Mitch Ratcliffe, Steve Mack

Video Recording Technology Aaron Foisi

Nmungwun,2012-11-12 Video recording has recently become an important phenomenon. Although the majority of American homes have at least one video recording set, not much is known about video recording's past and about its continual effect on affiliated industries. This text documents the history of magnetic recording, stressing its importance in consumer as well as commercial applications from the advent of magnetism through the invention of such new technologies as Digital Audio Tape (DAT), High Definition Television (HDTV), and a multitude of sophisticated Digital Video Cassette Recorders.

Understanding Motion Capture for Computer Animation Alberto Menache,2011-01-24 Understanding Motion Capture for Computer Animation discusses the latest technology developments in digital design, film, games, medicine, sports, and security engineering. Motion capture records a live-motion event and translates it into a digital context. It is the technology that converts a live performance into a digital performance. In contrast, performance animation is the actual performance that brings life to the character, even without using technology. If motion capture is the collection of data that represents motion, performance animation is the character that a performer represents. The book offers extensive information about motion capture. It includes state-of-the-art technology, methodology, and developments in the current motion-capture industry. In particular, the different ways to capture motions are discussed, including using cameras or electromagnetic fields in tracking a group of sensors. This book

will be useful for students taking a course about digital filming, as well as for anyone who is interested in this topic. Completely revised to include almost 40% new content with emphasis on RF and Facial Motion Capture Systems Describes all the mathematical principles associated with motion capture and 3D character mechanics Helps you budget by explaining the costs associated with individualized motion capture projects

Background Modeling and Foreground Detection for Video Surveillance Thierry Bouwmans, Fatih Porikli, Benjamin Höferlin, Antoine Vacavant, 2014-07-25 Background modeling and foreground detection are important steps in video processing used to detect robustly moving objects in challenging environments. This requires effective methods for dealing with dynamic backgrounds and illumination changes as well as algorithms that must meet real-time and low memory requirements. Incorporating both established and new ideas, Background Modeling and Foreground Detection for Video Surveillance provides a complete overview of the concepts, algorithms, and applications related to background modeling and foreground detection. Leaders in the field address a wide range of challenges, including camera jitter and background subtraction. The book presents the top methods and algorithms for detecting moving objects in video surveillance. It covers statistical models, clustering models, neural networks, and fuzzy models. It also addresses sensors, hardware, and implementation issues and discusses the resources and datasets required for evaluating and comparing background subtraction algorithms. The datasets and codes used in the text, along with links to software demonstrations, are available on the book's website. A one-stop resource on up-to-date models, algorithms, implementations, and benchmarking techniques, this book helps researchers and industry developers understand how to apply background models and foreground detection methods to video surveillance and related areas, such as optical motion capture, multimedia applications, teleconferencing, video editing, and

human-computer interfaces. It can also be used in graduate courses on computer vision, image processing, real-time architecture, machine learning, or data mining.

Design, Implementation, and Performance of a Scalable Multi- Camera Interactive Video Capture System Martin Frankel,Jon A. Webb,1995 Abstract: We describe a system for interactive, real time, multi-camera video capture and display. The system uses largely general purpose, programmable hardware, and as a result is flexible and expandable. The computational framework and data storage is provided by the iWarp parallel computer, which we describe in light of the performance requirements of real time video. Video display is accomplished using a High Performance Parallel Interface network to write to a high resolution frame buffer. Video can be displayed as it is captured, with only a single frame latency. We provide interactivity with a VCR-like graphical interface running on a host workstation, which in turn controls the operation of the capture system. As a whole, this system allows a user to interactively

monitor, capture, and replay video with the ease of use of a VCR, yet with flexibility and performance that is unavailable in all but the most expensive digital VCRs. We describe the implementation in detail, and discuss possible future enhancements.
