Smart Information Systems Frank Hopfgartner, 2015-01-14 This text presents an overview of smart information systems for both the private and public sector, highlighting the research questions that can be studied by applying computational intelligence. The book demonstrates how to transform raw data into effective smart information services, covering the challenges and potential of this approach. Each chapter describes the algorithms, tools, measures and evaluations used to answer important questions. This is then further illustrated by a diverse selection of case studies reflecting genuine problems faced by SMEs, multinational manufacturers, service companies, and the public sector. Features: provides a state-of-the-art introduction to the field, integrating contributions from both academia and industry; reviews novel information aggregation services; discusses personalization and recommendation systems; examines sensor-based knowledge acquisition services, describing how the analysis of sensor data can be used to provide a clear picture of our world.

Smart Information and Knowledge Management Edward Szczerbicki, 2009-12-01 New approaches are needed that could move us towards developing effective applicable intelligent systems for problem solving and decision making, One of the main efforts in intelligent systems development is focused on knowledge and information management which is regarded as the crucial issue in smart decision making support. The 14 Chapters of this book represent a sample of such effort. The overall aim of this book is to provide guidelines to develop tools for smart processing of knowledge and information. Still, the guide does not presume to give ultimate answers. Rather, it poses ideas and case studies to explore the complexities and challenges of modern knowledge management issues. It also encourages its reader to become aware of the multifaceted interdisciplinary character of such issues. The premise of this book is that its reader will leave it with a heightened ability to think - in different ways - about developing, evaluating, and supporting intelligent knowledge and information management systems in real life based environment.

Data Smart John W. Foreman, 2013-10-31 Data Science gets thrown around in the press like it's magic. Major retailers are predicting everything from when their customers are pregnant to when they want a new pair of Chuck Taylors. It's a brave new world where seemingly meaningless data can be transformed into valuable insight to drive smart business decisions. But how does one exactly do data science? Do you have to hire one of these priests of the dark arts, the data scientist, to extract this gold from your data? Nope. Data science is little more than using straight-forward steps to process raw data into actionable insight. And in *Data Smart*, author and data scientist John Foreman will show you how that's done within the familiar environment of a spreadsheet. Why a spreadsheet? It's comfortable! You get to look at the data every step of the way, building confidence as you learn the tricks of the trade. Plus, spreadsheets are a vendor-neutral place to learn data science without the hype. But don't let the Excel sheets fool you. This is a book for those serious about learning the analytic techniques, the math and the magic, behind big data. Each chapter will cover a different technique in a spreadsheet so you can follow along: Mathematical optimization, including non-linear programming and genetic algorithms Clustering via k-means, spherical k-means, and graph modularity Data mining in graphs, such as outlier detection Supervised AI through logistic regression, ensemble models, and bag-of-words models Forecasting, seasonal adjustments, and prediction intervals through monte carlo simulation Moving from spreadsheets into the R programming language You get your hands dirty as you work alongside John through each technique. But never fear, the topics are readily applicable and the author laces humor throughout. You'll even learn what a dead squirrel has to do with optimization modeling, which you no doubt are dying to know.

Searching for Health Kapil Parakh, Anna Dirksen, 2021-04-20 An insider's guide to searching online, communicating with your physician, and maximizing your health from a doctor who works at Google. We've all been there. Late at night, staring into the glow of a phone trying to make sense of some health-related issue that we know nothing about. In *Searching for Health*, Dr. Kapil Parakh, with Anna Dirksen, brings to life knowledge he gained from working at Google and practicing medicine. Helping readers avoid common pitfalls, get the information they need, and partner effectively with their health team to figure out a path to good health together, the book distills decades of scientific research into a set of easy-to-follow tips. It also incorporates • firsthand accounts of common challenges on the path to good health; • an inside look at how doctors approach and assess health-related information; • techniques that consumers can use to locate evidence-based information online, whether in blogs, social media postings, forums, or news stories; • guidance on how individuals can make the best use of new technologies, such as health trackers and other applications; • recommendations to help patients assess health information for themselves and make decisions based on what they find; • brief summaries of the scientific studies underpinning the recommendations; and • online and offline resources—including handy checklists and worksheets—to help readers prepare for appointments, discuss tough topics with their doctors, and take control of their health. In addition to helping readers find evidence-based information online, the book provides insights into what you can expect from a visit to a doctor or hospital, how to make a decision about surgery or other treatment, what tests doctors will order, which symptom trackers are really effective, and what questions to ask about medications, supplements, and more. *Searching for Health* is a valuable resource for charting a healthier path through life.

Do It Smart Jurgen Ringback, 1999-12-22 A decade ago, manufacturing companies had visions of paperless offices, automated plants, and virtual enterprises. But the euphoria quickly evaporated when these visions failed to materialize. Now, from in-depth interviews in a worldwide survey of seventy manufacturing firms, a research team from the prestigious consulting group McKinsey & Company concludes that, far from being a failure, information technology (IT) can be a vital strategic weapon in the manufacturing sector, just as it has proved to be in service industries. In *Do IT Smart*, experts Rolf-Dieter Kempis and Jürgen Ringbeck along with the McKinsey team identify four cultures of IT users -- stars, big spenders, cautious spenders, and laggards -- based on how efficiently and effectively the users manage IT. The stars stand out because their strong command of IT means they

are better able to manage core processes such as R&D, sales and service, and order processing, which in turn produces tangible payoffs in profitability, growth, and market share. From their study of star performers, the authors formulate seven rules for developing a superior IT organization. First, they argue, managers must make IT a top management issue and, second, a priority in product development. IT must be viewed as a strategic tool so that IT strategy can be aligned with business strategy. Clear objectives must be set, and core business processes redesigned. Warning that IT is reaching saturation in administrative applications, the authors describe how it is far more profitable to integrate IT into marketing, sales, and customer service. Finally, they describe how all these elements must be brought together into a lean, customer-oriented IT network. McKinsey's breakthrough study shows that as organizations are increasingly overwhelmed with data, IT will become more of a dividing line between the winners and the losers. IT stars will make quantum leaps in effectiveness, while poor management of IT results in a cost explosion. Managers and information officers who want their business to keep and gain the competitive edge IT offers need this unprecedented insight into how to Do IT Smart.

Creating Smarter Cities Mark Deakin, 2013-09-13 Drawing upon the smart experiences of world class cities in North America, Canada and Europe, this book provides the evidence to show how entrepreneurship-based and market-dependent representations of knowledge production are now being replaced with a community of policy makers, academic leaders, corporate strategists and growth management alliances, with the potential to liberate cities from the stagnation which they have previously been locked into by offering communities: the freedom to develop policies, with the leadership and strategies capable of reaching beyond the idea of creative slack; a process of reinvention, whereby cities become smarter, in using intellectual capital to not only meet the efficiency requirements of wealth creation, but to become centres of creative slack; the political leadership capable of not only being economically innovative, or culturally creative, but enterprising in opening-up, reflexively absorbing and discursively shaping the democratic governance of such developments; the democratic governance to sustain such developments. Drawing together the critical insights from papers from a collection of leading international experts on the transition to smart cities, this book proposes to do what has recently been asked of those responsible for creating Smarter Cities. That is: provide the definitional components, critical insights and institutional means by which to get beyond the all too often self-congratulatory tone cities across the world strike when claiming to be smart and by focussing on the critical role master-plans and design codes play in supporting the sustainable development of communities. This book was published as a special issue of *Urban Technology*.

The Internet of Things for Smart Urban Ecosystems Franco Cicirelli, Antonio Guerrieri, Carlo Mastroianni, Giandomenico Spezzano, Andrea Vinci, 2018-08-10 The main objective of this book is to provide a multidisciplinary overview of methodological approaches, architectures, platforms, and algorithms for the realization of an Internet of Things (IoT)-based Smart Urban Ecosystem (SUE). Moreover, the book details a set of real-world applications and case studies related to specific smart infrastructures and smart cities, including structural health monitoring, smart urban drainage networks, smart grids, power efficiency, healthcare, city security, and emergency management. A Smart Urban Ecosystem (SUE) is a people-centric system of systems that involves smart city environments, applications, and infrastructures. SUEs require the close integration of cyber and physical components for monitoring, understanding and controlling the urban environment. In this context, the Internet of Things (IoT) offers a valuable enabling technology, as it bridges the gap between physical things and software components, and empowers cooperation between distributed, pervasive, and heterogeneous entities.

Information Materials Manuel Kretzer, 2016-11-03 This book considers the potential of new, smart materials and their use in architecture. It begins with an overview of current global tendencies (technological, demographic, and socio-anthropological) and their relevance for architectural design. Expanding upon approaches for flexible design solutions to address change and uncertainty, Dr. Kretzer begins by exploring adaptive architecture and proceeds to introduce the topic of "information materials," which encompasses smart and functional materials, their current usage, and their potential for the creation of future spaces. The second chapter provides a comprehensive overview of architectural materials, past and present, split into the topics: natural, industrial, synthetic, digital, and information materials. Chapter three introduces an educational approach for the mediation of information material usage in design courses and student workshops. The final section provides detailed information on a range of emerging material phenomena, including aerogels, bioluminescence, bio plastics, dye-sensitized solar cells, electroluminescent displays, electroactive polymers, soft robotics, and thermochromics. Each section explains its respective history, working principles, fabrication and (potential) usage in architecture and design, and provides hands-on tutorials on how to self-produce these materials, and displays class-tested experimental installations. The book concludes with an outlook into the domain of synthetic biology

and the prospects of a “living” architecture. It is ideal for students of structural materials engineering, architecture, and urban planning; professionals working these in areas, as well as materials science/engineering and architecture educators.
