Severe Weather Warnings: An Interdisciplinary Approach William Donner, Havidan Rodriguez, Jerald Brotzge, Walter R. Diaz, 2022-08-24 This book offers a comprehensive description and analysis of natural hazard warnings, drawing on perspectives from the social sciences, physical sciences, and interdisciplinary fields such as disaster studies to articulate a distinction between traditional warnings and what might be called interdisciplinary warnings. Traditional warnings approach warning technology, design, and application from a principally scientific and technical perspective. Human factors, while considered, often are of secondary concern. Interdisciplinary warnings, on the other hand, maintain a critical emphasis on the technical merits of warning systems, but also ask, "Will psychological and community factors such as culture and structure shape how the system is used, and, if so, can this information be incorporated into system design preemptively to make it more effective?" Given the absence of systematic work on interdisciplinary warnings, a book-length monograph discussing and synthesizing knowledge from the various fields focused on warnings and warning response is of critical importance to both academics and practitioners. Broadly conceived, the book presents readers with an in-depth overview of warnings, interdisciplinary research, and interdisciplinary collaboration. The book holds appeal for a very broad audience: scholars; practitioners; and academic, vocational, and technical instructors both in University and non-University settings. It is of interest to academic scholars due to the interdisciplinary treatment of warnings as well as the general presentation of up-to-date scholarship on warning theory. Additionally, scholars interested in interdisciplinary work in general and those focusing on disaster warnings find within the volume a framework for developing collaborative research partnerships with those from other disciplines. As well, the book offers practitioners --emergency managers, mitigation specialists, planners, etc. --a more comprehensive perspective on emergency response in practice, allowing for better development and application of warning policy. Finally, the book appeals to instructors both inside and outside the academy. The authors envision the book useful to professors teaching both graduate and undergraduate-level courses in Sociology of Disaster, Emergency Management Planning, Homeland Security, Disaster Response, Disaster Mitigation, and Business Continuity and Crisis Management. A robust market also exists among professional organizations, perhaps most notably FEMA, which offers countless online and in-person training courses via the National Training Program, Emergency Management Institute (EMI), and other venues.

Storm Warning Pauline Halford, 2005-01-01 Imagine a world without the weather forecast. Is it likely to be warm and sunny for the fete at the weekend? Will Thursday be a good day to make that ferry crossing, or would Friday be better? We might scorn it and deride it, but we still consult the men - and women - from the Met Office, rather than a piece of soggy seaweed, before deciding whether to set out with a brolly in the morning. More than one hundred and fifty years the best forecast available was the weather glass with its imprecise predictions of 'Fair' or 'Changeable'. Before that, man consulted the animals in the fields, the birds in the sky, clouds, insects, the moon - even astrologers, oracles and the ancient gods. The tale of the emergence of forecasting from mythology, through the weather glass and into meteorology is a story fraught with conflict between scientists and seers. It involves the riding of storms; the scouring of the wide oceans in small sailing ships and soaring to the sky in balloons. This book traces the story of man's attempts to foretell the coming weather, and shows how weather prediction emerged from the realms of the seer and charlatan into credible acceptability. of the weather forecast; 2004 is the 150th anniversary of the establishment of the Met office; 2004 is also the 50th anniversary of the first TV weather forecast; and foreward by Michael Fish.

Emergency Alert System (EAS) and All-Hazard Warnings Linda K. Moore, 2011-04 The Emergency Alert System (EAS) is built on a structure conceived in the 1950s when over-the-air broadcasting was the best-available technol. for widely disseminating emergency alerts. It is one of several federally managed warning systems. The NOAA/NWS weather radio system has been upgraded to an all-hazard warning capability. The Dept. of Homeland Security is implementing a program that will disseminate nat. alert messages over digital broadcast airwaves, using satellite and public TV broadcast towers. This program is called the Integrated Public Alert and Warning System (IPAWS). Contents of this report: EAS Admin.; NOAA Weather Radio; All-Hazard Warning Tech.; Public Alert Warning System: The WARN Act. A print on demand report.

Emergency Alert and Warning Systems National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the Future of Emergency Alert and Warning Systems: Research Directions, 2018-04-19 Following a series of natural disasters, including Hurricane Katrina, that revealed shortcomings in the nation's ability to effectively alert populations at risk, Congress passed the Warning, Alert, and Response Network (WARN) Act in 2006. Today, new technologies such as smart phones and social media platforms offer new ways to communicate with the public, and the information ecosystem is much broader, including additional official channels, such as government social media accounts, opt-in short message service (SMS)-based alerting systems, and reverse 911 systems; less official channels, such as main stream media outlets and weather applications on connected devices; and unofficial channels, such as first person reports via social media. Traditional media have also taken advantage of these new tools, including their own mobile applications to extend their reach of beyond broadcast radio, television, and cable. Furthermore, private companies have begun to take advantage of the large amounts of data about users they possess to detect

events and provide alerts and warnings and other hazard-related information to their users. More than 60 years of research on the public response to alerts and warnings has yielded many insights about how people respond to information that they are at risk and the circumstances under which they are most likely to take appropriate protective action. Some, but not all, of these results have been used to inform the design and operation of alert and warning systems, and new insights continue to emerge. Emergency Alert and Warning Systems reviews the results of past research, considers new possibilities for realizing more effective alert and warning systems, explores how a more effective national alert and warning system might be created and some of the gaps in our present knowledge, and sets forth a research agenda to advance the nation's alert and warning capabilities.
