O-S-T system by its developers. The story flows like a business workshop with slides, dialog, and break-out sessions. The content will benefit all companies that design, develop and manufacture products.

Practical Applications of Agricultural System Models to Optimize the Use of Limited Water Lajpat R. Ahuja,Liwang Ma,Robert J. Lascano,2020-01-22 Completely devoted to applicati on of models to opti mize the use of limited water and nutrients in various climates, this collecti on will inspire confi dence in the capacity of modeling to tackle the biggest threats to secure agriculture. To obtain the most producti on from available water while maintaining natural resources, we need whole system–based quanti tati ve knowledge and tools to help select appropriate crops and manage water and associated inputs on a site-specifi c basis under changing climate. Site-specifi c experimental results are available for limited locati ons, limited periods of ti me, and limited management opti ons. Well-tested process models of cropping systems can extend fi eld research results to long-term weather conditi ons, as well as other climates and soils, allowing us to explore new management opti ons. The case studies in this volume are promising examples of these kinds of soluti ons.

Optimizing Oracle Performance Cary Millsap,Jeff Holt,2003-09-16 Oracle system performance inefficiencies often go undetected for months or even years--even under intense scrutiny--because traditional Oracle performance analysis methods and tools are fundamentally flawed. They're unreliable and inefficient.Oracle DBAs and developers are all too familiar with the outlay of time and resources, blown budgets, missed deadlines, and marginally effective performance fiddling that is commonplace with traditional methods of Oracle performance tuning. In this crucial book, Cary Millsap, former VP of Oracle's System Performance Group, clearly and concisely explains how to use Oracle's response time statistics to diagnose and repair performance problems. Cary also shows how queueing theory can be applied to response time statistics to predict the impact of upgrades and other system changes.Optimizing Oracle Performance eliminates the time-consuming, trial-and-error guesswork inherent in most conventional approaches to tuning. You can determine exactly where a system's performance problem is, and with equal importance, where it is not, in just a few minutes--even if the problem is several years old.Optimizing Oracle Performance cuts a path through the complexity of current tuning methods, and streamlines an approach that focuses on optimization techniques that any DBA can use quickly and successfully to make noticeable--even dramatic--improvements.For example, the one thing database users care most about is response time. Naturally, DBAs focus much of their time and effort towards improving response time. But it is entirely too easy to spend hundreds of hours to improve important system metrics such as hit ratios, average latencies, and wait times, only to find users are unable to perceive the difference. And an expensive hardware upgrade may not help either.It doesn't have to be that way. Technological advances have added impact, efficiency, measurability, predictive capacity, reliability, speed, and practicality to the science of Oracle performance optimization. Optimizing Oracle Performance shows you how to slash the frustration and expense associated with unraveling the true root cause of any type of performance problem, and reliably predict future performance.The price of this essential book will be paid back in hours saved the first time its methods are used.

Optimization and Dynamical Systems Uwe Helmke,John B. Moore,2012-12-06 This work is aimed at mathematics and engineering graduate students and researchers in the areas of optimization, dynamical systems, control sys tems, signal processing, and linear algebra. The motivation for the results developed here arises from advanced engineering applications and the emer gence of highly parallel computing machines for tackling such applications. The problems solved are those of linear algebra and linear systems the ory, and include such topics as diagonalizing a symmetric matrix, singular value decomposition, balanced realizations, linear programming, sensitivity minimization, and eigenvalue assignment by feedback control. The tools are those, not only of linear algebra and systems theory, but also of differential geometry. The problems are solved via dynamical sys tems implementation, either in continuous time or discrete time , which is ideally suited to distributed parallel processing. The problems tackled are indirectly or directly concerned with dynamical systems themselves, so there is feedback in that dynamical systems are used to understand and optimize dynamical systems. One key to the new research results has been the recent discovery of rather deep existence and uniqueness results for the solution of certain matrix least squares optimization problems in geomet ric invariant theory. These problems, as well as many other optimization problems arising in linear algebra and systems theory, do not always admit solutions which can be found by algebraic methods.

Analog Circuits and Systems Optimization based on Evolutionary Computation Techniques Manuel Barros,Jorge Guilherme,Nuno Horta,2010-04-22 The microelectronics market, with special emphasis to the production of complex mixed-signal systems-on-chip (SoC), is driven by three main dynamics, time-- market, productivity and managing complexity. Pushed by the progress in na- meter technology, the design teams are facing a curve of complexity that grows exponentially, thereby slowing down the productivity design rate. Analog design automation tools are not developing at the same pace of technology, once custom design, characterized by decisions taken at each step of the analog design flow, - lies most of the time on designer knowledge and expertise. Actually, the use of - sign management platforms, like the Cadences Virtuoso platform, with a set of - tegrated CAD tools and database facilities to deal with the design transformations from the system level to the physical implementation, can significantly speed-up the design process and enhance the productivity of analog/mixed-signal integrated circuit (IC) design teams. These design management platforms are a valuable help in analog IC design but they are still far behind the development stage of design automation tools already available for digital design. Therefore, the development of new CAD tools and design methodologies for analog and mixed-signal ICs is ess- tial to increase the designer's productivity and reduce design productivitygap. The work presented in this book describes a new design automation approach to the problem of sizing analog ICs.

Optimization of Photovoltaic Power Systems Djamila Rekioua,Ernest Matagne,2012-01-03 Photovoltaic generation is one of the cleanest forms of energy conversion available. One of the

advantages offered by solar energy is its potential to provide sustainable electricity in areas not served by the conventional power grid. Optimisation of Photovoltaic Power Systems details explicit modelling, control and optimisation of the most popular stand-alone applications such as pumping, power supply, and desalination. Each section is concluded by an example using the MATLAB® and Simulink® packages to help the reader understand and evaluate the performance of different photovoltaic systems. Optimisation of Photovoltaic Power Systems provides engineers, graduate and postgraduate students with the means to understand, assess and develop their own photovoltaic systems. As such, it is an essential tool for all those wishing to specialise in stand-alone photovoltaic systems. Optimisation of Photovoltaic Power Systems aims to enable all researchers in the field of electrical engineering to thoroughly understand the concepts of photovoltaic systems; find solutions to their problems; and choose the appropriate mathematical model for optimising photovoltaic energy.

Optimize Now (or Else!) David M. Fisher,2003-12 Companies are often their own worst enemies. We work in disconnected functional and geographic silos, making it impossible to achieve end-to-end effectiveness. We struggle to make optimal decisions due to our overwhelming lack of quality information. In Optimize Now (or else!), David Fisher identifies the source of many of these problems and attacks them at their core. He explores the critical importance of processes and information that represent both the root of our problems and our greatest opportunity for dramatic improvement. He introduces new leadership in the Chief Process and Information Officer and the Process and Information Department, and specifies how to position these roles for enterprise-wide success. He further introduces the Enterprise Optimization Framework, an innovative, metric-driven decision-making framework, to ensure decisions are no longer based on gut feel but rather on quantitative expected outcomes. Finally, he explores the do's and don'ts of outsourcing and information technology with specific guidance on how these resources can be utilized to advance end-to-end optimization. It's time to put an end to our own misery. It's time to follow the path toward Enterprise Optimization, and avoid the downward spiral to Enterprise Extinction. Survival is at stake. We must Optimize Now (or else!).
