**Wan's Clinical Application of Chinese Medicine** Giorgio Repeti, 2011-08-15 Much of acupuncture practice in the West remains incomplete or less potent because it has been based upon particular interpretations often by only one individual, in translation. The broad, diverse and ancient practices of Chinese medicine are often misconstrued and overshadowed by the more modern Traditional Chinese Medicine in Westernised texts. This book places more powerful

tools in the hands of practitioners and expands our knowledge of the full potential of Chinese medical practices. Grandmaster Wan was a well known doctor of Chinese medicine, who in the traditional way of Chinese teaching took on only a handful of students throughout his life, one of whom was Giorgio Repeti. The author's extensive notes, derived from his years of discipleship to Grandmaster Wan, form the basis of this book, and he has in the core of the book resisted any temptation to include his own views or amend those of the teacher. The approach described was characterised by Grandmaster Wan as the 3E approach (easy, economical and efficient), and is deceptively simple. It is, however, an approach that can only fully be comprehended through reflection and experience. The book covers the basic principles of diagnosis, with chapters on pulse and tongue diagnosis. A key chapter on acupuncture provides clear directives for treatment that relies on simple yet powerful underpinning principles, and challenges the much more complex approach to acupuncture commonly taught in the West. Herbal medicines and herbal treatments for cold, warm and hot diseases are also covered. This clinically based text will provide an essential vademecum for practitioners of Chinese medicine, and a thoughtful introduction for students that will carry them through to their own practice.

**Introduction to Data Networks** Lawrence Harte,2006 Data networks are telecommunications networks that are installed and operated for information exchange between data communication devices such as computers and voice gateways. Although data networks can transfer any type of digital media (voice, data or video), the type of network, services used and optional configurations can dramatically affect the performance of data services. This book provides a functional description of the key data network parts including hubs, routers, bridges and gateways. You will discover the differences between personal area networks (PANs), premises distribution networks (PDNs), local area networks (LANs), metropolitan area networks (MANs), and wide area networks (WANs). The basic operation of Ethernet is provided along with how Ethernet has evolved and the different types of Ethernet systems that are available today. Discover how data networks are configured and managed using simple network management protocol (SNMP). Learn the basic operation of gateways and firewalls and how firewalls operate to protect networks from the unwanted transmission of information. **Application Acceleration and WAN Optimization Fundamentals** Ted Grevers, Joel Christner, 2008 IT organizations face pressure to increase productivity, improve application performance, support global collaboration, improve data protection, and minimize costs. In today's WAN-centered environments, traditional LAN-oriented infrastructure approaches are insufficient to meet these goals. Application Acceleration and WAN Optimization Fundamentals

introduces a better solution: integrating today's new generation of accelerator solutions to efficiently and effectively scale networks beyond traditional capabilities while improving performance and minimizing costs through consolidation. Ted Grevers and Joel Christner begin by reviewing the challenges network professionals face in delivering applications to globally distributed workforces. You learn how accelerators are transforming application business models, enabling IT departments to centralize and consolidate resources while also delivering consistently superior performance. Grevers and Christner show how to identify network consumers, prioritize traffic, and guarantee appropriate throughput and response times to business-critical applications. You learn how to use quality of service techniques such as packet classification and marking and traffic policing, queuing, scheduling, and shaping. Next, you compare options for integrating accelerators and optimization services into your network and for optimizing content delivery. The authors show how to address application protocol-related performance problems that cannot be resolved through compression or flow optimization alone. In the final chapter, the authors walk you through several real-world scenarios for utilizing accelerator technology. Ted Grevers, Jr., is the solution manager for the Cisco® Video IPTV Systems Test and Architecture (C-VISTA) team. He has extensive experience in the content delivery network (CDN) market, focusing on enterprise and service provider content delivery and application optimization needs. Joel Christner, CCIE® No. 15311, is the manager of technical marketing for the Cisco Application Delivery Business Unit (ADBU). He has extensive experience with application protocols, acceleration technologies, LAN/WAN infrastructure, and storage networking. Grevers and Christner are key contributors to the design and architecture of Cisco application delivery and application acceleration solutions.
