Netnography Robert V Kozinets, 2015-05-15 Social media and Internet data offer rich opportunities and vexing challenges for sociocultural research. Explaining and extending prior approaches, Netnography: Redefined is an indispensable guide to the understanding and conduct of Internet ethnography. With this volume, netnography is upgraded, updated and renewed with the latest netnographic research from media anthropology, geography, education, library sciences, travel and tourism, linguistics, media and cultural studies, sociology, sexuality, addiction research, gaming studies, and nursing, and multiple examples from the worlds of Facebook, Twitter, LinkedIn, and other social media sites. Like its predecessor, Netnography: Redefined includes full, step-by-step procedural guidelines for the accurate and ethical conduct of netnography. Yet this edition adapts netnography to include big data and social media analytics, as well as further incorporating notions of network analysis. It deepens the practice of netnography through participative engagement, introspection, alternative representation, and a new humanist focus. Netnography: Redefined presents readers with up-to-date guidelines for the most fully realized and distinctive form of online ethnographic research yet developed.

What's Your Formula? Brian Washburn, 2021-06-29 Your Periodic Table of Learning Elements Engaging, effective training programs are a mixture of science and art, requiring the right balance of adult learning theory, available technology, intuitive tools, proven practices, creativity, and risk. How does a trainer find the right combination and proportion of these elements? How does a trainer know what's possible? To answer these questions, Brian Washburn offers a simple

yet elegant periodic table of learning elements modeled on the original periodic table of chemical properties. Washburn's elements—which are organized into solids, liquids, gases, radioactive, and interactive categories similar to their chemical cousins—are metaphors for the tools and strategies of the field of learning design; when they're combined, and under certain conditions, they have the potential to create amazing learning experiences for participants. They are that impactful. From critical gas-like elements like the air we breathe, present in every training room (think instructional design or visual design), to radioactive elements, powerful and dangerous yet commonly used (think PowerPoint), Washburn guides you through the pitfalls and choices you confront in creating engaging learning experiences. A well-designed training program can be world-changing, he argues, and if you believe in your craft as a learning professional, you can do this too. Whether you're an experienced learning designer or new to the field, this book inspires with new ideas and ways to organize the design of your learning programs. With stories from Washburn's professional experience, the book includes a hands-on glossary of definitions and descriptions for more than 50 of his elements.

### **The Networked Image in Post-Digital Culture**

Andrew Dewdney, Katrina Sluis, 2022-07-12 This collection examines how the networked image establishes new social practices for the user and presents new challenges for cultural practitioners engaged in making, curating, teaching, exhibiting, archiving and preserving born-digital objects. The mode of vision and imaging, established through photography over the previous two centuries, has and continues to be radically reconfigured by a hybrid of algorithms, computing, programmed capture and display devices, and an array of

online platforms. The image under these new conditions is filtered, fluid, fleeting, permeable, mobile and distributed and is changing our ways of seeing. The chapters in this volume are the outcome of research conducted at the Centre for the Study of the Networked Image (CSNI) and its collaboration with The Photographers' Gallery over the last ten years. The book's contributors investigate radical changes in the meanings and values of hybridised media in socio-technical networks and speak to the creeping automation of culture through applications of AI, social media platforms and the financialisation of data. This interdisciplinary collection draws upon media and cultural studies, art history, art practice, photographic theory, user design, animation, museology and computer science as a way of making sense of the specific cultural consequences of the rapid succession of changes in image technologies and to bring the story up to date. It will be of particular interest to scholars and students of visual culture, media studies and photography.

**Optimizing Discovery Systems to Improve User Experience** Bonnie Imler, Michelle

Eichelberger, 2017-05-24 Two authors with more than 40 years of combined library experience tap into their wealth of knowledge about discovery and user experience, sharing proven methods for setting up, promoting, and teaching their own discovery systems. Discovery systems are the new one-stop search model for libraries, but simply implementing the software doesn't ensure that it will meet your users' search needs. This book looks at how discovery systems are actually used by examining the findings of several user experience (UX) studies, providing data and observations that will inform your decisions about selecting, implementing, and enhancing this software. This book provides library practitioners

who choose, administer, and interact with discovery systems with insight for establishing or fine-tuning a discovery system. You will understand how the use and effectiveness of the top discovery systems compare to more traditional databases and web resources, get insight into the comparative strengths and weaknesses of the best-selling discovery systems, and examine the UX research findings of the authors on student response and faculty response. You'll also learn about key configuration options that help or hinder search success with these systems and affect content selection, linking software setup, and interlibrary loan processes. The book concludes with recommended best practices for promoting discovery systems, including web design, placement on the library's website, getting coworkers on board, and PR ideas.
