Recovery of Images from the AMOS ELSI Data for STS-33 David J. Knecht,1990 During the STS-33 space-shuttle mission in November 1989, ground-based observations of the shuttle were made from the Air Force Maui Optical Station (AMOS) in Hawaii during five orbits that passed near the observatory. The objective of these measurements was the study of interactions between contaminant gases of the shuttle and the residual atmosphere at orbit altitude. The Enhanced Longwave Spectral Imager (ELSI) was one of the instruments used. The ELSI employs two infrared-sensitive array detectors at a telescope focal plane. The recorded digital data from the MWIR detector used in this instance were found to be unusable under ordinary processing methods because five of the twelve bits in each pixel value were found not to be operating. This report describes the further examination of these data, the discovery of other faults in the instrument, and the subsequent development of software routines and a correction algorithm that succeeded in completely recovering the true images contained in the data. Criteria for the success of this method are examined in the course of describing the design of the algorithm. The method has been transferred to the organization that will process similarly flawed classified data from this instrument.

Sensor Signal and Information Processing II Wai Lok Woo ,Bin Gao,2020-12-29 In the current age of information explosion, newly invented technological sensors and software are now tightly integrated with our everyday lives. Many sensor processing algorithms have incorporated some forms of computational intelligence as part of their core framework in problem solving. These algorithms have the capacity to generalize and discover knowledge for themselves and learn new information whenever unseen data are captured. The primary aim of sensor processing is to develop techniques to interpret, understand, and act on information contained in the data. The interest of this book is in developing intelligent signal processing in order to pave the way for smart sensors. This involves mathematical advancement of nonlinear signal processing theory and its applications that extend far beyond traditional techniques. It bridges the boundary between theory and application, developing novel theoretically inspired methodologies targeting both longstanding and emergent signal processing applications. The topic ranges from phishing detection to integration of terrestrial laser scanning, and from fault diagnosis to bio-inspiring filtering. The book will appeal to established practitioners, along with researchers and students in the emerging field of smart sensors processing.

Historic Photos of Seattle in the 50s, 60s, and 70s ,2010-07-28 History is more than dates and events. History is images often as mundane as a shopper buying vegetables or a lost view of a neighborhood transformed by development. In the three decades following the midcentury mark, Seattle photographers captured the city day-to-day, to have their exposures published once, or not at all, and then relegated to the darkness of an archive. Historic Photos of Seattle in the 50s, 60s, and 70s compiles photos that recover some of the memories. Mary Randlett and Josef Scaylea are widely known and highly regarded for their work with light and film, and their work appears here. For some photos, the names of city employees and other professionals of lesser note, but no less skill, can be credited. And for many, the photographer's name is lost to time, but his work endures.

Happenstance Robert Root,2013-11-01 Reflecting on how a student's parents met because of a fly ball to center field in a summer softball game, author Robert Root wondered how the lives of that student's parents and of the student himself would have changed had the batter bunted or struck out. Haunted by this pure example of happenstance, he began to ponder his own existence, dependent in part on geology (the Niagara Escarpment) and history (the Erie Canal). He wondered how happenstance had influenced the course of his parents' lives, in particular their marriages (they married and divorced each other twice), and consequently the shaping of his identity. Happenstance investigates the effects of that phenomenon and choice on one man's life. Root explores this theme in interwoven strands of narrative, interpretation, and reflection. One strand, "The Hundred Days," follows his attempt to write one hundred journal entries, each about a different day in his life, to recover memories of specific moments or collections of moments. In the strand headed "Album," he examines and interprets old family photographs in light of the way he reads them in the present, as someone now privy to a family secret that directed his and his siblings' lives without their knowledge. Interspersed among these brief interpretations and narratives are reflections on happenstance and choice, a sequence contemplating their effect on his life and perhaps on all our lives. Through juxtaposition and accumulation, the book's incremental unraveling of meaning imitates the process of unexpected epiphanies and gradual self-discovery in anyone's life. By revisiting individual days, giving voice to photographs that mutely preserve family moments, and reflecting on the way happenstance and choice determine the directions lives take, Robert Root generates a meditation on identity anchored in an album in words and images of a mid-twentieth-century life.

America Recovered Chad Ress,Jordan H. Carver,2021-03-25 America Recovered reveals the point where abstract political processes manifest themselves in the physical world, thus providing an alternate means of experiencing the contemporary American landscape. Collectively, the images

and essays show what aspects of our everyday lives are being assigned value in the promise of a recovered America. America Recovered collects forty images that mark one of the only efforts to document the breadth of projects funded by the 2009 American Recovery and Reinvestment Act. Unlike the New Deal and other programs designed for employment and infrastructural development, the Recovery Act was passed without any funds dedicated for photographic documentation. Using an official government website as his guide, Chad Ress took photographs of projects across the country. The publication of America Recovered at this moment allows for a critical reassessment of the Act and its lasting impact on the American landscape. The two essays by architectural writer Jordan H. Carver and photography historian Miriam Paeslack situate Ress’s photographs within broader discourses of urbanism, infrastructure, and politics. The question of what role the government should play in everyday life remains one of the touchstone issues in American politics. The photographs and essays ask a different set of questions, not whether government spending is good or bad, whether it worked or didn’t, but what, exactly does government spending look like. And importantly, America Recovered asks how government spending and civic identity are constructed around place.
