American Tropics Megan Raby,2017-10-03 Biodiversity has been a key concept in international conservation since the 1980s, yet historians have paid little attention to its origins. Uncovering its roots in tropical fieldwork and the southward expansion of U.S. empire at the turn of the twentieth century, Megan Raby details how ecologists took advantage of growing U.S. landholdings in the circum-Caribbean by establishing permanent field stations for long-term, basic tropical research. From these outposts of U.S. science, a growing community of American tropical biologists developed both the key scientific concepts and the values embedded in the modern discourse of biodiversity. Considering U.S. biological fieldwork from the era of the Spanish-American War through the anticolonial movements of the 1960s and 1970s, this study combines the history of science, environmental history, and the history of U.S.-Caribbean and Latin American relations. In doing so, Raby sheds new light on the origins of contemporary scientific and environmentalist thought and brings to the forefront a surprisingly neglected history of twentieth-century U.S. science and empire.

France and the American Tropics to 1700 Philip P. The Tropics And the Traveling Gaze David Arnold,2006 Offers a new interpretation of the history of colonial India and a critical contribution to the understanding of environmental history and the tropical world. Arnold considers the ways in which India's material environment became increasingly subject to the colonial understanding of landscape and nature, and to the scientific scrutiny of itinerant naturalists.

Geomorphology of the Tropics Alfred Wirthmann,2013-04-17 Geomorphological research in the humid to seasonal tropics has primarily concentrated on the most characteristic landform assemblage of this zone, namely that of stepped, largely undissected etchplains, often dotted with inselbergs and cutting across ancient basement rocks. Although the author discusses extensively this subject, he puts particular emphasis on the differences of chemical weathering and land-forming processes on rocks of various lithology and structure. This contrast becomes most evident, when comparing the highly resistant quartzitic sediments often covering the basement rocks with the easily weathered volcanics, e.g. the Deccan traps of India. The book was first published in German in 1987. However, the present version is much more than a translation, encompassing a range of new ideas and findings in the field of tropical geomorphology. The number of maps and illustrations has also been increased.

Conservation Biology Navjot S. Sodhi,Luke Gibson,Peter H. Raven,2013-07-03 The late Navjot Sodhi conceived this book as a way of bringing to the forefront of our conservation planning for the tropics the views of people who were actually working and living there. In its 31 chapters, 55 authors present their views on the conservation problems they face and how they deal with them. Effective long term conservation in the tropics requires the full participation of local people, organizations and governments. The human population of tropical countries is expected to grow by more than 2.5 billion people over the next several decades, with expectations of increased consumption levels growing even more rapidly than population levels; clearly there will be a need for more trained conservationists and biologists. Significant levels of local involvement are essential to conservation success, with the rights of local people fully recognized, protected and fostered by governmental and international assistance. Overarching conservation plans are necessary, but cannot in themselves lead to success. The individual experiences presented in the pages of this book will provide useful models that may serve to build better and more sustainable lives for the people who live in the tropics and lead to the continued survival of as many species and functioning ecosystems as possible.

Business, Industry, and Trade in the Tropics Jacob Wood,Taha Chaiechi,K Thirumaran,2022-03-22 The tropics is an area of enormous opportunity and potential. The countries situated between the Tropics of Cancer and Capricorn are largely developing in nature. There is huge interest in the types of business investments made in Southeast Asia, Central Africa, and the Amazonian tropical belts. These tropical regions continue to face opportunities and challenges in attracting foreign direct investments as well as the need to complement and/or compete with larger economies external to the tropics. This book provides an empirical assessment of the key sociocultural, economic, environmental, and political factors that influence the business dynamics of organizations operating within the tropics. It will address but is not limited to topics such as attracting businesses to the tropics, facilitating smooth, stable conditions for business operations and sustainability, national institutions, and regulations that shape the way business is done, and the increasing deployment of new technologies and entrepreneurial innovations which are defining the global tropics as a distinct business region. It will offer readers a key focus for developing a deeper understanding of the factors and frameworks that influence and shape business activity in the area. While the primary audience for the book consists of academics and students from the fields of economics (environmental economics, developmental economics), business, international trade, tourism, and area studies, it will also provide a practical resource for government policy analysts wanting to fully appreciate some of the key economic and business issues facing the region.

Tales from the Torrid Zone Alexander Frater,2011-06-15 Alexander Frater was born to a family of Scottish expatriates on the tiny island of Irikiki in the South Seas. Following his dreams of being a writer, Frater left home, but the call of the tropics compelled him to return again and again. Join him as he dines with the Queen of Tonga; makes his way through two civil wars; visits the spots where surfing and bungee jumping originated; and expresses his love for the region where he is at once a tourist, explorer, adventurer, and native son. From Tahiti to Thailand, Mexico to Mozambique,

Frater gives us a richly described, endlessly surprising picture of this diverse, feverish, languorously beautiful world.

Observations of Surface to Atmosphere Interactions in the Tropics Michael Garstang,David Roy Fitzjarrald,1999 Called the firebox of the atmosphere, the tropics absorb more energy from the Sun than they lose through longwave emissions; this excess energy activates processes in the temperate and polar regions of the Earth. This book documents the historical evolution of concepts which describe the complex interactions of scales of motion which connect the surface, mixed, and cloud layers to the deeper atmosphere of the tropics. Thermodynamic and kinematic consequences of these transfers of energy are extended to the geochemical and living worlds.

Tillage Systems in the Tropics R. Lal,Food and Agriculture Organization of the United Nations,1995 The objectives of this Bulletin are to collate up-to-date information on soil tillage requirements for soils in the tropics; to assess the impacts of different ways of tillage on soil, environment and crop productivity; and to outline criteria for developing environment-friendly and economically viable tillage techniques for sustainable use of soil and water resources

Environmental Management in the Tropics Randall Baker,2021-06-24 The arrival of western science and economic interests to the tropics has dramatically changed the tropical environment and its ecology. Environmental Management in the Tropics discusses the ecology of the tropics and examines how it is different from the temperate zone where western science evolved. The author discusses how native people traditionally subsisted in different ecological zones of the tropics and how they rationalized their relationship. The author also takes a critical look at the impact of colonialism in the tropics and how it changed traditional cultures and their relationship with the environment. The current clash between economics and ecology in the tropics is explored in depth. According to the author, we are now able to draw a line in the sand and illustrate the consequences of continuing current practices. Environmental Management in the Tropics shows how this situation developed and discusses how the two opposing concepts must be brought back into harmony. The book is one of the few studies to take a truly interdisciplinary approach combining the serious inevitabilities of natural science with the variables of history, culture, politics, and economics. It gives us a new respect for the past and tradition of the tropics and clearly spells out why dramatic changes must occur to prevent further degradation of the tropical environment. Environmental Management in the Tropics is an important reference for ecologists, conservationists, scientists, researchers, environmental consultants, land managers and developers, members of the world regulatory community, and anyone working on projects in tropical regions.

An Eye for the Tropics Krista A. Thompson,2007-03-15 Images of Jamaica and the Bahamas as tropical paradises full of palm trees, white sandy beaches, and inviting warm water seem timeless. Surprisingly, the origins of those images can be traced back to the roots of the islands’ tourism industry in the 1880s. As Krista A. Thompson explains, in the late nineteenth century, tourism promoters, backed by British colonial administrators, began to market Jamaica and the Bahamas as picturesque “tropical” paradises. They hired photographers and artists to create carefully crafted representations, which then circulated internationally via postcards and illustrated guides and lectures. Illustrated with more than one hundred images, including many in color, An Eye for the Tropics is a nuanced evaluation of the aesthetics of the “tropicalizing images” and their effects on Jamaica and the Bahamas. Thompson describes how representations created to project an image to the outside world altered everyday life on the islands. Hoteliers imported tropical plants to make the islands look more like the images. Many prominent tourist-oriented spaces, including hotels and famous beaches, became off-limits to the islands’ black populations, who were encouraged to act like the disciplined, loyal colonial subjects depicted in the pictures. Analyzing the work of specific photographers and artists who created tropical representations of Jamaica and the Bahamas between the 1880s and the 1930s, Thompson shows how their images differ from the English picturesque landscape tradition. Turning to the present, she examines how tropicalizing images are deconstructed in works by contemporary artists—including Christopher Cozier, David Bailey, and Irénée Shaw—at the same time that they remain a staple of postcolonial governments’ vigorous efforts to attract tourists.
