The Image of America in Caricature & Cartoon Ronnie C. Tyler,Amon Carter Museum of Western Art,1976 The Image of America traces the development of American history and culture through more than two centuries of caricature and cartoon. Through the acerbic eyes of both American and foreign artists it portrays our history in dramatic tone-building images. With the pathos, humor and the prejudices of his time each artist caricatures the personalities and events that form our culture. Paul Revere, William Charles, and James Gillray satirized the vents of the Revolution and the War of 1812. David Claypool Johnston earned the title of the American Cruikshank with his devastating caricatures of King Andrew Jackson and his administration, and Southern cartoonists vented their wrath on Abraham Lincoln as the Civil War raged. Artists readily identified or created symbols for each era as cartoons became a widely-distributed art of the people. America was first symbolized as a naïve Indian or the virginal Columbia. The American Eagle was employed to represent the country after it was adopted as the official emblem on the Great Seal. The most famous symbol of the United States, however, is Uncle Sam, best personified by James Montgomery Flagg during World War I. In each decade cartoonists demonstrate their ability to capture the essence of an age in a caricature--Theodore Roosevelt, Franklin D. Roosevelt, Louis Satchmo Armstrong, et al. The Image of America demonstrates the firm relationship between the events of history and contemporary art forms.--Jacket flap.

Understanding Caricature Greg Houston,2021-04-27 A truly comprehensive and laser-focused examination of a really wonderful, expressive art form. Understanding Caricature offers artists, aspiring artists, students, journalists, bloggers, etc. a lively guide to an old and respected art form. A great caricature is one that not only captures the subject's look and personality but amplifies them significantly. They are almost always funny and very often (but not always) mean spirited. Eyes, ears, nose, mouth, hairline, cheeks, eyebrows, teeth, chin: There's no facial feature (or any other body part, for that matter) that can escape the sardonic scrutiny of caricaturist and illustrator Greg Houston. But though he cleverly twists, exaggerates, and distorts each subject's image, he always makes sure the person remains recognizable—an absolute must for successful caricature. Whether on assignment or simply drawing for his own perverse pleasure, Houston loves skewering the high and mighty—movie stars, moguls, politicians, and assorted other VIPs—especially when they misbehave. Caricature, says Houston, is a very sharp weapon for the powerless to use against the powerful, and he can teach you to wield it, too. After defining caricature, differentiating it from other forms of portraiture, and delving into its centuries-long history, Houston gets down to the nitty gritty of how to do it. He focuses sequentially on the face, the hair, the body, and what he calls "accoutrements"—distinctive items of clothing that help viewers immediately identify celebrities. You yourself will learn to poke artistic fun at the famous through a series of demonstrations that let you follow Houston as he constructs caricatures of Jake Gyllenhaal, Masie Williams, Dwayne Johnson, Rainn Wilson, and other notable victims of his wicked pen. But Houston doesn't focus solely on his own approach. A whole chapter of Understanding Caricature is devoted to other contemporary caricaturists and the signature mediums they work in, ranging from traditional oils and watercolors, to digital drawing and painting, to sculpture and even puppet-making. And the book's final chapter displays the work of students who've studied with Houston at his Baltimore academy. Brilliant in their own right, these pieces also demonstrate how any artist, with Houston's guidance, can become a skilled practitioner of the caricaturist's art.

Computer Vision -- ACCV 2014 Daniel Cremers,Ian Reid,Hideo Saito,Ming-Hsuan Yang,2015-04-15 The five-volume set LNCS 9003--9007 constitutes the thoroughly refereed post-conference proceedings of the 12th Asian Conference on Computer Vision, ACCV 2014, held in Singapore, Singapore, in November 2014. The total of 227 contributions presented in these volumes was carefully reviewed and selected from 814 submissions. The papers are organized in topical sections on recognition; 3D vision; low-level vision and features; segmentation; face and gesture, tracking; stereo, physics, video and events; and poster sessions 1-3.

The Languages of Humor Arie Sover,2018-09-20 Why are things funny? How has humor changed over the centuries? How can humor be a political force? Featuring expert authors from across the globe, The Languages of Humor discusses three main types of humour: verbal, visual, and physical. Despite the differences between them, all have a common purpose, showing us in different ways the reality that we live in, and how we can reflect on that reality. To this end, the book shows how humor has been used to address such topics as the Holocaust and the Soviet Union, and why it has been controversial in cases including Charlie Hebdo. The Languages of Humor explores a subject that is of interest in a wide range of intellectual disciplines including sociology, psychology, communication, philosophy, history, social sciences, linguistics, computer science, literature, theatre, education, and cultural studies. This volume features contributions from world-leading academics, some of who have professional backgrounds in this field. This unique research-led book, which includes over 20 illustrations, offers a top-down analysis of humor studies.

Generative Adversarial Networks for Image-to-Image Translation Arun Solanki,Anand Nayyar,Mohd Naved,2021-06-22 Generative Adversarial Networks (GAN) have started a revolution in Deep Learning, and today GAN is one of the most researched topics in Artificial Intelligence. Generative Adversarial Networks for Image-to-Image Translation provides a comprehensive overview of the GAN (Generative Adversarial Network) concept starting from the original GAN network to various GAN-based systems such as Deep Convolutional GANs (DCGANs), Conditional GANs (cGANs), StackGAN, Wasserstein GANs (WGAN), cyclical GANs, and many more. The book also provides readers with detailed real-world applications and common projects built using the GAN system with respective Python code. A typical GAN system consists of two neural networks, i.e., generator and discriminator. Both of these networks contest with each other, similar to game theory. The generator is responsible for generating quality images that should resemble ground truth, and the discriminator is accountable for identifying whether the generated image is a real image or a fake image generated by the generator. Being one of the unsupervised learning-based architectures, GAN is a preferred method in cases where labeled data is not available. GAN can generate high-quality images, images of human faces developed from several sketches, convert images from one domain to another, enhance images, combine an image with the style of another image, change the appearance of a human face image to show the effects in the progression of aging, generate images from text, and many more applications. GAN is helpful in generating output very close to the output generated by humans in a fraction of second, and it can efficiently produce high-quality

music, speech, and images. Introduces the concept of Generative Adversarial Networks (GAN), including the basics of Generative Modelling, Deep Learning, Autoencoders, and advanced topics in GAN Demonstrates GANs for a wide variety of applications, including image generation, Big Data and data analytics, cloud computing, digital transformation, E-Commerce, and Artistic Neural Networks Includes a wide variety of biomedical and scientific applications, including unsupervised learning, natural language processing, pattern recognition, image and video processing, and disease diagnosis Provides a robust set of methods that will help readers to appropriately and judiciously use the suitable GANs for their applications

The 34 revised full papers and 51 short papers presented were carefully reviewed and selected from 306 submissions. The papers are organized in topical sections on computing methodologies; hardware; networks; security and privacy.

Photography and Germany Andrés Mario Zervigón,2017-05-15 The idea of photography in Germany evokes everything from the pioneering modernist pictures of the Weimar era to the colossal digital prints that define art photography today. But it also recalls horrifying documents of wartime atrocities and the relentless surveillance of East German citizens. Photography and Germany broadens these perceptions by examining the medium's multi-faceted relationship with Germany's turbulent cultural, political, and social history while rethinking the notion of German photography with fresh insights on its historical context. Andrés Mario Zervigón covers this history from the region's pre-photographic experiments with light-sensitive chemicals to today's tension between analog and digital technologies. Rather than simply providing a survey of German photography, however, he focuses on how the medium, as a product of the modern age, has intervened in a fraught project of national imagining, often to productive ends but sometimes to catastrophic results. Richly illustrated with numerous previously unpublished images, Photography and Germany is the first single-authored history of photography in Germany ever published, one that deepens our broader understanding of how photography cultivates notions of a nation and its inhabitants.

Photography and Its Publics Melissa Miles,Edward Welch,2020-08-05 Photography is a ubiquitous part of the public sphere. Yet we rarely stop to think about the important role that photography plays in helping to define what and who constitute the public. Photography and Its Publics brings together leading experts and emerging thinkers to consider the special role of photography in shaping how the public is addressed, seen and represented.This book responds to a growing body of recent scholarship and flourishing interest in photography's connections to the law, society, culture, politics, social change, the media and visual ethics.Photography and Its Publics presents the public sphere as a vibrant setting where these realms are produced, contested and entwined. Public spheres involve yet exceed the limits of families, interest groups, identities and communities. They are dynamic realms of visibility, discussion, reflection and possible conflict among strangers of different race, age, gender, social and economic status. Through studies of photography in South America, North America, Europe and Australasia, the contributors consider how photography has changed the way we understand and locate the public sphere. As they address key themes including the referential and imaginative qualities of photography, the transnational circulation of photographs, online publics, social change, violence, conflict and the ethics of spectatorship, the authors provide new insight into photography's vital role in defining public life.

Modern Machine Learning Techniques and Their Applications in Cartoon Animation Research Jun Yu,Dacheng Tao,2013-03-27 The integration of machine learning techniques and cartoon animation research is fast becoming a hot topic. This book helps readers learn the latest machine learning techniques, including patch alignment framework; spectral clustering, graph cuts, and convex relaxation; ensemble manifold learning; multiple kernel learning; multiview subspace learning; and multiview distance metric learning. It then presents the applications of these modern machine learning techniques in cartoon animation research. With these techniques, users can efficiently utilize the cartoon materials to generate animations in areas such as virtual reality, video games, animation films, and sport simulations
