There's the giant whale shark - longer than two school buses but gentle enough to swim with humans; and the swell shark, which can wedge itself into a hideout and then swell so that it cannot be pulled out. There are sharks that lay eggs and sharks that have live babies. Some are small enough to fit into the palm of your hand, and some have teeth bigger than your fist. Join acclaimed author Laurence Pringle on a fascinating exploration of the wide variety of fish classified as sharks. Together with Meryl Henderson's beautiful and realistic illustrations, young readers will be taken on an unforgettable journey deep under the sea.

Shark Dean Crawford,2008-08-01 A sleek hunter of the seas, the shark has struck fear into the hearts of men since the days of the first fishermen. Dean Crawford now explores here the long relationship between shark and man, revealing that behind the fearsome caricature is a complex animal that deserves a thoughtful reconsideration. With a lineage stretching back over 100 million years, the shark has evolved into 350 different species, from the great white to the pike-bearing goblin to the tiny cookie-cutter. Crawford compiles here a fascinating narrative that analyzes how and why the animal looms large in our cultural psyche. While sharks have played a prominent part in religion and mythology, they are more commonly perceived as deadly predators—in such films as Jaws and Dr. No—or as symbols of natural violence, as in Hemingway’s Islands in the Stream. Shark ultimately argues, however, that our ill-informed emotional responses, spurred by such representations, have encouraged the wholesale slaughter of sharks—and our ignorance endangers the very existence of the shark today. Both a celebration of their lethal beauty and plea for their conservation, Shark urges us to shed our fears and appreciate the magnificence of this majestic animal.

Neighborhood Sharks Katherine Roy,2014-09-30 Up close with the ocean's most fearsome and famous predator and the scientists who study them—just twenty-six miles from the Golden Gate Bridge! A few miles from San Francisco lives a population of the ocean's largest and most famous predators. Each fall, while the city's inhabitants dine on steaks, salads, and sandwiches, the great white sharks return to California's Farallon Islands to dine on their favorite meal: the seals that live on the island's rocky coasts. Massive, fast, and perfectly adapted to hunting after 11 million years of evolution, the great whites are among the planet's most fearsome, fascinating, and least understood animals. In the fall of 2012, Katherine Roy visited the Farallons with the scientists who study the islands' shark population. She witnessed seal attacks, observed sharks being tagged in the wild, and got an up close look at the dramatic Farallons—a wildlife refuge that is strictly off-limits to all but the scientists who work there. Neighborhood Sharks is an intimate portrait of the life cycle, biology, and habitat of the great white shark, based on the latest research and an up-close visit with these amazing animals.

Sharks, Rays, and Chimaeras of California David Ebert,2003-05-08 Ebert has herein assembled an enormous body of knowledge about California's 43 shark species ranging from shark and human behavior to taxonomic minutiae, along with up-to-date explanations of their ecology, status and fisheries. More importantly, his Herculean effort includes the often-overlooked 25 species of skates, rays and chimaeras. That, along with the fine illustrations of Mat Squillante, should answer any question that a student, diver, natural history buff, or recreational or commercial fisher might ask.—John E. McCosker, coauthor of Great White Shark The timing of this publication is ideal given the status of some of California's elasmobranch populations and the need for a deeper understanding of their biology, ecology, and fishery management. The book is a comprehensive treatment—if one wants to find out the latest information on any species of shark or ray off California, this is the place to go. An outstanding work!—Gregor M. Cailliet, Professor, Moss Landing Marine Laboratories, and Director, Pacific Shark Research Center
