The Definitive Guide to the ARM Cortex-M0 Joseph Yiu,2011-04-04 The Definitive Guide to the ARM Cortex-M0 is a guide for users of ARM Cortex-M0 microcontrollers. It presents many examples to make it easy for novice embedded-software developers to use the full 32-bit ARM Cortex-M0 processor. It provides an overview of ARM and ARM processors and discusses the benefits of ARM Cortex-M0 over 8-bit or 16-bit devices in terms of energy efficiency, code density, and ease of use, as well as their features and applications. The book describes the architecture of the Cortex-M0 processor and the programmers model, as well as Cortex-M0 programming and instruction set and how these instructions are used to carry out various operations. Furthermore, it considers how the memory architecture of the Cortex-M0 processor affects software development; Nested Vectored Interrupt Controller (NVIC) and the features it supports, including flexible interrupt management, nested interrupt support, vectored exception entry, and interrupt masking; and Cortex-M0 features that target the embedded operating system. It also explains how to develop simple applications on the Cortex-M0, how to program the Cortex-M0 microcontrollers in assembly and mixed-assembly languages, and how the low-power features of the Cortex-M0 processor are used in programming. Finally, it describes a number of ARM Cortex-M0 products, such as microcontrollers, development boards, starter kits, and development suites. This book will be useful to both new and advanced users of ARM Cortex devices, from students and hobbyists to researchers, professional embedded- software developers, electronic enthusiasts, and even semiconductor product designers. The first and definitive book on the new ARM Cortex-M0 architecture targeting the large 8-bit and 16-bit microcontroller market Explains the Cortex-M0 architecture and how to program it using practical examples Written by an engineer at ARM who was heavily involved in its development

Harnessing Technology for Every Child Matters and Personalised Learning John Galloway,2008-11-27 This book takes into account three core policies: 'Every Child Matters', 'Personalised Learning', and 'Harnessing Technology', combined they are at the heart of changes to children and young peoples' experiences of school. Harnessing Technology considers these policies and their interlinked relationship. It outlines the ways in which technology allows us to assess, track and monitor pupil progress and use this information to better support both their learning and their broader needs, making it an essential resource for training and practicing teachers, school leaders, and all those involved in educational transformation. To achieve the five outcomes of the 'Every Child Matters' agenda requires an approach that is pupil centred, with developments in new technologies making it possible to not only understand each individual more precisely, but also for them to learn in more flexible and personalised ways. Through innovations such as web based information sharing, learning platforms and e-portfolios, schools will be able to offer content appropriate to pupil's personal goals, breaching conventional orthodoxies of time and place. How far these policies will transform schools and services for children and young people remains to be seen. Consideration is given within the book to the barriers to their success, the issues that impinge upon them, and questions asked about their capacity to bring about long-term, systemic, change.

Who's Talking? The Effect of Personalised Voice on Speech Generating Devices for the Child with Autism Susan Ni Chuileann,2016-06-22 A significant number of individuals with Autism Spectrum Disorder (ASD) never gain functional speech across their lifespan. For many of these individuals, Speech Generating Devices (SGDs) have provided them with opportunities to verbalise their thoughts and needs to others. Recently, technology has developed to make these devices sound more like the person using them. The idea is that a more 'natural' voice, rich in accent, gender and tone, will create a greater sense of ownership for communication in the child, thus enhancing the frequency and richness of the child's social interactions. This book investigates the ability of the child with ASD to recognise voice. It takes the reader on a journey, vividly questioning the assumption that voice recognition is a simple task for the typically developing child, the child with developmental delays and the child with autism. Each chapter unfolds into the next with a sense of purpose, curiosity and determination, in order to assess the potential of natural voice in SGDs for the child with ASD.

Field Programmable Logic and Application Jürgen Becker, Marco Platzner, Serge Vernalde, 2004-08-11 This book contains the papers presented at the 14th International Conference on Field Programmable Logic and Applications (FPL) held during August 30th- September 1st 2004. The conference was hosted by the Interuniversity Micro-Electronics Center (IMEC) in Leuven, Belgium. The FPL series of conferences was founded in 1991 at Oxford University (UK), and has been held annually since: in Oxford (3 times), Vienna, Prague, Darmstadt, London, Tallinn, Glasgow, Villach, Belfast, Montpellier and Lisbon. It is the largest and oldest conference in reconfigurable computing and brings together academic researchers, industry experts, users and newcomers in an informal, welcoming atmosphere that encourages productive exchange of ideas and knowledge between the delegates. The fast and exciting advances in field programmable logic are increasing steadily with more and more application potential and need. New ground has been broken in architectures, design techniques, (partial) run-time reconfiguration and applications of field programmable devices in several different areas. Many of these recent innovations are reported in this volume. The size of the FPL conferences has grown significantly over the years. FPL in 2003 saw 216 papers submitted. The interest and support for FPL in the programmable logic community continued this year with 285 scientific papers submitted, demonstrating a 32% increase when compared to the year before. The technical program was assembled from 78 selected regular papers, 45 additional short papers and 29 posters, resulting in this volume of proceedings. The program also included three invited plenary keynote presentations from Xilinx, Gilder Technology Report and Altera, and three embedded tutorials from Xilinx, the Universit" at Karlsruhe (TH) and the University of Oslo.

MediaSync Mario Montagud, Pablo Cesar, Fernando Boronat, Jack Jansen, 2018-03-26 This book provides an approachable overview of the most recent advances in the fascinating field of media synchronization (mediasync), gathering contributions from the most representative and influential experts. Understanding the challenges of this field in the current multi-sensory, multi-device, and multi-protocol world is not an easy task. The book revisits the foundations of mediasync, including theoretical frameworks and models, highlights ongoing research efforts, like hybrid broadband broadcast (HBB) delivery and users' perception modeling (i.e., Quality of Experience or QoE), and paves the way for the future (e.g., towards the deployment of multi-sensory and ultra-realistic experiences). Although many advances around mediasync have been devised and deployed, this area of research is getting renewed attention to overcome remaining challenges in the next-generation (heterogeneous and ubiquitous) media ecosystem. Given the significant advances in this research area, its current relevance and the multiple disciplines it involves, the availability of a reference book on mediasync becomes necessary. This book fills the gap in this context. In particular, it addresses key aspects and reviews the most relevant contributions within the mediasync research space, from different perspectives. Mediasync: Handbook on Multimedia Synchronization is the perfect companion for scholars and practitioners that want to acquire strong knowledge about this research area, and also approach the challenges behind ensuring the best mediated experiences, by providing the adequate synchronization between the media elements that constitute these experiences.

Pipelined Multiprocessor System-on-Chip for Multimedia Haris Javaid, Sri Parameswaran, 2013-11-26 This book describes analytical models and estimation methods to enhance performance estimation of pipelined multiprocessor systems-on-chip (MPSoCs). A framework is introduced for both design-time and run-time optimizations. For design space exploration, several algorithms are presented to minimize the area footprint of a pipelined MPSoC under a latency or a throughput constraint. A novel adaptive pipelined MPSoC architecture is described, where idle processors are transitioned into low-power states at run-time to reduce energy consumption. Multi-mode pipelined MPSoCs are introduced, where multiple pipelined MPSoCs optimized separately are merged into a single pipelined MPSoC, enabling further reduction of the area footprint by sharing the processors and communication buffers. Readers will benefit from the authors' combined use of analytical models, estimation methods and exploration algorithms and will be enabled to explore billions of design points in a few minutes.
