3d Videophone for Immersive Communication Nor Azhar Mohd Arif,Hafizal Mohamad,2010-05 The concept of 3D videophone is proposed to realise video communication that is closer to natural face-to-face conversation. Human visual interface evaluations are conducted to confirm the display choice for the visual information presentation and the suitable terminal configuration for the system core hardware. The results show that 3D display is preferred over the conventional 2D display as the visual information representation actuator due to closeness to natural face-to-face conversation. On the other hand, a laptop PC type terminal is chosen as the 3D videophone core hardware since sufficient level of eye contact can be maintained during video communication. Evaluation of the degradation and delay of audio and 3D visual signals due to ATM network impairments is performed to verify the suitability of ATM network for handling the transmission of 3D videophone signals. The effects of the impairments are evaluated by comparison between unimpaired and impaired signals. The results demonstrate that ATM network impairments effects at the ITU-T ATM performance objective values on the signals still able to maintain good quality of 3D video.

With more than 600 entries, this resource uses a Total Survey Error perspective that considers all aspects of possible survey error from a cost-benefit standpoint.

Disability Research Today Tom Shakespeare,2015-03-05 Grouped around four central themes – illness and impairment, disabling processes, care and control, and communication and representations – this collection offers a fresh perspective on disability research, showing how theory and data can be brought together in new and exciting ways. Disability Research Today starts by showing how engaging with issues around illness and impairment is vital to a multidisciplinary understanding of disability as a social process. The second section explores factors that affect disabled people, such as homelessness, violence and unemployment. The third section turns to social care, and how disabled people are prevented from living with independence and dignity. Finally, the last section examines how different imagery and technology impacts our understandings of disability and deafness. Showcasing empirical work from a range of countries, including Japan, Norway, Italy, Australia, India, the UK, Turkey, Finland and Iceland, this collection shows how disability studies can be simultaneously sophisticated, accessible and policy-relevant. Disability Research Today is suitable for students and researchers in disability studies, sociology, social policy, social work, nursing and health studies.

Introduction to SNG and ENG Microwave Jonathan Higgins,2013-07-31 An excellent primer on the subject, this book gives beginning professionals in satellite newsgathering an introduction to the technologies and processes involved. It will also suit journalists, editors and producers needing to

understand this important element of the newsgathering chain. Written for the complete beginner, the book shows how typical transmission chains work and their communication with the studio. It also offers a brief introduction to analogue and digital theory before going on to explain Electronic Newsgathering (ENG) systems: from basic principles: transmission and reception chains, frequencies used and why, through to audio channel, subcarriers and digital modulation, as well as applications: radio cameras, window links, infra-red & laser links. A brief chapter on satellite theory gives an overview of satellite communication and orbits, basic satellite communication theory, transportables ('flyaways') and trucks, as well as analogue vs digital issues, digital compression and MPEG. Systems regulations and operations are also introduced as well as safety and logistics issues. If you're looking for a quick and easy introduction to the subject, this book will act as an essential on the job reference guide.

Growing Up with Science ,2006 Volume fifteen of a seventeen-volume, alphabetically-arranged encyclopedia contains approximately five hundred articles introducing key aspects of science and technology.

Visions of Innovation Martin Fransman,Professor of Economics and Director of the Institute for Japanese-European Technology Studies (JETS) Martin Fransman,1999-05-13 Computers, telecommunications equipment, semiconductorthe products and technologies of the information and communications industry (IC)have transformed our world. Most of these products were initially developed in Western countries, but by the early 1990s some of the world's largest companies in the field were Japanese. This book explains the resurgence of Japan's IC giants, their global status, and their strengths and weaknesses.Empirical scrutiny of their evolution iscomplemented by the author's own theory of the most appropriate method for studying the dynamics of industrial change.The author argues that in order to understand the evolution of IC companies and industries, it is necessary to create a theory of the firm capable of encompassing the development of real firms in the real world in

real time. This approach stresses the importance of the beliefs that are constructed in the firm under conditions of 'interpretive ambiguity', which guide the firm's decisions and its reactions to new technologies. Lengthy analyses of NEC and NTT (by far the world's largest company in terms of market value; its future currently under government scrutiny), and of the computing, switching, and optical fibre industries, illustrate these concepts. Based on over 600 interviews over eight years with Japanese leaders, this book provides important new material on the past, present, and future of Japanese industry.

Satellite Newsgathering Jonathan Higgins, 2012-08-06 Praise for the first edition: It is a wonderful source of information and has the merit of going straight to the subject, being technically precise although very easy to understand. There are numerous pictures, photographs, diagrams, which make the reading a real pleasure. --European Broadcasting Union Technical Review The complexity of a satellite newsgathering system could be a four-month long college course with a high tuition rate and an enrolment number so large you have to watch your professor on a TV screen. Jonathan Higgins might have saved the independent learner a few attendance point deductions by fitting it into one book. --Satellite Broadband magazine An ideal introduction for anyone working, or interested, in satellite newsgathering (SNG). The new edition of this popular book builds upon the success of the first--an important and valuable work that is extremely easy to read, comprehensive in its treatment, and detailed where necessary. SNG used to be an immensely complex and expensive affair where broadcasting organizations were at the mercy of an expert who sat in a lonely corner, until needed. Things have changed--everyone in a global news organization needs to know about it now. This is not only because of the high costs of mistakes, but because now even non-technical journalists on the ground have to operate their own equipment. Learn the skills, basics of equipment, cutting edge technology and critical safety issues of satellite newsgathering.
