Biographical Ruptures and Their Repair Amrei C. Joerchel, Gerhard Benetka, 2014-11-01 Biographical ruptures and their repairs: Cultural transitions in development represents the efforts of bridging theoretical, methodological, and practice oriented issues revolving around the notion of biographical ruptures and their repairs. The aim is to bring novel understandings from cultural psychological perspectives to the debate of what it means to be a developing human being in an ever changing world. Contrary to mainstream psychology ruptures and repairs are here not necessarily understood as a personal experience, which must be overcome through various coping strategies. Rather, ruptures are understood as experiences, which necessarily emerge out of the complex interrelatedness of intra-psychological, inter-personal, and societal processes. Moving along these different levels of analysis, each of the 13 chapters of this book contributes to the general cultural psychological understanding of ruptures from their own particular standpoint. The notion of ruptures and their repairs are discussed from such differing standpoints such as classical developmental psychological theories and challenges to such developmental approaches. They are discussed in relation to racial interpellations using the documentary method and social representations theory. On the object level ruptures are pointed out within popular music videos and from a Ganzheitspsychological approach and others. The current book thus does not only represent a conglomerate of various theoretical, methodological, or practice oriented approaches to ruptures and their repairs, each adding with their own expertise to a better understanding of the phenomenon in its whole. It also demonstrated a lively debate between leading specialists and practitioners from different disciplines and countries. Theoretical and methodological issues, as well as ethical and moral ones, are each discussed from their own cultural psychological viewpoint. This book will interest practitioners, scientists and students or anyone who is interested in biographical rupture and their repairs from a cultural psychological, developmental, social psychological or psychotherapeutic viewpoint.

State of Good Repair Harry S. Cohen, Joseph Barr, 2012 TRB's Transit Cooperative Research Program (TCRP) Report 157: State of Good Repair: Prioritizing the Rehabilitation and Replacement of Existing Capital Assets and Evaluating the Implications for Transit presents a framework that builds upon a set of fundamental concepts and provides a basic set of steps for transit agencies to follow when evaluating and prioritizing capital asset rehabilitation and replacement investments. In addition to the printed report, an analytical approach and set of spreadsheet tools were developed to support the framework. These tools address how to evaluate rehabilitation and replacement actions for specific types of transit assets, and how to prioritize candidate rehabilitation and replacement actions.--Publisher's description.

Handbook of Neurologic Music Therapy Michael Thaut, Volker Hoemberg, 2016 Neurologic Music Therapy (NMT) is a form of music therapy developed for people suffering from cognitive, sensory, or motor dysfunctions - arising from neurological diseases of the nervous system. People who can benefit from this therapy include sufferers from: stroke, traumatic brain injury, Parkinson's and Huntington's disease, cerebral palsy, Alzheimer's disease, autism, and other neurological diseases affecting cognition, movement, and communication (e.g., MS, Muscular Dystrophy, etc). The Handbook of Neurologic Music Therapy is a comprehensive landmark text presenting a new and revolutionary model of music in rehabilitation, therapy and medicine that is scientifically validated and clinically tested. The relationship between music and language Lutz Jäncke, Traditionally, music and language have been treated as different psychological faculties. This duality is reflected in older theories about the lateralization of speech and music in that speech functions were thought to be localized on the left and music functions on the right

hemisphere. But with the advent of modern brain imaging techniques and the improvement of neurophysiological measures to investigate brain functions an entirely new view on the neural and psychological underpinnings of music and speech has evolved. The main point of convergence in the findings of these new studies is that music and speech functions have many aspects in common and that several neural modules are similarly involved in speech and music. There is also emerging evidence that speech functions can benefit from music functions and vice versa. This new research field has accumulated a lot of new information and it is therefore timely to bring together the work of those researchers who have been most visible, productive, and inspiring in this field and to ask them to present their new work or provide a summary of their laboratory's work.

Repair, Do-It-Yourself and Circular Economy Michael Jonas, Sebastian Nessel, Nina Tröger, 2023-07-15 Repair & Do-It-Yourself activities on the one hand and discussions about the circular economy on the other hand are currently regarded as promising examples of how current modes of consumption and production can be reorganized and redesigned in the sense of a sustainable society. This volume discusses the relevance, the interactions as well as the possibilities and limits of the aforementioned phenomena of repairing, do-it-yourself and longer use on the one hand and the circular economy on the other, from both a scientific and a practical perspective.

Routledge International Handbook of Emotions and Media Katrin Döveling, Elly A. Konijn, 2021-11-09 In times of a worldwide pandemic, the election of a new US president, MeToo, and Fridays for Future, to name but a few examples, one thing becomes palpable: the emotional impact of media on individuals and society cannot be underestimated. The relations between media, people, and society are to a great extent based on human emotions. Emotions are essential in understanding how media messages are processed and how media affect individual and social behavior as well as public social life. Adopting a thoroughly interdisciplinary approach to the study of emotions in the context of media, the second, entirely revised and updated, edition of Routledge International Handbook of Emotions and Media comprises areas such as evolutionary psychology, media psychology, media sociology, cultural studies, media entertainment, and political and digital communication. Leading experts from across the globe explore cutting-edge research on the role of emotion in selecting and processing media contents, the emotional consequences of media use, politics and public emotion, emotions in political communication and persuasion, as well as emotions in digital, interactive, and virtual encounters. This compelling and authoritative Handbook is an essential reference tool for scholars and students of media, communication science, media psychology, emotion, cognitive and social psychology, cultural studies, media sociology, and related fields.

Neurocognitive Music Therapy Rafael Ramirez-Melendez,

Dialogues in Music Therapy and Music Neuroscience: Collaborative Understanding Driving Clinical Advances Julian O'Kelly, Jörg C. Fachner, Mari Tervaniemi, 2017-06-30 Music is a complex, dynamic stimulus with an unparalleled ability to stimulate a global network of neural activity involved in attention, emotion, memory, communication, motor co-ordination and cognition. As such, it provides neuroscience with a highly effective tool to develop our understanding of brain function, connectivity and plasticity. Increasingly sophisticated neuroimaging technologies have enabled the expanding field of music neuroscience to reveal how musical experience, perception and cognition may support neuroplasticity, with important implications for the rehabilitation and assessment of those with acquired brain injuries and neurodegenerative conditions. Other studies have indicated the potential for music to

support arousal, attention and emotional regulation, suggesting therapeutic applications for conditions including ADHD, PTSD, autism, learning disorders and mood disorders. In common with neuroscience, the music therapy profession has advanced significantly in the past 20 years. Various interventions designed to address functional deficits and health care needs have been developed, alongside standardised behavioural assessments. Historically, music therapy has drawn its evidence base from a number of contrasting theoretical frameworks. Clinicians are now turning to neuroscience, which offers a unifying knowledge base and frame of reference to understand and measure therapeutic interventions from a biomedical perspective. Conversely, neuroscience is becoming more enriched by learning about the neural effects of 'real world' clinical applications in music therapy. While neuroscientific imaging methods may provide biomarking evidence for the efficacy of music therapy interventions it also offers important tools to describe time-locked interactive therapy processes and feeds into the emerging field of social neuroscience. Music therapy is bound to the process of creating and experiencing music together in improvisation, listening and reflection. Thus the situated cognition and experience of music developing over time and in differing contexts is of interest in time series data. We encouraged researchers to submit papers illustrating the mutual benefits of dialogue between music therapy and other disciplines important to this field, particularly neuroscience, neurophysiology, and neuropsychology. The current eBook consists of the peer reviewed responses to our call for papers.

Music and Consciousness 2 Ruth Herbert, David Clarke, Eric Clarke, 2019-04-11 Consciousness has been described as one of the most mysterious things in the universe. Scientists, philosophers, and commentators from a whole range of disciplines can't seem to agree on what it is, generating a sizeable field of contemporary research known as consciousness studies. Following its forebear *Music and Consciousness: Philosophical, Psychological and Cultural Perspectives* (OUP, 2011), this volume argues that music can provide a valuable route to understanding consciousness, and also that consciousness opens up new perspectives for the study of music. It argues that consciousness extends beyond the brain, and is fundamentally related to selves engaged in the world, culture, and society. The book brings together an interdisciplinary line up of authors covering topics as wide ranging as cognitive psychology, neuroscience, psychoanalysis, philosophy and phenomenology, aesthetics, sociology, ethnography, and performance studies and musical styles from classic to rock, trance to Daoism, jazz to tabla, and deep listening to free improvisation. *Music and Consciousness 2* will be fascinating reading for those studying or working in the field of musicology, those researching consciousness as well as cultural theorists, psychologists, and philosophers.

Music Therapy Leslie Bunt, Brynjulf Stige, 2014-04-24 Music therapy is recognised as being applicable to a wide range of healthcare and social contexts. Since the first edition of *Music Therapy: An art beyond words*, it has extended into areas of general medicine, mainstream education and community practice. This new edition revises the historical and theoretical perspectives and recognises the growing evidence and research base in contemporary music therapy. Leslie Bunt and Brynjulf Stige document the historical evolution of music therapy and place the practice within seven current perspectives: medical, behavioural, psychoanalytical, humanistic, transpersonal, culture-centred and music-centred. No single perspective, individual or group approach is privileged, although the focus on the use of sounds and music within therapeutic relationships remains central. Four chapters relate to areas of contemporary practice across different stages of the lifespan: child health, adolescent health, adult health and older adult health. All include case narratives and detailed examples underpinned by selected theoretical and research perspectives. The final two chapters of the book reflect on the evolution of the profession as a community resource and the emergence of music therapy as an academic discipline in its own right. A concise introduction to the current practice of music therapy around the world, *Music Therapy: An art beyond words* is an invaluable resource for professionals in music therapy and music education, those working in the psychological therapies, social work and other caring professions, and students at all levels.

Music and Disorders of Consciousness: Emerging Research, Practice and Theory Wendy L. Magee, Barbara Tillmann, Fabien Perrin, Caroline Schnakers, 2017-02-28 Music processing in severely brain-injured patients with disorders of consciousness has been an emergent field of interest for over 30 years, spanning the disciplines of neuroscience, medicine, the arts and humanities. Disorders of consciousness (DOC) is an umbrella term that encompasses patients who present with disorders across a continuum of consciousness including people who are in a coma, in vegetative state (VS)/have unresponsive wakefulness syndrome (UWS), and in minimally conscious state (MCS). Technological developments in recent years, resulting in improvements in medical care and technologies, have increased DOC population numbers, the means for investigating DOC, and the range of clinical and therapeutic interventions under validation. In neuroimaging and behavioural studies, the auditory modality has been shown to be the most sensitive in diagnosing awareness in this complex population. As misdiagnosis remains a major problem in DOC, exploring auditory responsiveness and processing in DOC is, therefore, of central importance to improve therapeutic interventions and medical technologies in DOC. In recent years, there has been a growing interest in the role of music as a potential treatment and medium for diagnosis with patients with DOC, from the perspectives of research, clinical practice and theory. As there are almost no treatment options, such a non-invasive method could constitute a promising strategy to stimulate brain plasticity and to improve consciousness recovery. It is therefore an ideal time to draw together specialists from diverse disciplines and interests to share the latest methods, opinions, and research on this topic in order to identify research priorities and progress inquiry in a coordinated way. This Research Topic aimed to bring together specialists from diverse disciplines involved in using and researching music with DOC populations or who have an interest in theoretical development on this topic.

Specialists from the following disciplines participated in this special issue: neuroscience; medicine; music therapy; clinical psychology; neuromusicology; and cognitive neuroscience.
