Short Message Service (SMS) Friedhelm Hillebrand,2010-01-21 Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

SMS Communication Louise-Amélie Cougnon,Cédrick Fairon,2014-07-15 The media often point an accusatory finger at new technologies; they suggest that there is always a loss of information or quality, or even that computer-mediated communication is destroying language. Most linguists, on the contrary, are firmly convinced that it is better to consider language as an evolving and changing entity. From this point of view, language is a social tool that has to be studied in-depth through the prism of objectivity, as a process in motion which is influenced by new social and technological stakes, rather than as a fading organism. In this volume we study and describe the societal phenomenon of SMS writing in its full complexity. The aim of this volume is threefold: to present recent linguistic research in the field of SMS communication; to inform the reader about existing large SMS corpora and processing tools and, finally, to display the many linguistic aspects that can be studied via a corpus of text messages. These articles were previously published in *Linguisticae Investigationes* Vol. 35:2 (2012).

How to Build an SMS Service Jordan Schwartz,Brian Retford,2007-06-21 The simple text message application that appears on virtually all mobile phones is the ultimate thin client, allowing your users access to the full computing power and informational depth of the Internet from a cheap cell phone on a mountaintop. Building an SMS service can be quite simple. This tutorial guides you through a variety of implementations, giving you the information you need to choose one that best fits your unique needs and circumstances. More than that, though, it seeks to help you understand the core principles necessary to make your service a success.

The Inside Text R. Harper,L. Palen,A. Taylor,2005-03-21 SMS or Text is one of the most popular forms of messaging. Yet, despite its immense popularity, SMS has remained unexamined by science. Not only that, but the commercial organisations, who have been forced to offer SMS by a demanding public, have had very little idea why it has been successful. Indeed, they have, until very recently, planned to replace SMS with other messaging services such as MMS. This book is the first to bring together scientific studies into the values that 'texting' provides, examining both cultural variation in countries as different as the Philippines and Germany, as well as the differences between SMS and other communications channels like Instant Messaging and the traditional letter. It presents usability and design research which explores how SMS will evolve and what is likely to be the pattern of person-to-person messaging in the future. In short, The Inside Text is a fundamental resource for anyone interested in mobile communications at the start of the 21st Century.

This Second Edition exploits the technical maturity of MMS as it is poised to generate a wealth of new business opportunities across the mobile communications sector. The author provides the fundamental technical background required for SMS, EMS and MMS, and supports this with industry cutting-edge developments. ● Contains a revised section on the

SMS Uprising: Mobile Activism in Africa Sokari Ekine, 2010-01-30 Providing a unique insight into how activists and social change advocates are addressing Africa's many challenges from within, this collection of essays by those engaged in using mobile phone technologies for social change provides an analysis of the socioeconomic, political, and media contexts faced by activists in Africa today. The articles address a broad range of issues--including inequalities in access to technology based on gender and rural and urban usage--and it offers practical examples of how activists are using mobile technology to organize and document their experiences. An overview of the lessons learned in making effective use of mobile phone technologies without any of the romanticism so often associated with the use of new technologies for social change is given. Examples are shared in a way that makes them easy to replicate, hoping to lead to greater reflection about the real potential and limitations of mobile technologies. Contributors include Ken Banks, Nathan Eagle, Anil Naidoo, Berna Ngolobe, and Juliana Rotich.

Email, SMS, MMS Carmen Frehner, 2008 Are email and SMS forms of writing or speech? This question cannot be answered easily because their registers are hybrid; they make use of both orality and literacy. This book offers an accurate placement of emails and text messages along the written/spoken continuum. Emails and text messages are also compared to letters and phone calls while a closer comparison of SMS and telegrams shows how far text messaging can be regarded as a renaissance of telegrams. Attention is further paid to multimedia messaging and questions concerning the proportion of image to text, picture categories as well as MMS dialogues are approached. The book finally comments on linguistic changes and deals with the German language community's concern with regard to the increasing use of Anglicisms.
