**Defense Technological Innovation** Bharat Rao,Adam J. Harrison,Bala Mulloth,2020-05-29 Defense Technological Innovation describes the emerging paradigm for innovation at the US Department of Defense, and the consequent impacts on its stakeholders. Leveraging a combination of prior research, archival data, first-person observations and interviews, the authors identify practices and themes characterizing the key trends in defense innovation, describe current organizational approaches and practices, and develop a theoretical framework that elucidates the competencies required to underwrite defense innovation objectives. The findings therein are relevant to any large, technology-driven organization contending with the implications of rapid change in the high-tech landscape.

Economics and Cognitive Science Paul Bourguine,Bernard Walliser,2014-06-28 Economics, dealing with mental processes of decision makers is part of cognitive science; conversely, cognitive science, faced with constraints on information processing, is part of economics. In July 1990, the Cecoia 2 conference was organised in Paris to further explore the connections between the two. The papers presented in this volume illustrate this truly interdisciplinary research intertwining social and cognitive sciences. Three main topics are represented: agent's mental representation when facing complex uncertainty; agent's computational constraints leading to bounded rationality; agent's learning and evolution in an imperfectly known environment.

*MBA Concepts and Frameworks - Tools for Working Professionals* Ohene Aku Kwapong,2005-04 The objective of this book is to provide the fundamental building blocks of an MBA education so working professionals can become more effective in solving business problems.

**Technological Innovation** Laurier Schramm,2017-12-18 The book provides a basic introduction on innovation technology in research and industry, mainly chemical/ technical industry and therefore bridges the gap between academic and corporate markets. The different innovation stages are discussed and tools presented how to successfully apply this knowledge within a research organization.

**The Atlas of Disappearing Places** Christina Conklin,Marina Psaros,2021-07-20 Lit Hub's Most Anticipated of 2021 A beautiful and engaging guide to global warming's impacts around the world "The direction in which our planet is headed isn't a good one, and most of us don't know how to change it. The bad news is that we will experience great loss. The good news is that we already have what we need to build a better future." —from the introduction Our planet is in peril. Seas are rising, oceans are acidifying, ice is melting, coasts are flooding, species are dying, and communities are faltering. Despite these dire circumstances, most of us don't have a clear sense of how the interconnected crises in our ocean are affecting the climate system, food webs, coastal cities, and biodiversity, and which solutions can help us co-create a better future. Through a rich combination of place-based storytelling, clear explanations of climate science and policy, and beautifully rendered maps that use a unique ink-on-dried-seaweed technique, The Atlas of Disappearing Places depicts twenty locations across the globe, from Shanghai and Antarctica to Houston and the Cook Islands. The authors describe four climate change impacts—changing chemistry, warming waters, strengthening storms, and rising seas—using the metaphor of the ocean as a body to draw parallels between natural systems and human systems. Each chapter paints a portrait of an existential threat in a particular place, detailing what will be lost if we do not take bold action now. Weaving together contemporary stories and speculative "future histories" for each place, this work considers both the serious consequences if we continue to pursue business as usual, and what we can do—from government policies to

grassroots activism—to write a different, more hopeful story. A beautiful work of art and an indispensable resource to learn more about the devastating consequences of the climate crisis—as well as possibilities for individual and collective action—The Atlas of Disappearing Places will engage and inspire readers on the most pressing issue of our time. Locations include: Houston, Texas Shanghai, China Hamburg, Germany San Juan, Puerto Rico New York City, New York Pisco, Peru Kisumu, Kenya Kure Atoll, Hawaii Camden, Maine The Cook Islands San Francisco, California Norfolk, Virginia Bến Tre, Vietnam Ise, Japan Gravesend, United Kingdom

**Challenge Social Innovation** Hans-Werner Franz, Josef Hochgerner, Jürgen Howaldt, 2012-12-13 In recent years, social innovation has experienced a steep career. Numerous national governments and large organisations like the OECD, the European Commission and UNESCO have adopted the term. Social innovation basically means that people adopt new social practices in order to meet social needs in a different or more effective way. Prominent examples of the past are the Red Cross and the social welfare state or, at present, the internet 2.0 transforming our communication and cooperation schemes, requiring new management concepts, even empowering social revolutions. The traditional concept of innovation as successful new technological products needs fundamental rethinking in a society marked by knowledge and services, leading to a new and enriched paradigm of innovation. There is multiple evidence that social innovation will become of growing importance not only concerning social integration, equal opportunities and dealing with the greenhouse effects but also with regard to preserving and expanding the innovative capacity of companies and societies. While political authorities stress the social facets of social innovation, this book also encompasses its societal and systemic dimensions, collecting the scientific expertise of renowned experts and scholars from all over the world. Based on the contributions of the first world-wide science convention on social innovation from September 2011 in Vienna, the book provides an overview of scientific approaches to this still relatively new field. Forewords by Agnès HUBERT (Member of the Bureau of European Policy Advisers (BEPA) of the European Commission) and Antonella Noya (Senior Policy Analyst at OECD, manager of the OECD LEED Forum on Social Innovations)

**Green Marketing** Jacquelyn A. Ottman, 2004 Hailed as definitive text on the subject by the American Marketing Association, this groundbreaking book written by the pioneer in green marketing will tell you what you need to know to develop and market products to the growing legions of environmentally conscious consumers.

**Leadership: A Very Short Introduction** Keith Grint, 2010-07-29 The subject of leadership raises many questions: What is it? How does it differ from management and command? Are leaders born or bred? Who are the leaders? Do we actually need leaders? Inevitably, the answers are provocative and partial; leadership is a hugely important topic of debate. There are constant calls for 'greater' or 'stronger' leadership, but what this actually means, how we can evaluate it, and why it's important are not very clear. In this Very Short Introduction Keith Grint prompts the reader to rethink their understanding of what leadership is. He examines the way leadership has evolved from its earliest manifestations in ancient societies, highlighting the beginnings of leadership writings through Plato, Sun Tzu, Machiavelli and others, to consider the role of the social, economic, and political context undermining particular modes of leadership. Exploring the idea that leaders cannot exist without followers, and recognising that we all have diverse experiences and assumptions of leadership, Grint looks at the practice of management, its history, future, and influence on all aspects of society. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

**Innovation and the Growth of Cities** Zoltán J. Ács, 2002 Ács (business, U. of Baltimore), mixing concerns of Schumpeterian economics with issues of geography, argues that the driving motor of regional and economic growth is industrial innovation. He searches through the patent statistics

of the United States searching for evidence of the shifts of knowledge bases between urban areas and compares the shifts with shifts in growth. Among the important facets of this process are the spillover of knowledge from universities to industry and the rate of new product innovation within industry. The empirical material is then used to point the way towards an economic model that combines Krugman's theory of initial conditions for spatial concentration of economic activities with the Romerian theory of endogenous economic growth. *Handbook of Sustainable Engineering* Joanne Kauffman, Kun Mo LEE, 2013-04-30 The efficient utilization of energy, sustainable use of natural resources, and large-scale adoption of sustainable technologies is the key to a sustainable future. The Handbook of Sustainable Engineering provides tools that will help us achieve these goals. Nobel Prize Winner Dr. R.K. Pachauri, Chairman, UN Intergovernmental Panel on Climate Change As global society confronts the challenges of diminishing resources, ecological degradation, and climate change, engineers play a crucial role designing and building technologies and products that fulfil our needs for utility and sustainability. The Handbook of Sustainable Engineering equips readers with the context and the best practices derived from both academic research and practical examples of successful implementations of sustainable technical solutions. The handbook's content revolves around the two themes, new ways of thinking and new business models, including sustainable production, products, service systems and consumption while addressing key assets based on new materials, optimized resource management, and new energy sources. Contributions reflect a focus on state-of-the art insights into employing smart materials, recycling e-waste, water utilization, solar cells, product lifecycles, transportation and reverse manufacturing. Supportive of this, underlying issues such as engineering education, consumer behaviour and the regulatory climate complete the handbook's comprehensive treatment of the problems and most promising solutions.

*Managing Technology in Society* Arie Rip, Thomas J. Misa, Johan Schot, 1995 A fateful conceptual gap separates the policy makers and managers charged with promoting technology, and the risk and technology assessors responsible for controlling it. This hampers the effective use of many new technologies, and prevents the development of others. The strategy of constructive technology assessment (CTA) addresses this gap through facilitating societal learning processes, and proposing a shared responsibility for the promotion and control of new technologies. Combining analysis of both cases and concepts, *Managing Technology in Society* confronts the underdevelopment of innovative potential for achieving goals of wealth, sustainability and safety. Factors that block change, as well as conditions for successful learning are identified in a wide-ranging selection of cases that encompass biotechnology, clean technologies, information and medical technologies. The contributors build on the convergence of recent theories on technical change within economics, sociology and the history of technology, to offer suggestions for CTA action, and so create a new paradigm of managing technology in society.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Succeeding with New Materials: a Comprehensive Guide for Assessing Market Potential Elicia Maine, M. F. Ashby, 2002-12 New materials offer exciting potential for innovation and business success. But with more than 50,000 materials available already, how can you be sure that your development is viable? Commercialising a new material can take 15 years and considerable financial investment. Assessing the risks involved and establishing the project's viability is therefore of paramount importance. This workbook outlines a strategy for increasing the knowledge-base on which investment decisions are taken, and for guiding the research, development and commercialisation required to launch a new material successfully.
