Inventory Optimization and Multi-Echelon Planning Software Shaun Snapp,2012-08-01 This books explains the emerging technology of inventory optimization and multi-echelon (MEIO) supply planning. It takes a complex subject and effectively communicates what MEIO is about in plain English terms. This is the only book currently available that describes MEIO for practitioners, rather for mathematicians or academics. The book describes with text and graphics how inventory optimization allows the entire supply plan to be controlled with service levels, and how multi echelon technology answers the question of where to locate inventory in the supply network. This is the only book on inventory optimization and multi echelon planning which compares how different best of breed vendors apply MEIO technology to their products. It also explains why this technology is so important for supply planning and why companies should be actively investigating this method. The book moves smoothly between concepts to screen shots and descriptions of how the screens are configured and used. This provides the reader with some of the most intriguing areas of functionality within a variety of applications.

INVENTORY MANAGEMENT Prabhu TL, Inventory management aids businesses in determining which goods to order and when to order it. It keeps track of merchandise from purchase to sale. The practise monitors and reacts to trends to guarantee that there is always enough stock to satisfy client orders and that shortages are detected early. Inventory becomes revenue if it is sold. Inventory ties up cash before it sells, despite the fact that it is reported as an asset on the balance sheet. As a result, having too much inventory costs money and lowers cash flow. Inventory turnover is one indicator of good inventory management.

Inventory turnover is an accounting metric that shows how frequently stock is sold over time. A company does not want to have more inventory than it can sell. Deadstock, or unsold inventory, can result from low inventory turnover. What Is the Importance of Inventory Management? Inventory management is critical to a business's success since it ensures that there is never too much or too little goods on hand, reducing the danger of stockouts and erroneous records. Inventory tracking is required by the Securities and Exchange Commission (SEC) and the Sarbanes-Oxley (SOX) Act for public corporations. To demonstrate compliance, businesses must document their management practises. Inventory Management's Advantages Inventory management has two key advantages: it assures that you can fulfil incoming or open orders and it increases earnings. Inventory control also entails: Saves Money: Knowing stock trends allows you to know how much and where you have anything in stock, allowing you to make better use of what you have. This also allows you to hold less stock at each location (store, warehouse), as you can fulfil orders from anywhere – all of this lowers inventory costs and reduces the quantity of product that goes unsold before it becomes obsolete. Improves Cash Flow: Proper inventory management allows you to spend money on inventory that sells, allowing cash to flow freely throughout the company. Customers are satisfied: ensuring that customers obtain the things they desire without having to wait is an important part of building loyal customers.

Swiss National Forest Inventory - Methods and Models of the Fourth Assessment Christoph Fischer,Berthold Traub,2019-09-24 The Swiss National Forest Inventory (NFI) is a forest survey on national level which started in 1982 and has already reached its 5th survey cycle (NFI5). It can be characterized as a multisource and multipurpose inventory where information is mainly collected from terrestrial field surveys using permanent sample plots. In addition, data from aerial photography, GIS and forest service questionnaires are also included. The NFI's main objective is to provide statistically reliable and sound figures to stakeholders such as politicians, researchers, ecologists, forest service, timber industry, national and international organizations as well as to international projects such as the Forest Resources Assessment of the United Nations. For Switzerland, NFI results are typically reported on national and regional level. State of the art methods are applied in all fields of data collection which have been proven to be of international interest and have even served as a basis for other European NFIs. The presented methods are applicable to any sample based forest inventory around the globe. In 2001 the Swiss NFI published its methods for the first time. Since then, many methodological changes and improvements have been introduced. This book describes the complete set of methods and revisions since NFI2. It covers various topics ranging from inventory design and statistics to remote sensing, field survey methods and modelling. It also describes data quality concepts and the software framework used for data storage, statistical analysis and result presentation.

Software Licenses - Dod's Plan to Collect Inventory Data Meets Statutory Requirements U.s. Government Accountability Office,2017-07-26 DOD plans to spend at least \$31 billion on information technology products and services in fiscal year 2014, including software licenses. Further, DOD engages in hundreds of licensing agreements annually. Effective management of software licenses can help organizations avoid purchasing too many licenses that result in unused software and/or too few licenses that result in noncompliance with license terms, which can lead to additional fees. To help DOD effectively manage its software licenses, section 937 of the National Defense Authorization Act for Fiscal Year 2013 mandated that the department issue a plan for developing a DOD-wide inventory of selected software licenses. The accompanying Senate report mandated that GAO review the plan. In response to the Act, DOD issued the plan in July 2013. GAO's objective was to determine whether DOD's software license inventory plan met four requirements that were specified in the act. To do so, GAO collected and analyzed key supporting materials, such as DOD's software license spend analysis, data collection instrument, and guidance provided to DOD components. GAO also interviewed officials with knowledge of the plan.
