Historical and Multidisciplinary Perspectives on Hope Steven C. van den Heuvel, 2020-07-20 This open access volume makes an important contribution to the ongoing research on hope theory by combining insights from both its long history and its increasing multi-disciplinarity. In the first part, it recognizes the importance of the centuries-old reflection on hope by offering historical perspectives and tracing it back to ancient Greek philosophy. At the same time, it provides novel perspectives on often-overlooked historical theories and developments and

challenges established views. The second part of the volume documents the state of the art of current research in hope across eight disciplines, which are philosophy, theology, psychology, economy, sociology, health studies, ecology, and development studies. Taken together, this volume provides an integrated view on hope as a multi-faced phenomenon. It contributes to the further understanding of hope as an essential human capacity, with the possibility of transforming our human societies.

Building Inclusive Cities Carolyn

Whitzman,Crystal Legacy,Caroline Andrew,2013 Building on a growing movement within developing countries in Latin America, Africa, and Asia-Pacific, as well as Europe and North America, this book documents cutting edge practice and builds theory around a rights based approach to women's safety in the context of poverty reduction and social inclusion. Drawing upon two decades of research and grassroots action on safer cities for women and everyone, this book is about the right to an inclusive city. The first part of the book describes the challenges that women face regarding access to essential services, housing security, liveability and mobility. The second part of the

book critically examines programs, projects and ideas that are working to make cities safer. Building Inclusive Cities takes a cross-cultural learning perspective from action research occurring throughout the world and translates this research into theoretical conceptualizations to inform the literature on planning and urban management in both developing and developed countries. This book is intended to inspire both thought and action.

Advances in Renewable Hydrogen and Other Sustainable Energy Carriers Abdallah

Khellaf, 2020-08-19 This book examines a broad range of advances in hydrogen energy and alternative fuel developments and their role in the energy transition. The respective contributions were presented at the International Symposium on Sustainable Hydrogen, held in Algiers, Algeria on November 27-28, 2019. The transition from non-renewable polluting energy to sustainable green energy requires not only new energy sources but also new storage techniques and smart energy management. This situation has sparked renewed interest in hydrogen and alternative fuels, as they could help meet these needs. Indeed, hydrogen can not only be used as a clean energy vector or as an alternative fuel, but also as a storage medium or as an intermediary that enables improved energy management. This text offers a valuable reference guide for those working in the professional energy sector, as well as for students and instructors in academia who want to learn about the state of the art and future directions in the fields of hydrogen energy, alternative fuels and sustainable energy development.
