*Representation Theory and Beyond* Jan Šťovíček, Jan Trlifaj, 2020-11-13 This volume contains the proceedings of the Workshop and 18th International Conference on Representations of Algebras (ICRA 2018) held from August 8-17, 2018, in Prague, Czech Republic. It presents several themes of contemporary representation theory together with some new tools, such as stable  $\infty$ -categories, stable derivators, and contramodules. In the first part, expanded lecture notes of four courses delivered at the workshop are presented, covering the representation theory of finite sets with correspondences, geometric theory of quiver Grassmannians, recent applications of contramodules to tilting theory, as well as symmetries in the representation theory over an abstract stable homotopy theory. The second part consists of six more-advanced papers based on plenary talks of the conference, presenting selected topics from contemporary representation theory: recollements and purity, maximal green sequences, cohomological Hall algebras, Hochschild cohomology of associative algebras, cohomology of local selfinjective algebras, and the higher Auslander-Reiten theory studied via homotopy theory.

**Winning Images with Any Underwater Camera** Paul Colley, 2014-05-29 'This book will arm and inspire you to transform your underwater photographs, whatever camera you use': Alex Mustard (from the Foreword) The best underwater images don't just capture the subject well, they also capture mood, emotion and atmosphere. Unlike most other underwater photography books, Winning Images with Any Underwater Camera focuses on composition and techniques rather than the all-consuming camera technology that people tend to chase first. This makes it a supremely cost-effective tool for improving images; and there is no discrimination between users of different camera systems — this truly is a book for all. International award winner and instructor Paul Colley reveals the short cuts and shows the vital bits of artistic theory as it applies to underwater photography, grappling with composition in much greater depth than in other books. He also includes easy-to-remember reference models for underwater composition: pre-planned concepts for twelve typical underwater scenes, with the principal considerations boiled down to those essentials that will help you achieve great results, time and again.
