Andrew S. Barnes

*Tamp* Denton Loving, 2023-04-04 East Tennessee poet Denton Loving's second collection centers on the bond that endures between father and son, even after death. In plainspoken poetry that is often narrative in form, the writer's personal experiences living on an inherited cattle farm and tending to an aging orchard are detailed. Loving explores and celebrates the physical and psychological landscapes of his native Appalachia--its mountains and valleys, its flora and fauna--with language that is lyrical and bursting with sudden shocks of emotional power. These are poems that serve as witness to the natural world, blurred with history and mythology to examine the eternal father-son paradigm. Readers will be reminded why Ron Rash has said that Denton Loving has the talent to convey what he has seen that we too might see, and feel, and know deeply.

*The Physics of the Manhattan Project* Bruce Cameron Reed, 2021-01-02 The development of nuclear weapons during the Manhattan Project is one of the most significant scientific events of the twentieth century. This revised and updated 4th edition explores the challenges that faced the scientists and engineers of the Manhattan Project. It gives a clear introduction to fission weapons at the level of an upper-year undergraduate physics student by examining the details of nuclear reactions, their energy release, analytic and numerical models of the fission process, how critical masses can be estimated, how fissile materials are produced, and what factors complicate bomb design. An extensive list of references and a number of exercises for self-study are included. Revisions to this fourth edition include many upgrades and new sections. Improvements are made to, among other things, the analysis of the physics of the fission barrier, the time-dependent simulation of the explosion of a nuclear weapon, and the discussion of tamped bomb cores. New sections cover, for example, composite bomb cores, approximate methods for various of the calculations presented, and the physics of the polonium-beryllium neutron initiators used to trigger the bombs. The author delivers in this book an unparalleled, clear and comprehensive treatment of the physics behind the Manhattan project.

Ownning Russia Andrew S. Barnes, 2018-07-05 During and after the breakdown of the Soviet Union, a wide range of competitors fought to build new political and economic empires by wresting control over resources from the state and from each other. In the only book to examine the evolution of Russian property ownership in both industry and agriculture, Andrew Barnes uses interviews, archival research, and firsthand observation to document how a new generation of capitalists gained control over key pieces of the Russian economy by acquiring debt-ridden factories and farms once owned by the state. He argues that although the Russian government made policies that affected how actors battled one another, it could never rein in the most destructive aspects of the struggle for property. Barnes shows that dividing the spoils of the Soviet economy involved far more than the experiment with voucher privatization or the scandalous behavior of a few Moscow-based oligarchs. In Russia, the control of property yielded benefits beyond mere profits, and these high stakes fueled an intense, enduring, and profound conflict over real assets. This fierce competition empowered the Russian executive branch at the expense of the legislature, dramatically strengthened managers in relation to workers, created a broad array of business conglomerates, and fundamentally shaped regional politics, not only blurring the line between government and business but often erasing it.

**AASHTO Transportation Asset Management Guide** American Association of State Highway and Transportation Officials,2011 Aims to encourage transportation agencies to address strategic questions as they confront the task of managing the surface transportation system. Drawn from both national and international knowledge and experience, it provides guidance to State Department of Transportation (DOT) decision makers, as well as county and municipal transportation agencies, to assist them in realizing the most from financial resources now and into the future, preserving highway assets, and providing the service expected by customers. Divided into two parts, Part one focuses on leadership and goal and objective setting, while Part two is more technically oriented. Appendices include work sheets and case studies.
