Salmos from South Bethlehem Pamela Smith, 2012-08-07 This collection of 20 poems is spoken in the voice of a character named Rosa Celestina Morales, a 17 year old Puerto Rican girl living in South Bethlehem, Pennsylvania, in the early 1970s. Rosa's hopes and dreams, frustrations and torments are expressed in a mix of street talk, self-mumbling, and phrases from familiar prayers in Spanish, imported from the Spanish Mass and the first 20 psalms. The content is drawn from the author's own experiences during the year she lived in Rosa's neighborhood as well as from stories she heard and people she met around the neighborhood. Several of these poems have appeared previously in the New York Quarterly, Cimarron Review, and Woman Song III. This is the first time the set of 20 have been collected in book form. The work is framed as a poetic memoir. A prose introduction by the author and an afterword in Rosa's voice round out the series of poems and project what Rosa's life might have turned to some forty years later.

Fast and Scalable Cloud Data Management Felix Gessert, Wolfram Wingerath, Norbert Ritter, 2020-05-15 The unprecedented scale at which data is both produced and consumed today has generated a large demand for scalable data management solutions facilitating fast access from all over the world. As one consequence, a plethora of non-

relational, distributed NoSQL database systems have risen in recent years and today's data management system landscape has thus become somewhat hard to overlook. As another consequence, complex polyglot designs and elaborate schemes for data distribution and delivery have become the norm for building applications that connect users and organizations across the globe – but choosing the right combination of systems for a given use case has become increasingly difficult as well. To help practitioners stay on top of that challenge, this book presents a comprehensive overview and classification of the current system landscape in cloud data management as well as a survey of the state-of-the-art approaches for efficient data distribution and delivery to end-user devices. The topics covered thus range from NoSQL storage systems and polyglot architectures (backend) over distributed transactions and Web caching (network) to data access and rendering performance in the client (end-user). By distinguishing popular data management systems by data model, consistency guarantees, and other dimensions of interest, this book provides an abstract framework for reasoning about the overall design space and the individual positions claimed by each of the systems therein. Building on this classification, this book further presents an application-driven decision guidance tool that breaks the process of choosing a set of viable system candidates for a given application scenario down into a straightforward decision tree.

Collision Low Crossers Nicholas Dawidoff, 2013-11-19 An unrivaled portrait of day-to-day life in the NFL: Riveting . . . an instant classic (New York Times Book Review). By spending a year with the New York Jets, Nicholas Dawidoff entered a mysterious and private world with its own rituals and language. Equal parts Paper

Lion, Moneyball, Friday Night Lights, and The Office, this absorbing, funny, and vivid narrative gets to the heart of a massive and stressful collective endeavor. Here is football in many faces: the polarizing, brilliant, and hilarious head coach; the general manager, whose job is to support (and suppress) the irrepressible coach; the defensive coaches and their in-house rivals, the offensive coaches; and of course the players. Wise safeties, brooding linebackers, high-strung cornerbacks, enthusiastic rookies, and a well-read nose tackle: they make up a strange and complex family. Dawidoff makes an emblematic NFL season come alive for fans and nonfans alike in a book about football that will forever change the way people watch and think about the sport.

Power Electronics for the Microprocessor Age Takashi Kenjō,1990

This volume explores the various aspects and applications of microprocessor-controlled electronic drives, a growing new technology which has recently impacted the area of power electronics. It emphasizes the manipulation and use of low and medium power motors which are useful in the motion control of robots, computer peripherals, and other appliances. *Power Electronics for the Microprocessor Age* begins with a general overview of the relationship between computers, power circuitry, and motors. It then provides full chapter guidance on a.c.-to-d.c. converters, servo-amplifiers, stepping-motor drives, and inverters. The author also sets forth a unique theory on the pulse-width modulation technique for inverters, and describes a useful method for position control using a d.c. motor. Complete in one volume, the text covers theory, practical circuits and software, and is illustrated with over 290 machine cutaways views and circuit diagrams.
