Radio Monitoring Anatoly M. Rembovsky, Alexander V. Ashikhmin, Vladimir A. Kozmin, Sergey M. Smolskiy, 2018-04-25 This book discusses the architecture of modern automated systems for spectrum monitoring including automation components: technical means for spectrum monitoring, special software and engineering infrastructure. The problems of automated system development for search and localization of unauthorized radio emission sources in open localities, mathematical methods and algorithms for modulation of parameter measurements for wireless communication as well as issues of identification and localization of radio emission sources are considered. Constructive solutions and modern technical means for radio monitoring and their application are given. Numerous examples are described for the implementation of automated systems, digital radio receivers and radio direction-finders, analyzers of parameters for GSM, CDMA, LTE, DVB-T/T2, Wi-Fi, DMR, P25, TETRA and DECT signals. Practical implementations of the described methods are presented in applied software packages and in radio monitoring equipment.

Digital Journalism, Drones, and Automation Cate Dowd, 2020-01-27 The lure of big data and analytics has produced new partnerships between news media and social media and consequently a fragmentation of digital journalism. The era is coupled with the rise in fake news and controversial data sharing. However, creative mobile reporting and civilian drones set new standards for journalist during the European asylum seeker crisis. Yet the focus on data and remote cloud servers continues to dominate online news and journalism, alongside new semantic models for data personalization. News tags that define concepts within a news story to assist search, are now monetized abstractions in accelerated data processing that enables automation and feeds advertising. Can journalism compete with this by defining its own concepts with ethical values named and embedded in algorithms? Can machines make sense of the world in the same way as a traditional journalist? In this book, Cate Dowd analyzes the tasks and ethics of journalists and questions how intelligent machines could simulate ethical human behaviors to better understand the dizzy post-human world of online data. Looking to digital journalism and multi-platform news media, from studios and integrated media systems to mobile reporting in the field, Dowd assesses how data and digital technology has impacted on journalism over the past decade. Dowd's research is informed by in-depth participation with investigative journalists, including images drawn and annotated by industry experts to present key journalism concepts, priorities, and values. Chapters explore approaches for the elicitation of vocabulary for journalism and design methods to embed values and ethics into algorithms for the era of automation and big data. *Digital Journalism, Drones, and Automation* provides insights into the lasting values of journalism processes and equips readers interested in entering or understanding online data and news media with much needed context and wisdom.

Fundamentals of Automation and Remote Control S. A. Ginzburg, I. Ya. Lekhtman, V. S. Malov, 2013-10-22

International Series of Monographs in Automation and Automatic Control, Volume 7: Fundamentals of Automation and Remote Control describes the complex systems of automatic control and telecontrol. This text is a translation from the second Russian edition. This book contains descriptive material on the fundamentals of automation and remote control, with attention to electrical components and systems. Part I deals with the basic components of automation and remote control, such as functions and general characteristics, and electromechanical, ferromagnetic, and electronic and radioactive components. The construction of automation systems that use radioactive isotopes is given as an example where the penetrating power of the radioactive radiation can measure the thickness of an object. Part II discusses automation systems and describes the principles of stability analysis that are needed in the dynamics of automatic regulation and control, follower, and measuring systems. A schematic diagram of an automatic speed regulator is analyzed in detail as an example. Part III is a description of the many remote control systems that are used, for example, in signaling systems, in telemetry systems, and in command-link systems. The importance of communication channels to remote control systems is also pointed out. Long-range signaling and telecontrol, which uses selection methods to assign the correct signals, are explained. A diagram of a telecontrol unit with time separation of signals is illustrated, and the protection of the unit from employing

distorted signals is explained. Mechanical engineers, technicians, and students with serious interest in automatic control and telecontrol will find this book valuable.
