STELLARIUM USER GD Matthew Gates,Georg Zotti,Alexander Wolf,2016-10-04 Stellarium is a software project that allows people to use their home computer as a virtual planetarium. It calculates the positions of the Sun and Moon, planets and stars, and draws how the sky would look to an observer depending on their location and the time. It can also draw the constellations and simulate astronomical phenomena such as meteor showers or comets, and solar or lunar eclipses.

Stellarium 0.16.1 User Guide Georg Zotti,Alexander Wolf,Matthew Gates,2017-09-22 Stellarium is a software project that allows people to use their home computer as a virtual planetarium. It calculates the positions of the Sun and Moon, planets and stars, and draws how the sky would look to an observer depending on their location and the time. It can also draw the constellations and simulate astronomical phenomena such as meteor showers or comets, and solar or lunar eclipses. Stellarium may be used as an educational tool for teaching about the night sky, as an observational aid for amateur astronomers wishing to plan a night's observing or even drive their telescopes to observing targets, or simply as a curiosity (it's fun). Because of the high quality of the graphics that Stellarium produces, it is used in some real planetarium projector products and museum projection setups. Some amateur astronomy groups use it to create sky maps for describing regions of the sky in articles for newsletters and magazines, and the exchangeable sky cultures feature invites its use in the field of Cultural Astronomy research and outreach. Color images and text have been converted to grayscale. A link to a free copy of this book as a PDF may be found on stellarium.org.

Stellarium (Origins) Fabricio Simoes,2016-02-03 One day, traveling through space using wormholes became possible. Come along for the ride and experience the challenges faced by the first manned mission beyond the limits of our solar system. In 2015, scientists observe a gravitational disturbance in the Draco Dwarf Galaxy, 250,000 light years away from Earth. A decade later, with the revelation of the technology that allows humans to create wormholes (shortcuts in space) by manipulating gravity, NASA launches the Stellarium Space Program, whose twelfth mission sends the first astronauts to another galaxy. However, intergalactic space travel is new to humankind; we are not entirely familiar with the topology of the universe, nor with the consequences of bending space-time, which leads this mission to take some incredibly unexpected turns. Stuck in a space-time labyrinth, join the journey faced by the first humans to travel through wormholes; and go along with them as they make discoveries that may even explain the origins of our existence.

Popular Science ,1941-04 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Star Code Chris Ward,2010 For thousands of years humans looked to the stars for navigation, deities, personality insights, predictions and omens about the future. What can we learn from these heavenly bodies? The Bible says that the Lord placed them there as faithful witnesses to mark the seasons, the days, and the times. The Bible also tells of Wise Men from the east that followed a star to Bethlehem to find a king. What other events might be revealed by the movement of the stars and planets? Is there more hidden in the stars? Is there a Star Code?

Observation Exercises in Astronomy Lauren Jones,2011 Observation Exercises in Astronomy is a lab manual containing a series of astronomy exercises that integrates technology from planetarium software such as SkyGazer, StarryNight Pro, Stellarium, and WorldWide Telescope. Each exercise is designed to engage the student in a different aspect of the scientific process.

Data Sketches Nadieh Bremer,Shirley Wu,2021-02-09 In Data Sketches, Nadieh Bremer and Shirley Wu document the deeply creative process behind 24 unique data visualization projects, and they combine this with powerful technical insights which reveal the mindset behind coding creatively. Exploring 12 different themes – from the Olympics to Presidents & Royals and from Movies to Myths & Legends – each pair of visualizations explores different technologies and forms, blurring the boundary between visualization as an exploratory tool and an artform in its own right. This beautiful book provides an intimate, behind-the-scenes account of all 24 projects and shares the authors' personal notes and drafts every step of the way. The book features: Detailed information on data gathering, sketching, and coding data visualizations for the web, with screenshots of works-in-progress and reproductions from the authors' notebooks Never-before-published technical write-ups, with beginner-friendly explanations of core data visualization concepts Practical lessons based on the data and design challenges overcome during each project Full-color pages, showcasing all 24 final data visualizations This book is perfect for anyone interested or working in data visualization and information design, and especially those who want to take their work to the next level and are inspired by unique and compelling data-driven storytelling.

Harmony and Symmetry. Celestial regularities shaping human culture. Gudrun Wolfschmidt,2020-12-29 For the SEAC conference in Graz (2018) and for the Proceedings the motto Harmony and symmetry – celestial regularities shaping human culture was chosen. There were at least two strong reasons for this motto: First, the connection between astronomy and human culture has an extremely long tradition, and one of its absolute high points is the astronomer Johannes Kepler, who spent his entire life searching for the relationship between the movement of heavenly lights and ideas about harmonious structures and regular bodies. Kepler started his scientific career and authored his first book, the *Mysterium cosmographicum*, in Graz. Kepler argued in his first publication for the twelve-fold partition of the zodiac with arguments derived from the monochord, anticipating the procedure he developed in his *Harmonices mundi*. Five contributions deal with Kepler, including the harmony in musical theory. The second reason was the Eggenberg Castle. This palace, built for the nobleman Hans Ulrich von Eggenberg (1568-1634), is a remarkable piece of symmetry and harmony and an outstanding example of a strong connection between astronomy and culture. Seven contributions have the topic astronomy, astrology and architecture with the emphasis on astronomical orientation, symmetry and harmony in the Middle Ages and Renaissance. The Proceedings with ten chapters and 44 contributions range besides the mentioned Middle Ages and beyond and Johannes Kepler from Prehistoric Times, Bronze and Iron Age, Mythology and Ethnoastronomy, Babylonian Astronomy, Greek and Roman Astronomy, Meso- and South America, Middle East and Eastern Asia and Computational Astronomy. The celestial sphere, regarded as the sky of astronomy, as well as the heaven of divine numina, from Antiquity to Copernicus and Kepler was equated with symmetry, harmony, and beauty. Until today, this has been reflected in the structure of

cultural creations, from architectural objects to musical forms.

Applied and Computational Historical Astronomy. Angewandte und computergestützte historische Astronomie. Gudrun Wolfschmidt, 2021-08-26 'Computational History' derives history from data and nowadays, therefore, relies on the technologies of the digital humanities. 'Computational History of Science' addresses questions of history by evaluating historical data, e.g. for tracing back copying traditions and conclude on transfer and transformation of data and knowledge. The term 'Applied Historical Astronomy', in contrast, tries to address questions of contemporary science by evaluating historical data in comparison with most recent data. This opens new possibilities, e.g. in the search for stellar transients among historical data. In the contribution by Hoffmann & Vogt we will focus on the stellar transients among all the topics mentioned above. Philipp Protte discusses the accuracy of magnitudes and positions in ancient star catalogues, Andreas Schrimpf & Frank Verbunt present an analysis of an early modern star catalogue. Victor Reijs analyses the visibility of celestial objects for naked-eye observers, and Björn Kunzmann showcases some important variable stars in the history of astronomy. Rene Hudec presents astronomical photographic archives as a valuable data source for modern astrophysics. José M. Vaquero discusses the studies on solar observations made during the last four centuries. More technical are the contributions of Georg Zotti on Stellarium and Karsten Markus-Schnabel on data-mining and data-processing technologies. Ido Yavetz & Luca Beisel are developing a digital tool of computational history of science for the simulation of pre-modern astronomical models. Gerd Graßhoff focuses more on the application of computational history with regard to Kepler's Astronomia Nova while Tim Karberg presents an analysis of the astronomical orientation of buildings in the North Sudan.

Visualising Skyscapes Liz Henty, Daniel Brown, 2019-08-19 Above the land and its horizon lies the celestial sphere, that great dome of the sky which governs light and darkness, critical to life itself, yet its influence is often neglected in the archaeological narrative. Visualising Skyscapes captures a growing interest in the emerging field of skyscape archaeology. This powerful and innovative book returns the sky to its rightful place as a central consideration in archaeological thought and can be regarded as a handbook for further research. Bookended by a foreword by archaeologist Gabriel Cooney and an afterword by astronomer Andrew Newsam, its contents have a wide-reaching relevance for the fields of archaeology, anthropology, ethnography, archaeoastronomy, astronomy, heritage and cultural studies. The volume balances six chapters on theory and methodology which elaborate on the history and practice of the field with six other chapters focused on case studies from around the world. Visualising Skyscapes captures the growing interest in the multidisciplinary study of skylscapes and will be of interest to academics, students and the general public, as well as having international appeal. It is topical, timely and relevant to current debates and will hopefully stimulate further interest in this exciting and relatively new area of investigation. The contributions showcase the work of distinguished academics in the field and the chapters are all enhanced by numerous photographs and images.

Aristarchos of Samos the Polymath Alberto G. Gomez, 2014-11-26 Of all the giants on whose shoulders we stand, Aristarchos of Samos, the ancient Greek all-rounder, has proved to be especially tall: no one else (not even Einstein, to mention an iconic figure) has ever discovered anything (of like importance) that took so long to dawn on the rest of humanity. His achievement was extraordinary: with nothing more than the naked eye and the mind of a genius, he got to know the Sun's distance better than anyone else before, and he put the Earth in motion around the Sun for the first time in human awareness. The present book examines what history has spared of him and invites the reader to relive astronomy's finest hour.

The Oxford Handbook of Light in Archaeology Costas Papadopoulos,Holley Moyes,2021-12-09 Light plays a crucial role in mediating relationships between people, things, and spaces, yet lightscapes have been largely neglected in archaeology study. This volume offers a full consideration of light in archaeology and beyond, exploring diverse aspects of illumination in different spatial and temporal contexts from prehistory to the present.

De Visione Stellarum Dan Burton,2007 In this critical edition of Nicole Oresme's 14th-century treatise on atmospheric refraction, Oresme uses optics and infinitesimals to help solve this vexing problem of astronomy, proposing that light travels along a curve through the atmosphere, centuries before Hooke and Newton.
