Codeswitching as an Index and Construct of Sociopolitical Identity Eve A. Kheir, 2023-02-27 This book presents an empirically based examination of language patterns found among the Israeli Druze community, which is profiled against that of the Arabs in Israel. The results document the emergence of a mixed language previously undescribed and provides a socio-political analysis. This study intends thus to make a contribution to the debate on mixed languages, introducing a model that facilitates the analysis of the link between codeswitching and sociopolitical identity. Special attention is paid to the assessment of language and identity issues of Golan Heights Druze and Israeli Druze, taking into account two major political debates within these communities, regarding the Israeli Nation-state Law and the so-called 'Syrian-Israeli secret Golan deal' speculation.

Risk, Reliability and Safety: Innovating Theory and Practice Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25 The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk. From complex infrastructures to consumer durables, from engineering systems and technologies used in transportation, health, energy, chemical, oil, gas, aerospace, maritime, defence and other sectors, the management of risk during design, manufacture, operation and decommissioning is vital. Methods and models to support risk-informed decision-making are well established but are continually challenged by technology innovations, increasing interdependencies, and changes in societal expectations. *Risk, Reliability and Safety* contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference (ESREL 2016), held at the University of Strathclyde in Glasgow, Scotland (25–29 September 2016). Authors include scientists, academics, practitioners, regulators and other key individuals with expertise and experience relevant to specific areas. Papers include domain specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges, and exposition of concepts, methods and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability modelling, maintenance optimisation, uncertainty analysis, resilience assessment, risk and crisis management.

The Munda Verb Gregory D. S. Anderson, 2011-05-12 The Munda Verb is a unique book on the typology of the verb in the Munda language family, and the first of its kind on any language family of the Indian subcontinent. The author painstakingly works out nearly all the details of the morphology of the verb in each modern Munda language and offers a description of the typology of the Munda verbal systems both individually and collectively. The author uses a large amount of data from modern Munda languages, as well as an extensive cross-linguistic corpus offering comparisons from genetically unrelated languages such as Fox, Amele, Kinyarwanda, Luyia, Takelma, Tonkawa, Burushaski, or Tangut where relevant. Points of note include the unusual incorporation system of South Munda Sora and the elaborate and complex system of verb agreement attested in the Kherwarian Munda languages. Further, the author discusses models for a Proto-Munda verbal system and problems in its reconstruction at various points throughout. This book is of great interest to specialists working on the Munda languages, South Asian linguistics, language typology, historical linguistics and to scholars of both morphology as well as syntax.

Subcellular Biochemistry and Molecular Biology Dennis E. Buetow, 2012-12-02 The Biology of Euglena, Volume IV: Subcellular Biochemistry and Molecular Biology focuses on the subcellular biochemistry and molecular biology of eukaryotic microorganisms that belong to the genus *Euglena*, including *Euglena gracilis*. It investigates enzymes and their functional location in *Euglena* cells, along with subcellular particles, the nucleus, the mitochondria, the chloroplast protein synthesis and chloroplast DNA, and the microbodies and lysosomes of *Euglena*. Organized into eight chapters, this volume begins with an overview of techniques in determining the location of enzymes and in isolating organelles in *Euglena*. It then proceeds with a discussion of the nucleus, its ultrastructure and macromolecules, and chromatin organization. The next chapters examine the morphology and ultrastructure of mitochondria, the morphology and biogenesis of microbodies and lysosomes, the nuclear-cytoplasmic interaction, and the structure and physicochemical properties of chloroplast DNA. The last two chapters consider the ribosomal RNAs of *Euglena* and the organization and activities of cytoplasmic, mitochondrial, and chloroplast ribosomes and polyribosomes, along with its polyadenylated and messenger RNA. This book will be of interest to biochemists, molecular biologists, botanists, and plant geneticists.

Alignment and Alignment Change in the Indo-European Family Eystein Dahl, 2022-08-26 This volume brings together work from leading specialists in Indo-European languages to explore the macro- and micro-dynamic factors that contribute to variation and change in alignment and argument realization. Alignment is taken to include both basic alignment patterns associated with major construction types, as well as various valency-decreasing constructions such as passives, anticausatives, and impersonals. The chapters explore synchronic and diachronic aspects of alignment morphosyntax based on data from Anatolian, Indo-Iranian, Greek, Italic, Armenian, and Slavic. All have a strong empirical focus, drawing on both qualitative and quantitative methods, and range from broad comparative studies to detailed investigations of specific constructions in individual languages. The book is one of very few studies to examine variation and change in alignment typology across languages in a single family. It contributes to a greater understanding of the roles played by analogy/extension, reanalysis, and areal factors in alignment change, and demonstrates the extent of variation found in the morphosyntax of argument realization in genetically-related languages.

Electric Power Transformer Engineering James H. Harlow, 2003-08-15 Covering the fundamental theory of electric power transformers, this book provides the background required to understand the basic operation of electromagnetic induction as applied to transformers. The book is divided into three fundamental groupings: one stand-alone chapter is devoted to Theory and Principles, nine chapters individually treat major

The Making of a Mixed Language Maarten Mous, 2003-12-19 The Mbugu (or Ma'á) language (Tanzania) is one of the few genuine mixed languages, reputedly combining Bantu grammar with Cushitic vocabulary. In fact the people speak two languages: one mixed and one closely related to the Bantu language Pare. This book is the first comprehensive description of these languages. It shows that these two languages share one grammar while their lexicon is parallel. In the distant past the people shifted from a Cushitic to a Bantu language and in the process rebuilt a language of their own that expresses their separate ethnic identity in a Bantu environment. This linguistic history is explained in the context of the intricate history of the people. The discussion of the processes that were involved in the formation of Ma'a/Mbugu is extremely relevant for both creole studies and for contact linguistics in general.

A grammar of Yakkha Diana Schackow, 2015-10-12 This grammar provides the first comprehensive grammatical description of Yakkha, a Sino-Tibetan language of the Kiranti branch. Yakkha is spoken by about 14,000 speakers in eastern Nepal, in the Sankhuwa Sabha and Dhankuta districts. The grammar is based on original fieldwork in the Yakkha community. Its primary source of data is a corpus of 13,000 clauses from narratives and naturally-occurring social interaction which the author recorded and transcribed between 2009 and 2012. Corpus analyses were complemented by targeted elicitation. The grammar is written in a functional-typological framework. It focusses on morphosyntactic and semantic issues, as these present highly complex and comparatively under-researched fields in Kiranti languages. The sequence of the chapters follows the well-established order of phonological, morphological, syntactic and discourse-structural descriptions. These are supplemented by a historical and sociolinguistic introduction as well as an analysis of the complex kinship terminology. Topics such as verbal person marking, argument structure, transitivity, complex predication, grammatical relations, clause linkage, nominalization, and the topography-based orientation system have received in-depth treatment. Wherever possible, the structures found were explained in a historical-comparative perspective in order to shed more light on how their particular properties have emerged.

Case, Word Order and Prominence Monique Lamers, Peter de Swart, 2011-10-20 Language users have access to several sources of information during the build up of a meaningful construction. These include grammatical rules, situational knowledge, and general world knowledge. A central role in this process is played by the argument structure of verbs, which establishes the syntactic and semantic relationships between arguments. This book provides an overview of recent psycholinguistic and theoretical investigations on the interplay between structural syntactic relations and role semantics. The focus herein lies on the interaction of case marking and word order with semantic prominence features, such as animacy and definiteness. The interaction of these different sorts of information is addressed from theoretical, time-insensitive, and incremental perspectives, or a combination of these. Taking a broad cross-linguistic perspective, this book bridges the gap between theoretical and psycholinguistic approaches to argument structure.

Developing Mathematical Proficiency for Elementary Instruction Yeping Li, Roger E. Howe, W. James Lewis, James J. Madden, 2021-04-23 The need to improve the mathematical proficiency of elementary teachers is well recognized, and it has long been of interest to educators and researchers in the U.S. and many other countries. But the specific proficiencies that elementary teachers need and the process of developing and improving them remain only partially conceptualized and not well validated empirically. To improve this situation, national workshops were organized at Texas A&M University to generate focused discussions about this important topic, with participation of mathematicians, mathematics educators and teachers. Developing Mathematical Proficiency for Elementary Instruction is a collection of articles that grew out of those exciting cross-disciplinary exchanges. Developing Mathematical Proficiency for Elementary Instruction is organized to probe the specifics of mathematical proficiency that are important to elementary teachers during two separate but inter-connected professional stages: as pre-service teachers in a preparation program, and as in-service teachers teaching mathematics in elementary classrooms. From this rich and inspiring collection, readers may better understand, and possibly rethink, their own practices and research in empowering elementary teachers mathematically and pedagogically, as educators or researchers.

Current State of Postural Research - Moving Beyond the Balance Platform Emily Keshner, Joyce Fung, Tanvi Bhatt, 2024-02-05 The concept of posture control has morphed over the past century from a reflex, hierarchically controlled, innate behavior to a complex and adaptable motor act highly influenced by cognitive processes as well as confidence and attentiveness of the performer. In addition, multisensory control of posture has been recognized as a process of fusion and integration rather than summation and inhibition. Advances in computational modeling and imaging have revealed that higher cortical centers are involved in production of what were previously believed to be stereotypical, triggered reactions. Emerging evidence now supports the idea that postural behaviors are regulated by distributed control in the neuraxis and shaped by dynamic interactions of sensorimotor processes in a task- and context-dependent manner.

Micro-change and Macro-change in Diachronic Syntax Eric Mathieu,Robert Truswell,2017 Annotation This volume addresses syntactic change at the macro and the micro level, and explores how these different levels of change are related. It includes numerous case studies of changes in syntactic constructions including relative clauses, verb second, and negation, in a range of languages.

The Oxford Guide to Australian Languages Claire Bowern,2023-06-06 The Oxford Guide to Australian Languages is a wide-ranging reference work that explores the more than 550 traditional and new Indigenous languages of Australia. Australian languages have long played an important role in diachronic and synchronic linguistics and are a vital testing ground for linguistic theory. Until now, however, there has been no comprehensive and accessible guide to the their vast linguistic diversity. This volume fills that gap, bringing together leading scholars and junior researchers to provide an up-to-date guide to all aspects of the languages of Australia. The chapters in the book explore typology, documentation, and classification; linguistic structures from phonology to pragmatics and discourse; sociolinguistics and language variation; and language in the community. The final part offers grammatical sketches of a selection of languages, sub-groups, and families. At a time when the number of living Australian languages is significantly reduced even compared to twenty year ago, this volume establishes priorities for future linguistic research and contributes to the language expansion and revitalization efforts that are underway.

Auxiliary Verb Constructions in Altai-Sayan Turkic Gregory D. S. Anderson,2004 Auxiliary Verb Constructions in Altai-Sayan Turkic is a comprehensive survey of the rich system of auxiliary verbs found in the Altai-Sayan Turkic languages spoken in south central Siberia. This includes a discussion of the range of patterns of inflection in the auxiliary verb constructions, the development of various verbal affixes that were originally auxiliary verbs, and the wide array of functions that auxiliary verb constructions have in this group of languages. These latter include the usual tense, mood, and aspect categories that are commonly associated with auxiliary verbs across the languages of the world. In addition, auxiliary verb constructions have several less typical functions in the Altai-Sayan Turkic languages. These include both unusual modal or aspectual categories like unexpected action or 'pretend to' forms and categories relating to so-called verbal 'orientation' or 'direction' and 'version'. In the former instance, the forms mark motion toward or away from the subject, topic, or discourse locus, while the latter formations indicate whether a subject or a nonsubject is the participant primarily affected by the action of the verb.
