The Savvy Client's Guide to Translation Agencies John Yunker, 2010 Your translation agency is your voice to the world. Select the right agency, and the world will hear you loud and clear. Select the wrong agency, and the world may never know what you have to say-or worse, hear something you never intended to say. This book will help you select the right agency the first time. The book is designed to be used as both a learning tool and a reference. The first two-thirds of the book demystifies the terminology, the workflow, and the major technologies now being used. The last third of the book includes a directory of 44 translation agencies, to help executives begin their search. The book includes: * 10 things you should know about the translation industry* An overview of machine translation and how it is transforming the industry* 10 questions you should ask any prospective translation agency

Computers and Translation Harold Somers, 2003-05-28 This volume is about computers and translation. It is not, however, a Computer Science book, nor does it have much to say about Translation Theory. Rather it is a book for translators and other professional linguists (technical writers, bilingual secretaries, language teachers even), which aims at clarifying, explaining and exemplifying the impact that computers have had and are having on their profession. It is about Machine Translation (MT), but it is also about Computer-Aided (or -Assisted) Translation (CAT), computer-based resources for translators, the past, present and future of translation and the computer. The editor and main contributor, Harold Somers, is Professor of Language Engineering at UMIST (Manchester). With over 25 years' experience in the field both as a researcher and educator, Somers is editor of one of the field's premier journals, and has written extensively on the subject, including the field's most widely quoted textbook on MT, now out of print and somewhat out of date. The current volume aims to provide an accessible yet not overwhelmingly technical book aimed primarily at translators and other users of CAT software.

Translation and Web Searching Vanessa Enríquez Raído, 2013-11-07 The book presents a comprehensive study of various cognitive and affective aspects of web searching for translation problem solving. Research into the use of the web as an external aid of consultation has frequently occupied a secondary position in the investigation of translation processes. The book aims to bridge this gap in the literature. Beginning with a detailed survey of previous studies of these processes, it then focuses on web search behaviors using qualitative and quantitative analysis that presents a multifaceted overview of translation-oriented web searching. The book concludes by addressing the implications for the teaching of and research into translators' web searching skills. With regard to teaching, the book's didactic discussions will make it a valuable tool for both translator trainers and translation students wanting to familiarize themselves with the intricacies of Web searching and to reflect upon the pedagogical implications of the study for acquiring online information literacy in translator training.

Electronic Tools for Translators Frank Austermühl, 2014-05-01 Electronic Tools for Translators offers complete explanations of a wide range of software products, information resources and online services that translators now need to understand and use. Individual chapters run through the origins and nature of the internet, the many ways of searching for information, and translation resources on the web, CD-ROMs as information sources, computer-assisted terminology management, the use and construction of corpora, translation memories, localization tools, and the incorporation of machine translation programmes into the translation process. Austermühl explains all these tools and resources in a clear, step-by-step way, suggesting learning tasks and activities for each chapter and guiding the reader through the jargon. Examples are drawn from English, French, German and Spanish. The book can be used as a text in regular classes on computer-assisted translation, in translation practice classes, as well as for self-learning by professionals wishing to update their skills.

Translation in the Digital Age Michael Cronin, 2013 Translation is living through a period of revolutionary upheaval. The effects of digital technology and the internet on translation are continuous, widespread and profound. From automatic online translation services to the rise of crowdsourced translation and the proliferation of translation Apps for smartphones, the translation revolution is everywhere. The implications for human languages, cultures and society of this revolution are radical and far-reaching. In the Information Age that is the Translation Age, new ways of talking and thinking about translation which take full account of the dramatic changes in the digital sphere are urgently required. Michael Cronin examines the role of translation with regard to the debates around emerging digital technologies and analyses their social, cultural and political consequences, guiding readers through the beginnings of translation's engagement with technology, and through to the key issues that exist today. With links to many areas of study, Translation in the Digital Age is a vital read for students of modern languages, translation studies, cultural studies and applied linguistics.

Translation-mediated Communication in a Digital World Minako O'Hagan, David Ashworth, 2002 The Internet is accelerating globalization by exposing organizations and individuals to global audiences. This in turn is driving teletranslation and teleinterpretation, new types of multilingual support, which are functional in digital communications environments. The book describes teletranslation and teleinterpretation by exploring a number of key emerging contexts for language professionals.

Crowdsourcing and Online Collaborative Translations Miguel A. Jiménez-Crespo, 2017-04-11 Crowdsourcing and online collaborative translations have emerged in the last decade to the forefront of Translation Studies as one of the most dynamic and unpredictable phenomena that has attracted a growing number of researchers. The popularity of this set of varied translational processes holds the potential to reframe existing translation theories, redefine a number of tenets in the discipline, advance research in the so-called "technological turn" and impact public perceptions on translation. This book provides an interdisciplinary analysis of these phenomena from a descriptive and critical perspective, delving into industry approaches and fostering inter and intra disciplinary connections between areas in which the impact is the greatest, such as cognitive translatology, translation technologies, quality and translation evaluation, sociological approaches, text-linguistic approaches, audiovisual translation or translation pedagogy. This book is of special interest to translation researchers, translation students, industry experts or anyone with an interest on how crowdsourcing and online collaborative translations relate to past, present and future research and theorizations in Translation Studies.

Becoming a Translator Douglas Robinson, 2019-12-06 Fusing theory with advice and information about the practicalities of translating, Becoming a Translator is the essential resource for novice and practicing translators. The book explains how the market works, helps translators learn how to translate faster and more accurately,

as well as providing invaluable advice and tips about how to deal with potential problems, such as stress. The fourth edition has been revised and updated throughout, offering: a whole new chapter on multimedia translation, with a discussion of the move from intersemiotic translation to audiovisual translation, media access and accessibility studies new sections on cognitive translation studies, translation technology, online translator communities, crowd-sourced translation, and online ethnography tweetstorms capturing the best advice from top industry professionals on Twitter student voices, especially from Greater China Including suggestions for discussion, activities, and hints for the teaching of translation, and drawing on detailed advice from top translation professionals, the fourth edition of *Becoming a Translator* remains invaluable for students and teachers of Translation Studies, as well as those working in the field of translation.

Problem solving activities in post-editing and translation from scratch Jean Nitzke, Companies and organisations are increasingly using machine translation to improve efficiency and cost-effectiveness, and then edit the machine translated output to create a fluent text that adheres to given text conventions. This procedure is known as post-editing. Translation and post-editing can often be categorised as problem-solving activities. When the translation of a source text unit is not immediately obvious to the translator, or in other words, if there is a hurdle between the source item and the target item, the translation process can be considered problematic. Conversely, if there is no hurdle between the source and target texts, the translation process can be considered a task-solving activity and not a problem-solving activity. This study investigates whether machine translated output influences problem-solving effort in internet research, syntax, and other problem indicators and whether the effort can be linked to expertise. A total of 24 translators (twelve professionals and twelve semi-professionals) produced translations from scratch from English into German, and (monolingually) post-edited machine translation output for this study. The study is part of the CRITT TPR-DB database. The translation and (monolingual) post-editing sessions were recorded with an eye-tracker and a keylogging program. The participants were all given the same six texts (two texts per task). Different approaches were used to identify problematic translation units. First, internet research behaviour was considered as research is a distinct indicator of problematic translation units. Then, the focus was placed on syntactical structures in the MT output that do not adhere to the rules of the target language, as I assumed that they would cause problems in the (monolingual) post-editing tasks that would not occur in the translation from scratch task. Finally, problem indicators were identified via different parameters like Munit, which indicates how often the participants created and modified one translation unit, or the inefficiency (InEff) value of translation units, i.e. the number of produced and deleted tokens divided by the final length of the translation. Finally, the study highlights how these parameters can be used to identify problems in the translation process data using mere keylogging data.

The Translator's Handbook Morry Sofer, 2006 Since 1997, this translator's guide has been the worldwide leader in its field and has elicited high praise from some of the world's best translators. It has been fully updated in the 2006 edition.

A Career in Language Translation Carline Féraillieur-Dumoulin, 2009 This book is a must-have for anyone interested in language translation. It is a valuable tool for those looking to embark on a translation career and those already in the field. Faculty members teaching translation courses, current and graduate students and translation business owners will undoubtedly find this book to be an indispensable resource. It serves as a guide and reference material for the language professionals seeking to hone their skills, sell their services, generate more revenues, equip themselves with the tools necessary to ultimately excel in the field. It contains a wealth of information and reference on how to develop a translation career. If you are interested in entering the field and do not know how to start, you will most certainly find your answer in this book. The book also covers everything from preparing your resume, preparing your business cards, working as a freelance translator, as an in-house translator, for an International Organization or for the Federal Government, to running your own translation business. It also arms you with information on how to market your services, how to beware of Internet Scams targetted at professional translators and interpreters, how to address payment issues, among other things. This book even covers the legal aspect involved in language translation. Towards the end section of the book, the reader will be able to refer to a concise glossary as well as to a list of International Organizations hiring language professionals, a list of Translation and Interpretation Schools in the United States and Abroad, and also to a list of Professional Translation and Interpretation Organizations in the United States and Abroad. This compilation of years of experience and research by the author will provide the reader with the materials, tools and resources that will contribute to a successful career in language translation.

Corpus Use and Translating Allison Beeby, Patricia Rodríguez Inés, Pilar Sánchez-Gijón, 2009-03-11 Professional translators are increasingly dependent on electronic resources, and trainee translators need to develop skills that allow them to make the best use of these resources. The aim of this book is to show how CULT (Corpus Use for Learning to Translate) methodologies can be used to prepare learning materials, and how novice translators can become autonomous users of corpora. Readers interested in translation studies, translator training and corpus linguistics will find the book particularly useful. Not only does it include practical, technical advice for using and learning to use corpora, but it also addresses important issues such as the balance between training and education and how CULT methodologies reinforce student autonomy and responsibility. Not only is this a good introduction to CULT, but it also incorporates the latest developments in this field, showing the advantages of using these methodologies in competence-based learning.

Translation in the Digital Age Carsten Sinner, 2020-06-29 Translation, interpreting and translatology face major challenges today, as new technologies provide new ways of investigating our profession, analysing the process of performing these acts of linguistic mediation, or the outcome of our work, and even permit a fresh look at old data. However, aside from a certain improvement in terms of research possibilities, what else does the future hold for translation and interpreting? This volume proposes the label Translation 4.0, suggesting that contemporary translation should actually be understood as programmatic as expressions such as Industry 4.0 and Internet 4.0, which are often used to refer to the increasing application of Internet technology to facilitate communication between humans, machines and products. As the book shows, Translation 4.0 is at least undergoing a process of formation, if it is not already fully developed. The contributions here not only look into developments in translation and interpreting per se, but also explore the consequences of digitalisation for research in this field.

Translation and Web Localization Miguel A. Jimenez-Crespo, 2013-11-07 Web localization is a cognitive, textual, communicative and technological process by which

interactive web texts are modified to be used by audiences in different sociolinguistic contexts. Translation and Web Localization provides an in-depth and comprehensive overview into this emerging field of study. The book covers the key areas and main theoretical and practical approaches of the subject, rather than a step by step practical guide. Topics covered include the often controversial definition of localization, how the process develops, what constitutes a text in this process, digital genre theory and its implications, and how to conduct research or training in this field. The book concludes with a look into the dynamic nature of web localization and the forces, such as crowdsourcing, that are reshaping web localization and translation as we know it. In light of the deep changes brought by the Internet, Translation and Web Localization is an indispensable book for researchers, postgraduate and advanced undergraduate students of translation studies, as well as practitioners and researchers in related fields such as computational linguistics, applied linguistics, Internet linguistics, digital genre theory and web development.

Translation-Driven Corpora Federico Zanettin, 2014-04-08 Electronic texts and text analysis tools have opened up a wealth of opportunities to higher education and language service providers, but learning to use these resources continues to pose challenges to scholars and professionals alike. Translation-Driven Corpora aims to introduce readers to corpus tools and methods which may be used in translation research and practice. Each chapter focuses on specific aspects of corpus creation and use. An introduction to corpora and overview of applications of corpus linguistics methodologies to translation studies is followed by a discussion of corpus design and acquisition. Different stages and tools involved in corpus compilation and use are outlined, from corpus encoding and annotation to indexing and data retrieval, and the various methods and techniques that allow end users to make sense of corpus data are described. The volume also offers detailed guidelines for the construction and analysis of multilingual corpora. Corpus creation and use are illustrated through practical examples and case studies, with each chapter outlining a set of tasks aimed at guiding researchers, students and translators to practice some of the methods and use some of the resources discussed. These tasks are meant as hands-on activities to be carried out using the materials and links available in an accompanying DVD. Suggested further readings at the end of each chapter are complemented by an extensive bibliography at the end of the volume. Translation-Driven Corpora is designed for use by teachers and students in the classroom or by researchers and professionals for self-learning. It is an invaluable resource for anyone interested in this fast growing area of scholarly and professional activity.

A Practical Guide to Localization Bert Esselink, 2000 Translation technology has evolved quickly with a large number of translation tools available. In this revised addition, much content has been added about translating and engineering HTML and XML documents, multilingual web sites, and HTML-based online help systems. Other major changes include the addition of chapters on internationalization, software quality assurance, desktop publishing and localization support. There is a focus on translators who want to learn about localization and translation technology.

Translation and Technology Chiew Kin Quah, 2006-04-12 Chiew Kin Quah draws on years of academic and professional experience to provide an account of translation technology, its applications and capabilities. Major developments from North America, Europe and Asia are described, including developments in uses and users of the technology.

Found in Translation Nataly Kelly, Jost Zetzsche, 2012-10-02 Translation. It's everywhere we look, but seldom seen—until now. Found in Translation reveals the surprising and complex ways that translation shapes the world. Covering everything from holy books to hurricane warnings and poetry to peace treaties, Nataly Kelly and Jost Zetzsche offer language lovers and pop culture fans alike an insider's view of the ways in which translation spreads culture, fuels the global economy, prevents wars, and stops the outbreak of disease. Examples include how translation plays a key role at Google, Facebook, NASA, the United Nations, the Olympics, and more.

The Translator's Handbook Morry Sofer, 2004 A practical guide for translators in all languages, including information on all areas of translation and extensive indices of dictionaries, translation work sources, education programs, translation on the Internet, and more.

Overview of Translation Tools - Benefits of Translation Memory Management Software for an International Company Marina Carrillo, 2007-07-07 Diploma Thesis from the year 2007 in the subject Computer Science - Software, grade: 2,3, University of Applied Sciences Ansbach, 60 entries in the bibliography, language: English, abstract: "TRANSLATION is very much like copying paintings." These are the words of Boris Pasternak (1890-1960), a Russian Poet, Novelist and Translator. The key to translation is not only understanding and being fluent in more than one language and having an understanding of language and culture, but also being able to convey the meaning of the text in one language into the other. However, just the knowledge of different languages is not enough to succeed in the competing world scene of translation. Through the immense development of the Internet, information technology, and ongoing globalization, "translation complexity takes a quantum leap" and forces today's translators to use computer technology, advanced software applications, and computer-aided translation tools to meet enhanced translation requirements in a timely manner. In order to be successful translator in today's fast turn around times, the knowledge of and skills in different translation facilitating programs are essential. Translation is a difficult process, which requires computer and software skills in addition to proficiency. The translation business is quickly becoming one of the fastest growing markets in the world, and as a result, translators must develop efficiencies in their processes to meet the increasing demand and to be able to offer competitively priced services. The purpose of this thesis is to analyze the major translation tools available in the marketplace and to illustrate how they benefit the translator in multiple ways. This thesis will combine the essential knowledge of these different software tools and provide the important criteria required to choose the appropriate foreign language translation software.
