**5G Radio Access Network Architecture** Sasha Sirotkin,2020-11-25 Discover how the NG-RAN architecture is, and isn't, ready for the challenges introduced by 5G 5G Radio Access Network Architecture: The Dark Side of 5G explores foundational and advanced topics in Radio Access Network (RAN) architecture and why a re-thinking of that architecture is necessary to support new 5G requirements. The distinguished engineer and editor Sasha Sirotkin has included numerous works written by industry insiders with state of the art research at their disposal. The book explains the relevant standards and technologies from an academic perspective, but also explains why particular standards decisions were made and how a variety of NG-RAN architecture options could be deployed in real-life networks. All major standards and technologies associated with the NG-RAN architecture are discussed in this book, including 3GPP, O-RAN, Small Cell Forum, IEEE, and IETF. Readers will learn about how a re-design of the RAN architecture would ensure that 5G networks can deliver their promised throughput and low latency KPIs consistently and sustainably. The book is structured as follows: An overview of the market drivers of the NG-RAN architecture, like spectrum models, 5G-relevant regulatory considerations, and 5G radio interface technical requirements An overview of the 5G System, from the core network, to the RAN, to the radio interface protocols and physical layer, with emphasis on how these are different compared to 4G Release-15 RAN architectures defined in 3GPP, O-RAN, and Small Cell Forum RAN architecture evolution in Release-16 and Release-17 Enabling technologies, like virtualization, open source technologies, multi-access edge (MEC) computing, and operations, administration, and management (OAM) NG-RAN deployment considerations, objectives, and challenges, like costs, spectrum and radio propagation considerations, and coverage Perfect for network designers and operators who require a solid understanding of the NG-RAN architecture, 5G Radio Access Network Architecture also belongs on the bookshelves of network engineers who aim to increase their understanding of the standards and technologies relevant to the NG-RAN architecture.

**Interdisciplinary Essays on Environment and Culture** Luigi Manca,Jean-Marie Kauth,2015-12-24 This collection asks and answers a basic question: what is the relationship between humanitarian and environmental issues, and how are these portrayed in the media? The essays examine this question from a variety of academic viewpoints and argue that although the interests of planet and people are often seen in opposition, they are, in reality, symbiotic.

**Digital Broadcasting** Jo Pierson,Joke Bauwens,2015-04-23 Digital Broadcasting presents an introduction to how the classic notion of 'broadcasting' has evolved and is being reinterpreted in an age of digitization and convergence. The book argues that 'digital broadcasting' is not a contradiction in terms, but-on the contrary-both terms presuppose and need each other. Drawing upon an interdisciplinary and international field of research and theory, it looks at current developments in television and radio broadcasting on the level of regulation and policy, industries and economics, production and content, and audience and consumption practices.

**Wireless Ad Hoc Networking** Shih-Lin Wu,Yu-Chee Tseng,2007-03-28 The rapid progress of mobile, wireless communication and embedded micro-sensing MEMS technologies has brought about the rise of pervasive computing. Wireless local-area networks (WLANs) and wireless personal-area networks (WPANs) are now common tools for many people, and it is predicted that wearable sensor networks will greatly improve everyday life as we know it. By integrating these technologies into a pervasive system, we can access information and use computing resources anytime, anywhere, and with any device. *Wireless Ad Hoc Networking: Personal-Area, Local-Area, and the Sensory-Area Networks* covers these key technologies used in wireless ad hoc networks. The book is divided into three parts, each providing self-contained chapters written by international experts. Topics include networking architectures and protocols, cross-layer architectures, localization and location tracking, time synchronization, QoS and real-time, security and dependability, applications, modeling and performance evaluation, implementation and experience, and much more. The book is novel in its single source presentation of ad hoc networking and related key technologies and applications over the platforms of personal area, sensory area, and local area networks. It is a valuable resource for those who work in or are interested in learning about the pervasive computing environment.

**Geo-Spatial Knowledge and Intelligence** Hanning Yuan,Jing Geng,Fuling Bian,2017-03-02 The two volume proceedings of CCIS 698 and 699 constitutes revised selected papers from the 4th International Conference on Geo-Informatics in Resource Management and Sustainable Ecosystem, GRMSE 2016, held in Hong Kong, China, in November 2016. The total of 118 papers presented in these proceedings were carefully reviewed and selected from 311 submissions. The contributions were organized in topical sections named: smart city in resource management and sustainable ecosystem; spatial data acquisition through RS and GIS in resource management and sustainable ecosystem; ecological and environmental data processing and management; advanced geospatial model and analysis for understanding ecological and environmental processes; applications of geo-informatics in resource management and sustainable ecosystem.

*Behavioral Finance: The Coming Of Age* Venezia Itzhak,2019-04-18 The area of behavioral finance, though relatively young, has matured and spread beyond its initial objectives: to demonstrate the fallibility of the efficient market hypothesis, to shake the belief in the ubiquity of rational decision making, and to convince the finance world of the importance of psychological biases in decision making. The success of the field in meeting its goals, however, has called into question its continued relevance. Behavioral finance is thus currently at a crossroads, and researchers need to decide which way they should turn for the area to continue to thrive and to meaningfully contribute to financial knowledge. This collection of papers deals with rarely-explored topics to point at new directions that behavioral finance should explore to maintain its viability, along with contributions to traditional topics. Some of these topics include innovations, the psychology of policy-makers, biases of peer-to-peer market participants, the behavior and motivation behind corporate social responsibility, and the design of exchanges. Additionally, well-known topics such as the disposition effect, slow and fast decisions and the availability heuristic are revisited, and surprising new findings are presented. By opening the field to novel avenues of discussion, this book addresses the future of behavioral finance and its transition into a new era.
