User's Epistle on Text Chat Tool Acquisition ,2006 Just as leaders of the world wars of the 20th century exploited advances in the industrial revolution, military leaders today exploit the information revolution. Despite the hindrance of current military command, control and communications (C3) to adhere to a classic Napoleonic hierarchy, information revolution values strategically enable principles like Net-Centric Warfare and challenge the status quo. With a revolutionary technology like text chat, a monopoly of naysayers produce a litany of obstacles that predict inevitable failure and a monopoly of ideologues insist that only the purest implementation can succeed. The rest of us plug away -- testing, innovating, and using the new technology any way in which it works better than the old way. It is often said in the C3 world that amateurs talk tools while professionals discuss capabilities. This paper provides an acquisition philosophy to encourage Text Chat as a universally viable military capability. As the information age progressed, individuals came to regard Text Chat as a normal mode of communication. Chat Rooms enable members of a workgroup to visually converse and can include the ability to record that conversation.

Peer Interaction and Second Language Learning Masatoshi Sato,Susan Ballinger,2016-03-10 This volume represents the first collection of empirical studies focusing on peer interaction for L2 learning. These studies aim to unveil the impact of mediating variables such as task type, mode of interaction, and social relationships on learners' interactional behaviors and language development in this unique and pedagogically powerful learning context. To examine these issues, contributors employed quantitative, qualitative, and mixed-methods designs as well as cognitive, social, and sociocognitive theoretical frameworks. The majority of the studies are classroom based and were conducted in a rich array of settings covering five continents and encompassing a wide range of learner L1s and target languages. These settings include second and foreign language classrooms from primary to university level, content-based programs, online contexts, and after-school programs. To span the divide between research and practice, each study includes a section suggesting pedagogical implications.

The Internet and Social Change Carla G. Surratt,2017-07-06 Starting with only four hosts in 1969, the Internet consisted of more than 56 million hosts by the end of 1999. In 1993, the World Wide Web was only 130 sites strong; six years later it boasted more than seven million sites. Despite this explosive growth of the Internet and computer technology, little is known about the social implications of computer mediated communications. In this work, the author uses social science theory to evaluate the social transformations taking place today. She asks whether human beings use the Internet to change basic social institutions, and if so, whether these changes are a matter of degree only or represent an overthrow of previous modes of organizing. The work examines the rise of the Internet as the logical extension of the Industrial Revolution and urbanization consistent with the basic tenets of modernity, and offers a new conceptual framework through which to understand the Internet.

Building Communities of Engaged Readers Teresa Cremin,Marilyn Mottram,Fiona M. Collins,Sacha Powell,Kimberly Safford,2014-06-20 Reading for pleasure urgently requires a higher profile to raise attainment and increase children's engagement as self-motivated and socially interactive readers. Building Communities of Engaged Readers highlights the concept of 'Reading Teachers' who are not only knowledgeable about texts for children, but are aware of their own reading identities and prepared to share their enthusiasm and understanding of what being a reader means. Sharing the processes of reading with young readers is an innovative approach to developing new generations of readers. Examining the interplay between the 'will and the skill' to read, the book distinctively details a reading for pleasure pedagogy and demonstrates that reader engagement is strongly influenced by relationships between children, teachers, families and communities. Importantly it provides compelling evidence that reciprocal reading communities in school encompass: a shared concept of what it means to be a reader in the 21st century; considerable teacher and child knowledge of children's literature and other texts; pedagogic practices which acknowledge and develop diverse reader identities;

spontaneous ‘inside-text talk’ on the part of all members; a shift in the focus of control and new social spaces that encourage choice and children’s rights as readers. Written by experts in the literacy field and illustrated throughout with examples from the project schools, it is essential reading for all those concerned with improving young people’s enjoyment of and attainment in reading.

Internet Reference Support for Distance Learners Rita Pellen,William Miller,2013-12-19 Make separate library services for distance learners a thing of the past Internet Reference Support for Distance Learners takes a comprehensive look at efforts by librarians and information specialists to provide distance learners with effective services that match those already available on campus. With the development of the World Wide Web and the evolution of Web-based services, reference librarians are adding a human element to the virtual library, blurring the difference between distance learners and traditional users. This unique book examines how they deal with a wide range of related topics, including standards and guidelines, copyright issues, streaming media, and chat and digital references, and presents a historical overview of how reference and instructional services have been delivered to distance users—before and after the creation of the Internet. Internet Reference Support for Distance Learners reveals that librarians do not make a sharp distinction between reference and instruction within the context of distance learning, and that there is no clear boundary between “true” distance learners and more traditional students who might use services designed for nontraditional users. Online capabilities have allowed reference librarians to approximate services advocated by published guidelines and standards, including the ACRL Distance Learning Section’s Guidelines for Distance Learning Library Services, to provide a framework for librarians to plan services for off-campus students. Internet Reference Support for Distance Learners provides practical information on: how librarians can “keep IT simple” when designing methods to access reference support why library Web sites are vital sources of communication between the distance learning student and the reference-based instructional component how to set up a university chat service, including software selection, staff training and assessment how to provide students services beyond traditional provision of resources, including advising, enrollment, and payment of fees how to create an online assistance site that incorporates online versions of traditional print handouts, FAQs, subject guides, course-specific guides, learning modules, and instructional videos in one central location how to work with faculty to create online support for students in Blackboard courses the pros and cons of using open-source software how to create an online library assistance site how to create online information literacy course to teach independent research skills to remote students how to avoid copyright infringement and how to educate library personnel about copyright law how to use Camtasia Studio, a screen capture program to create audio and video for online presentations Internet Reference Support for Distance Learners is an invaluable resource for librarians working in academic, school, special, and public settings, and for library science faculty and students.

Researching Interpretive Talk Around Literary Narrative Texts John Gordon,2020-08-25 Drawing on a multidisciplinary approach integrating insights from conversation analysis, narrative analysis, and narratology, this book theorizes teaching around narrative prose in each level of education, with a focus on a new framework of Pedagogic Literary Narration which emphasizes the practice of shared novel reading and the importance of the role of the teacher in mediating this practice. // With insights taken from a comprehensive set of transcripts taken from actual classrooms, the volume focuses on the convention in native-tongue literary study in which teachers and students read a novel shared over lessons, combining periods of reading aloud with those of questioning and discussion. In so doing, Gordon seeks to extend existing methodologies from literary and social science research toward informing teaching practice in literary pedagogy and address the need for a theorization of literary pedagogy which considers the interrelationship between text-in-print and text-through-talk. Transcripts are supported with comprehensive analyses to help further explicate the research methodology and provide guidance on implementing it in the classroom. // This book is a valuable resource for scholars in language and education, literary studies, narrative inquiry, and education research.

Oxford Handbook of Internet Psychology Adam Joinson,Katelyn McKenna,Tom Postmes,Ulf-Dietrich Reips,2009-02-12 Over one billion people use the Internet globally. Psychologists are beginning to understand what people do online, and the impact being online has on behaviour. It's making us re-think many of our existing assumptions about what it means to be a social being. For instance, if we can talk, flirt, meet people and fall in love online, this challenges many of psychology's theories that intimacy or understanding requires physical co-presence. The Oxford Handbook of Internet Psychology brings together many of the leading researchers in what can be termed 'Internet Psychology'. Though a very new area of research, it is growing at a phenomenal pace. In addition to well-studied areas of investigation, such as social identity theory, computer-mediated communication and virtual communities, the volume also includes chapters on topics as diverse as deception and misrepresentation, attitude change and persuasion online, Internet addiction, online relationships, privacy and trust, health and leisure use of the Internet, and the nature of interactivity. With over 30 chapters written by experts in the field, the range and depth of coverage is unequalled, and serves to define this emerging area of research. Uniquely, this content is supported by an entire section covering the use of the Internet as a research tool, including qualitative and quantitative methods, online survey design, personality testing, ethics, and technological and design issues. While it is likely to be a popular research resource to be 'dipped into', as a whole volume it is coherent and compelling enough to act as a single text book. The Oxford Handbook of Internet Psychology is the definitive text on this burgeoning field. It will be an essential resource for anyone interested in the psychological aspects of Internet use, or planning to conduct research using the 'net'.
