Stockpiling Not Hoarding Nancy Sherman,2015-06-05 What if the store you needed to be open at the time you needed something, that was in your basement? You wouldn't have to get the keys, go out to the car, and hope the store is still open. Have you had that experience? I have a solution for that problem: Stockpile. And when your stockpile is available 24/7 there will be no need for emergency runs to the store for products. This is not about hoarding; it is about stockpiling there is a different.

*The Nation's Medical Countermeasure Stockpile* National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Health Sciences Policy,2016-11-24 Large catastrophic events, or rare acute events, may cause situations in which a local jurisdiction's medicines and medical supplies are not sufficient to provide care to the population it serves. In these cases of natural or engineered disasters, such as a terrorist attack, influenza pandemic, or earthquake, state or local authorities can request that the federal government provide assets from the Strategic National Stockpile to augment the state and local jurisdictions' resources. The Centers for Disease Control and Prevention's (CDC's) Strategic National Stockpile (SNS) is the nation's repository of antibiotics, chemical antidotes, antitoxins, vaccines, antiviral drugs, and other medical materiel designed to supplement and resupply state and local public health agencies in the event of an emergency. The materiel is intended to support national health security and is managed by the Office of Public Health Preparedness and Response's (OPHPR's) Division of Strategic National Stockpile (DSNS). The stated mission of the SNS is to prepare and support partners and provide the right resources at the right time to secure the nation's health. The National Academies of Sciences, Engineering, and Medicine organized a two-day public workshop to explore opportunities to improve the efficiency, effectiveness, and

sustainable methods used by the CDC's SNS to distribute medical countermeasures and other supplies during disasters and other public health emergencies, especially those which result in disruption of physical infrastructure such as the electrical grid, central roadways, bridges, and tunnels within the impacted community. Participants explored relevant distribution lessons learned from other federal agency stockpiles and the private sector as well as opportunities to develop public-private collaborations in the purchase, warehousing, management, and distribution of medical countermeasures. This report summarizes the presentations and discussions from the workshop.

Jerry Miller highlights the strategies, targeting and attack plans, and arms control measures associated with the bomb. He addresses the role of the military in establishing requirements and the role of the scientists in meeting those requirements and identifies the weapons' strengths and weaknesses and their significance for the future. A final chapter reviews threat scenarios and suggests actions to bring the nuclear force into line.
