Lecture Notes on Motivic Cohomology Carlo Mazza,Vladimir Voevodsky,Charles A. Weibel,2006 The notion of a motive is an elusive one, like its namesake the motif of Cezanne's impressionist method of painting. Its existence was first suggested by Grothendieck in 1964 as the underlying structure behind the myriad cohomology theories in Algebraic Geometry. We now know that there is a triangulated theory of motives, discovered by Vladimir Voevodsky, which suffices for the development of a satisfactory Motivic Cohomology theory. However, the existence of motives themselves remains conjectural. This book provides an account of the triangulated theory of motives. Its purpose is to introduce Motivic Cohomology, to develop its main properties, and finally to relate it to other known invariants of algebraic varieties and rings such as Milnor K-theory, etale cohomology, and Chow groups. The book is divided into lectures, grouped in six parts. The first part presents the definition of Motivic Cohomology, based upon the notion of presheaves with transfers. Some elementary comparison theorems are given in this part. The theory of (etale, Nisnevich, and Zariski) sheaves with transfers is developed in parts two, three, and six, respectively. The theoretical core of the book is the fourth part, presenting the triangulated category of motives. Finally, the comparison with higher Chow groups is developed in part five. The lecture notes format is designed for the book to be read by an advanced graduate student or an expert in a related field. The lectures roughly correspond to one-hour lectures given by Voevodsky during the course he gave at the Institute for Advanced Study in Princeton on this subject in 1999-2000. In addition, many of the original proofs have been simplified and improved so that this book will also be a useful tool for research mathematicians. Barayin Morphosyntax Joseph Lovestrang, 2022-01-21 This volume offers a Lexical-Functional Grammar (LFG) analysis of the morphosyntax of Barayin, a Chadic language spoken by about 6000 people in the Guera region of Chad. The core chapters of the book draw on rich empirical data to provide analyses of the basic clause, noun phrases, verb phrases, and serial verb constructions. The version of LFG adopted here includes two recent innovations: the first is minimal c-structure, which results in simpler phrase structure representations; the second is the assumption that glue semantics accounts for argument selection, rejecting the need for a level of a-structure or for Completeness and Coherence in f-structure. Argument sharing in serial verb constructions can thus be modeled in a connected s-structure. This method of modeling semantic composition in complex predicates is extended to directional and associated motion complex predicates in Choctaw and Wambaya, removing the need to appeal to a special mechanism to unite semantic forms in such constructions.

Microsoft Exchange Server V5.0 Tony Redmond, 1997 Microsoft Exchange Server V5.0: Planning, Design and Implementation incorporates the author's general expertise gained from 15 years working with corporate messaging systems as well as several years specific experience working with large deployments of Exchange Server. The new functionality of Exchange V5.0 is covered, but the real value lies in the pragmatic and practical attitude taken to solving the problems posed by large-scale implementations of any messaging system. Exchange is not magic and little different to other e-mail systems; it is software that needs to be understood to be implemented well. This book helps system designers, implementation teams, and e-mail administrators understand what Exchange V5.0 is good at and where it needs human assistance to succeed. Foreword by Elaine Sharp, Worldwide Messaging Server Product Manager, Microsoft Corporation, March 1992 to October 1996 Fully covers all features of Microsoft Exchange Version 5.0 Practical guide to setting up an Exchange server.
