Old Timer's Disease Kent C. Griswold, 2007-12-19 Don't leave me here! Rachel sobbed as her son and daughter-in-law wept outside her room, torn by guilt to be abandoning her but at their wits' end. If only they had known. Statistics show that countless people die within weeks of entering a nursing home, but the odds were even worse at Pleasant Acres. The residents of this nursing home were not just concerned about cold soup. Nighttime could send shivers down one's spine.

Nuclear Battery Powered Timers R. L. DesJardin, 1958 During the period from May 1957 to July 1958, four nuclear battery powered timers were fabricated and tested from two basic designs in the time ranges of one second, three-second, and half-hour intervals. The timers were temperature-tested over a range of -65 to +165 F with accuracies over this temperature range from plus or minus 10 percent to plus or minus 15 percent. Each unit has a volume of 10 cubic inches, and the timer can be initiated either by an explosive squib or a pull-out wire. At the end of the timing interval, the timer has an output of 30,000 ergs. The cost of the program was \$000. From the results of this development program, it appears quite feasible to build operable nuclear battery powered timers on a production basis.

Introduction to Network Simulator NS2 Teerawat Issariyakul, Ekram Hossain, 2008-12-10 An Introduction to Network Simulator NS2 is a beginners' guide for network simulator NS2, an open-source discrete event simulator designed mainly for networking research. NS2 has been widely accepted as a reliable simulation tool for computer communication networks both in academia and industry. This book will present two fundamental NS2 concepts: i) how objects (e.g., nodes, links, queues, etc.) are assembled to create a network and ii) how a packet flows from one object to another. Based on these concepts, this book will demonstrate through examples how new modules can be incorporated into NS2. The book will: -Give an overview on simulation and communication networks. -Provide general information (e.g., installation, key features, etc.) about NS2. -Demonstrate how to set up a simple network simulation scenario using Tcl scripting language. -Explain how C++ and OTcl (Object oriented Tcl) are linked, and constitute NS2. -Show how NS2 interprets a Tcl Script and executes it. -Suggest post simulation processing approaches and identify their pros and cons. -Present a number of NS2 extension examples. -Discuss how to incorporate MATLAB into NS2.

Digital System Design - Use of Microcontroller Shenouda Dawoud, R. Peplow, 2022-09-01 Embedded systems are today, widely deployed in just about every piece of machinery from toasters to spacecraft. Embedded system designers face many challenges. They are asked to produce increasingly complex systems using the latest technologies, but these technologies are changing faster than ever. They are asked to produce better quality designs with a shorter time-to-market. They are asked to implement increasingly complex functionality but more importantly to satisfy numerous other constraints. To achieve the current goals of design, the designer must be aware with such design constraints and more importantly, the factors that have a direct effect on them. One of the challenges facing embedded system designers is the selection of the optimum processor for the application in hand; single-purpose, general-purpose or application specific. Microcontrollers are one member of the family of the application specific processors. The book concentrates on the use of microcontroller as the embedded system's processor, and how to use it in many embedded system applications. The book covers both the hardware and software aspects needed to design using microcontroller. The book is ideal for undergraduate students and also the engineers that are working in the field of digital system design. Contents • Preface; • Process design metrics; • A systems approach to digital system design; • Introduction to microcontrollers and microprocessors; • Instructions and Instruction sets; • Machine language and assembly language; • System memory; Timers, counters and watchdog timer; • Interfacing to local devices / peripherals; • Analogue data and the analogue I/O subsystem; • Multiprocessor communications; • Serial Communications and Network-based interfaces.

The X86 Microprocessor, 2e Lyla B.
