The Recent East Thomas Grattan, 2021-03-09 FINALIST FOR THE 2022 LA TIMES ART SEIDENBAUM AWARD FOR FIRST FICTION. LONGLISTED FOR THE PEN/HEMMINGWAY AWARD FOR DEBUT NOVEL. A New York Times Book Review Editors' Choice. A wonderful, immersive debut novel . . . in [Thomas] Grattan's hands, life's joys are magnetic. --Patrick Nathan, The New York Times Book Review An extraordinary family saga following a mother and two teens as they navigate a new life in East Germany Shortly after the fall of the Berlin Wall, Beate Haas, who defected from East Germany as a child, is notified that her parents' abandoned mansion is available for her to reclaim. Newly divorced and eager to escape her bleak life in upstate New York, where she moved as an adult, she arrives with her two teenagers to discover a city that has become an unrecognizable ghost town. The move fractures the siblings' close relationship, as Michael, free to be gay, takes to looting empty houses and partying with wannabe anarchists, while Adela, fascinated with the horrors of the Holocaust, buries herself in books and finds companionship in a previously unknown cousin. Over time, the town itself changes—from dismantled city to refugee haven and neo-Nazi hotbed, and eventually to a desirable seaside resort town. In the midst of that change, two episodes of devastating, fateful violence come to define the family forever. Moving seamlessly through decades and between the thoughts and lives of several unforgettable characters, Thomas Grattan's spellbinding novel is a multigenerational epic that illuminates what it means to leave home, and what it means to return. Masterfully crafted with humor, gorgeous prose, and a powerful understanding of history and heritage, *The Recent East* is the profoundly affecting story of a family upended by displacement and loss, and the extraordinary debut of an empathetic and ambitious storyteller.

The Weeping Time Anne C. Bailey, 2017-10-09 In 1859, at the largest recorded slave auction in American history, over 400 men, women, and children were sold by the Butler Plantation estates. This book is one of the first to analyze the operation of this auction and trace the lives of slaves before, during, and after their sale. Immersing herself in the personal papers of the Butlers, accounts from journalists that witnessed the auction, genealogical records, and oral histories, Anne C. Bailey weaves together a narrative that brings the auction to life. Demonstrating the resilience of African American families, she includes interviews from the living descendants of slaves sold on the auction block, showing how the memories of slavery have shaped people's lives today. Using the auction as the focal point, *The Weeping Time* is a compelling and nuanced narrative of one of the most pivotal eras in American history, and how its legacy persists today.

Recent Forgeries Viggo Mortensen, 1998 *Recent Forgeries* documents Viggo's first solo exhibition as a painter. It is an extraordinary look into the mind of an artist whose boundless creative output touches a myriad of media, from photography to painting to poetry to acting. A minute gesture, an accidental encounter, a change of light—Mortensen uses his art to capture the simple moments of his life, to give them meaning, to satisfy his curiosity, and to express his wonder at the suchness of people and things in the passing world. The writings, paintings, collages, and photographs (color as well as black and white) in this book point to the fluidity of meaning in a world of flux. Illustrated within this publication are some of the painting Viggo did for the movie *A Perfect Murder*. *Recent Forgeries* includes a CD with music and spoken-word poetry. Introduction by Dennis Hopper.

Recent Advances in Symbiosis Research: Integrative Approaches M. Pilar Francino, Mónica Medina, 2017-02-02
Traditionally, symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host-symbiont interactions. New model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory, focusing on a broad range of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities. In this Research Topic, we invited researchers to contribute their work on diverse symbiotic networks, since there are a large variety of symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems, and we wished the Topic to provide a venue for communicating findings across diverse taxonomic groups. A synthesis of recent investigations in symbiosis can impact areas such as agriculture, where a basic understanding of plant-microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation; climate change, where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs; animal and human health, where unbalances in host microbiomes are being increasingly associated with a wide range of diseases; and biotechnology, where process optimization can be achieved through optimization of symbiotic partnerships. Overall, our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework, in the road to finally establish symbiology as an overdue central discipline of biological science.

Recent Trends in Theory of Physical Phenomena in High Magnetic Fields Israel D. Vagner, Peter Wyder, Tsofar Maniv, 2012-12-06
A comprehensive collection of papers on theoretical aspects of electronic processes in simple and synthetic metals, superconductors, bulk and low-dimensional semiconductors under extreme conditions, such as high magnetic and electric fields, low and ultra-low temperatures. The main emphasis is on low-dimensional conductors and superconductors, where correlated electrons, interacting with magnetic or nonmagnetic impurities, phonons, photons, or nuclear spins, result in a variety of new physical phenomena, such as quantum oscillations in the superconducting state, Condon instability, Skyrmions and composite fermions in quantum Hall effect systems, and hyperfine field-induced mesoscopic and nanoscopic phenomena. Several new experimental achievements are reported that promise to delineate future trends in low temperature and high magnetic field physics, including the experimental observation of the interplay between superconductivity and nuclear spin ordering at ultra-low temperatures, new observations of Condon domains in normal metals, and an experimental proposal for the realisation of isotopically engineered, semiconductor-based spin-qubit elements for future quantum computation and communication technology.

Doing Recent History Claire Bond Potter, Renee C. Romano, 2012-04-25
Recent history—the very phrase seems like an oxymoron. Yet historians have been writing accounts of the recent past since printed history acquired a modern audience, and in the last several years interest in recent topics has grown exponentially. With subjects as diverse as Walmart and disco, and personalities as disparate as Chavez and Schlafly, books about the history of our own time have become arguably the most exciting and talked-about part of the discipline. Despite this rich tradition and growing popularity, historians have engaged in little discussion about the specific methodological, political, and ethical issues related to writing about the recent past. The twelve essays in this collection explore the challenges of writing histories of recent events where visibility is inherently imperfect, hindsight and perspective are lacking, and historiography is underdeveloped. Those who write about events that have taken place since 1970 encounter exciting challenges that are both familiar and foreign to scholars of a more distant past, including suspicions that their research is not historical enough, negotiation with living witnesses who have a very strong stake in their own representation, and the task of working with new electronic sources. Contributors to this collection consider a wide range of these challenges. They question how sources like television and video games can be better utilized in historical research, explore the role and regulation of doing oral histories, consider the ethics of writing about living subjects, discuss how historians can best navigate questions of privacy and copyright law, and imagine the possibilities that new technologies offer for creating transnational and translingual research opportunities. *Doing Recent History* offers guidance and insight to any researcher considering tackling the not-so-distant past.

Recent Advances in Coupled-cluster Methods Rodney J. Bartlett, 1997
Today, coupled-cluster (CC) theory has emerged as the most accurate, widely applicable approach for the correlation problem in molecules. Furthermore, the correct scaling of the energy and wavefunction with size (i.e. extensivity) recommends it for studies of polymers and crystals as well as molecules. CC methods have also paid dividends for nuclei, and for certain strongly correlated systems of interest in field theory. In order for CC methods to have achieved this distinction, it has been necessary to formulate new, theoretical approaches for the treatment of a variety of essential quantities. These include properties and, particularly, analytical first derivatives (gradients) that readily

provide the forces on the atoms in a molecule to facilitate searching potential energy surfaces for structures and transition states; second derivatives (Hessians) which indicate the type of extremum point and provide vibrational frequencies and intensities; excited, ionized, and electron attached states including their properties; multi-configurational reference functions to add important non-dynamic correlation; and relativistic effects. This book addresses very recent work in each of the above topics in ten chapters written by leading experts in molecular CC theory. This is NOT a collection of reviews, but is, instead, forefront research explained in an unusually clear exposition. Each chapter presents new results and formulations that offer another step toward providing the next generation of powerful CC solutions. The gap that often exists between text books and research can be more of a chasm in highly technical fields like CC theory, but this volume helps to fill the void, as it provides a sequel to a graduate level course in CC theory and many-electron methods. Essentially all current directions for new research are well represented in the authoritative articles.

Recent Progress in Hormone Research Gregory Pincus, 2013-10-22 Recent Progress in Hormone Research, Volume III contains papers delivered at the 1947 Laurentian Hormone Conference. This volume is organized into five parts encompassing 12 chapters that cover growth, metabolic, and steroid hormones. The opening parts cover the biochemical and physiological aspects of growth, metabolic, and steroid hormones. These parts particularly review the functions of the so-called sexogens, as well as some diseases caused by steroids, such as the Addison's disease. The succeeding parts describe the methods adaptable to the study of metabolic hormone problems. The remaining two parts discuss the testis physiology and function, the role of hormones in hypertension. These parts also consider the participation of the other system of the body, such as the renal pressor system and central nervous system in hypertension. The factors influencing the hormonal defense mechanism are also examined. This book will prove useful to endocrinologists.

Recent Progress in Hormone Research James H. Clark, 2013-10-22 Recent Progress in Hormone Research, Volume 46 provides a superior summary of the developments in the field of hormone research. The book discusses the molecular basis of androgen insensitivity; the tissue-specific expression of the growth hormone gene and its control by growth hormone factor-1; and the molecular characterization of mammalian tachykinin receptors and a possible epithelial potassium channel. The text also describes the properties of the guanylate cyclase receptor family; insulin-like growth factor-binding proteins; and growth hormone receptor and binding protein. Mutations in the insulin receptor gene in genetic forms of insulin resistance; the characteristics of the cAMP response unit; and the role and secretion of inhibin in the rat are also considered. The book further tackles the structure of the lutropin/choriogonadotropin receptor and the gene for multiple endocrine neoplasia type 2a. Endocrinologists, physiologists, and biochemists will find the text invaluable.
